

# ENVIRONMENTAL POLICY EMPRESAS CMPC

We are CMPC, a multinational company with more than 100 years of history, and we seek to create the natural fiber for a better future, producing and marketing products from certified plantations under sustainable forest management, such as wood, pulp, packaging products, paper, tissue and personal care products.

We believe in the real application of the principle of sustainable development, which is why we have developed our business strategy in a way that takes care of the environment, seeks the best economic performance, and aims to be a change agent in the social development of the territories where we operate. Thus, we harmonize the development of current productive activities with the legitimate right of future generations to satisfy their own needs.

This Policy is applicable to the activities, products and/or services, both our own and those of third parties, carried out in all business units, subsidiaries, affiliates and countries where we operate. We also promote compliance among suppliers, business partners and customers.

To implement this, we have a **governance in place at the highest level of the Company with a comprehensive environmental strategy**, focused on achieving impeccable operations based on a solid long-term preventive culture, which seeks to minimize and control environmental impacts and the fulfillment of environmental sustainability goals that goes beyond mere legal and regulatory compliance.

**Given the above, at Empresas CMPC:**

- 1.** We believe in the ethical dimension of environmental protection. Strict compliance with the current environmental regulatory framework is our duty, as well as consistently monitoring regulatory trends and best practices based on the principle of continuous improvement to make progress on our environmental performance results.
- 2.** We promote the incorporation of environmental sustainability variables as an integral part of decision-making in our forestry and industrial operations, establishing goals and objectives to reduce environmental impacts. Through our management systems, we have the responsibility to identify and manage the positive and negative impacts that our activities, products and services may have on the surrounding communities and ecosystems, their functions and biodiversity.
- 3.** We are committed to developing activities with high levels of excellence, incorporating environmental considerations into every new project or new business from the very beginning.
- 4.** We work to develop and maintain relationships of trust, informing local stakeholders via specific channels of risk situations or the occurrence of operational incidents with environmental consequences that may affect them. We thoroughly investigate the causes and implement measures to prevent their future occurrence.
- 5.** We are concerned with raising awareness and providing the necessary training to ensure that the environmental guidelines, standards and best environmental practices are adhered to in a real and responsible way by each of our own workers, contractors and service companies in all our operations.

**6. We measure the effectiveness of the actions and resources committed, applying a regular system of internal and external environmental audits throughout the organization.**

**7. As part of this environmental policy, we are also committed to:**

- A. Developing solutions to reduce waste generation while encouraging the reuse and recycling of products, materials and by-products, seeking the best use alternatives and promoting the circular economy.
- B. Promoting the efficient use of water, energy, raw materials and natural resources in our operations.
- C. Applying the precautionary principle when risk situations facing the environment or people arise and having emergency plans in place for all processes where potentially significant risks may occur.
- D. Contributing to the development of reasonable and necessary public policies aimed at the long-term coexistence between the necessary productive activities and the protection of the environment.
- E. Promoting research and development of technologies that contribute to environmental sustainability, applicable to all the Company's businesses and subsidiaries.
- F. Promoting global environmental sustainability, working resolutely on lines of action related to **biodiversity protection, climate action and circularity**.
