

ENVIRONMENTAL POLICY

Last Update 07/2021

CMPC Companies is a multinational company with more than 100 years of history. It aims to meet people's most genuine needs by making and selling products from certified plantations under sustainable forest management, such as lumber, wood pulp, packaging, paper, tissue and personal care products.

Our business strategy is focused on sustainable results while seeking environmental protection, top financial performance and simultaneously creating shared value for our stakeholder groups. The foregoing means having impeccable operations based on a long-term culture of prevention that minimizes and mitigates the environmental impacts of our activities, products and services and also meets our environmental sustainability goals beyond merely legislative and regulatory compliance.

This Environmental Policy covers all of the business areas, subsidiaries and countries where CMPC operates. Furthermore, we encourage its fulfillment by all third parties with whom we interact, namely contractors, providers, service companies, business partners and customers.

Given the foregoing, at CMPC Companies:

- 1** We believe in the concrete application of the sustainable development principle. We aim to harmonize the pursuit of our current productive activities with the legitimate right of future generations to satisfy their own needs.

- 2** We believe in the ethical concept contained in environmental protection. Strict compliance with the current environmental regulatory framework is our duty, as well as consistent tracking of best practices and regulatory trends.
- 3** We promote the inclusion of environmental sustainability variables as an integral part of decision-making at our forest and industrial operations. We have the responsibility to identify and manage positive and negative impacts that our activities, products and services may have on neighboring communities and ecosystems, their functioning and biodiversity.
- 4** We are committed to conducting all activities with the highest levels of excellence and to including environmental considerations from the very start into every new project or business.
- 5** We are working to build and maintain relationships founded on trust by keeping local stakeholder groups informed via dedicated channels of any risky situations or operational incidents that may occur that could have an environmental impact upon them. We conduct in-depth investigation of the causes and implement prevention measures.
- 6** We concern ourselves with spreading awareness and providing training so that environmental guidelines, standards and best practices are fully and responsibly taken on by each employee, contractor and service company at every operation site.

- 7** We measure the efficacy of committed resources and actions, having implemented a standard system for both internal and external environmental audits throughout the organization.
- 8** As part of this environmental policy, we are also committed to:

 - A. Developing solutions that will reduce waste that also encourage reusing and recycling products, materials and byproducts, looking for the best alternative uses and encouraging the circular economy.
 - B. Increasing the water use, energy, raw materials and natural resource efficiency of all our operations.
 - C. Using the precautionary principle whenever risk scenarios arise that affect people or the environment and making emergency plans available for any processes that have significant risks.
 - D. Helping create reasonable and necessary public policies whose aim is the long-term coexistence of needed productive activities and environmental protection.
 - E. Fomenting research and development of technologies that support environmental sustainability that are applicable to all Company business areas and subsidiaries.
