2.PROFILE

In a world that is facing growing economic, environmental and social challenges, innovation is a critical tool for forging the way towards a sustainable future and serves as a key to unlock the door to what we are calling the "biofuture".

# **But what** do we mean by biofuture?

The production and marketing of certified, renewable products of natural our stakeholders. origin with significant potential for reuse, biodegradation and recycling, represents a sustainable response to societal needs and to the generation of a productive system that is more in line with these environmental challenges. For CMPC, the biofuture implies an in-

engagement, ensuring equitable develtegrated vision that links competitiveness, innovation, sustainability and reopment and the generation of shared value. Its consolidation requires solid sponsible resource management, in an effort to build resilient business models governance structures that are characthat are aligned with both present and terized by ethical practices, regulatory future needs. This goes hand in hand compliance and promote innovation. with our continued efforts to generate shared value with communities and engage in a trust-based relationship with

The biofuture is based on the efficient management of natural resources through responsible strategies that minimize environmental impact and promote ecosystem restoration, while strengthening company-stakeholder

Through 30 case studies, this Integrated Report presents the ways in which CMPC is taking an active role in building a new biofuture.

From emissions and waste management to the development of products to replace plastics and emission-intensive or non-renewable alternatives, **the** Company has charted a path toward the circular economy and carbon neutrality. This approach not only improves production efficiency, but also aims to generate shared value with the communities and the envi**ronment.** The biofuture is not a distant possibility, but a reality that is already under construction.

Cellulose, the backbone of the forestry industry, is positioning itself as a key material in the sustainable revolution. Its versatility means that it can be used in multiple industries, from the automotive industry to printed electronics and medicine. Cellulose composite materials are improving the efficiency of electric vehicles, while innovations such as flexible screens and biodegradable batteries are transforming modern technology. Even in processes. This evolution demonstrates health care, cellulose is used in biode-

gradable sutures and advanced medical dressings.

In addition, its application in the food industry is leading to the development of healthier products, such as natural cellulose-based gelling agents, which make it possible to create food products that are low in sugar and fat to increase the shelf life of food and decrease dependence on artificial additives. In the packaging sector, cellulose has enabled the creation of biodegradable bottles and packaging that represent a real alternative to plastic. The manufacture of specialized paper for a variety of uses—from biodegradable labels to maps and tickets for mass events-demonstrates the impact this resource has on everyday life.

The innovative products developed in recent years by CMPC reflect the longterm vision and integration of state-ofthe-art technology into the production that sustainability and innovation can

8.ESG INDICATORS

9.VALUE CREATION

10.APPENDICES

bring high-value opportunities, driving an industry that not only responds to the demands of our customers today, but also anticipates the needs of tomorrow.

This document is an invitation to learn how science, technology and nature can converge into sustainable solutions, generating a competitive business that guarantees a positive impact for future generations.

Today, more than ever, companies that integrate sustainability pillars-economic, environmental and social-into their core are the ones that will lead us into the future. We are already on the road to an increasingly responsible and competitive industry, and the decisions we make today will make a difference in the long term. The Biofuture is here.

history of CMPC.

have formed part of since 2018.

ed Reporting Council.

# ieopardize our principles and values.

Above all, we turned the crisis into an opportunity, building a stronger and more dynamic CMPC that preserves the best of its century-long history while adopting the world's most rigorous standards. A company with a vocation for growth, an international focus and a concern for sustainability, worker safety, operational excellence, product quality and innovation and the development of our neighboring communities.

With this spirit, we celebrated our centennial and then faced and overcame uncertain challenges like the pandemic, ensuring that none of our operations were interrupted and that essential products remained available to customers and consumers.

Today, we can confidently say that our dedication to excellence has not only restored public trust but has also reestablished CMPC as a global benchmark in the industry. This is reflected in the nearly 20 awards received in 2024 alone, covering areas as diverse as sustainability, inclusion, social responsibility, transparency, finance, innovation, and regional or state contributions.

Some of the most notable include the Impulsa award for gender diversity, the ESE Business School award for innovation, and the PMI Awards for the BioCMPC Project, which increased our Guaiba plant's production capacity by 20% while implementing major environmental improvements. The inauguration of this project included the participation of the Vice President of Brazil, Dr. Geraldo Alckmin, and the Governor of Rio Grande do Sul, Mr. Eduardo Leite.

We are global, and we are local. This can be seen in the recognition that awarded us as the best company in the region by the Cámara de la Producción y del

CMPC's reputation and public trust were suffering due to our own mistakes. In addition to confronting this complex situation and responding to public opinion openly and transparently, we set about creating entities and structures that would enable us to prevent and control situations that could

Comercio del Biobío (Biobío Chamber of Production and Commerce) in 2024, and the RS Export Award, which distinguished CMPC as the best export company in Rio Grande do Sul.

2024 INTEGRATED REPORT 13

But perhaps the best reflection of our work over the years is our Dow Jones Sustainability Index ranking-for the second year in a row-as the world's most sustainable forestry and paper company.

This ranking is relevant because it compares us with global sustainability benchmarks, a fundamental pillar of our 2030 Strategy, where we continue to move forward with concrete goals, including the reduction of emissions and identification of baselines for the calculation of scope three, the reduction in water use in industrial processes and progress towards becoming a zero waste to landfill company.

The implementation of our Patagonia Project deserves special mention. This project includes a total of 26,000 hectares of conservation land in the Aysén Region, as well as a fourth park in our Bosque Vivo network as part of our Nature, Conservation and Biodiversity Strategy.

Evidently, third-party recognition is not an objective in and of itself, but it is an endorsement of our work and shows Chile and the world that as a company, we are capable of overcoming difficulties related to transparency, excellence and sustainability, while maintaining a vision and vocation for the future that we look to promote and share.

This encourages us to participate in the public debate in terms of exposing situations that we become aware of and that affect both the Company and the environment in which we operate. This is why we have raised our voices about diverse complex aspects regarding the conflict in Araucanía. Although acts of violence have decreased as a result of legislative changes and a greater commitment by the authorities, the underlying problems remain, such as crime, poverty and limited possibilities for development under current regulations for the Mapuche communities.

1.PROLOGUE 2.PROFILE 3.GOVERNANCE 4.VISION 2030 5.PEOPLE 6.BUSINESS 7.SUPPLY CHAIN	14 CMPC							
		2.PROFILE	3. G 0 V E R N A N C E	4.VISION 2030	5. PEOPLE	6. B U S I N E S S	7.SUPPLY CHAIN	8.ES

We have also brought attention to the complex situation facing the forestry industry in Chile as a result of the drastic drop in the availability of timber. This crisis particularly affects hundreds of small and medium-sized owners of productive forests and sawmills, whose businesses have been suffocated by a lack of political decision and prejudices that have severely damaged the perception of our activity.

Although the authorities presented no concrete initiatives to promote the sector in 2024, we at least observed a change in tone, including announcements about legislative projects and a proposal for government action against climate change—involving the participation of our CEO—which includes increasing plantations as a measure to achieve Chile's carbon-neutrality goal.

As we have explained on several occasions, this warning call regarding the lack of foresight in terms of development opportunities for Chilean forestry, as well as international investment projects, in no way implies that we are implementing a retreat strategy from Chile.

Not just because of our Chilean roots and a history that dates back over a hundred years. Not just because we maintain relevant industrial and business facilities or because we have a highly trained and incredibly capable team. But also because Chile continues to offer undeniable comparative advantages that have enabled it to position itself as a global leader in the forestry and paper industry in just a few decades.

These advantages remain intact but require powerful actions to provide entrepreneurs and enterprises of all sizes with the impetus and security that will enable them to plant and invest again, mitigating the risks of fire, theft and attacks.

CMPC made a commitment to expand internationally over three decades ago in order to diversify, expand operations and leverage our capacity to respond to the growing demand for nature-based products.

We continued down this path in 2024 with concrete actions, such as the Softys agreement to add the Ontex operations in Brazil, which has positioned our subsidiary as the leading company in Latin America in the development of personal care products and solutions.

The development of Softys over these past nine years has been particularly remarkable, with a new and powerful organization with people from seventeen nationalities, its new image and positioning, brand consolidation, investments in growth, commitment to sustainability and generation of new products, to name a few initiatives. The above is the result of a forward-thinking project, implemented by an executive team that has successfully formed a highly committed and motivated group of people.

In the pulp business, in addition to the aforementioned capacity expansion at Guaiba, in 2024 we signed a protocol of intentions with the Government of Rio Grande do Sul and began environmental processing and engineering studies for what will become our second pulp mill in Brazil, with a capacity of up to 2.5 million metric tons of pulp per year. Not only is this the largest pulp production project developed by CMPC, but we have set ourselves the goal of making Natureza the best, most efficient and most comprehensive productive, environmental, social and economic project.

With the addition of BioCMPC and Natureza, we will have increased our pulp production capacity by over 40% by the end of the decade, consolidating CMPC as one of the world leaders in this industry.

All of these challenges have gone hand in hand with relevant back office improvements and efficiencies, as well as significant work in supporting and promoting local suppliers of products and services, as reflected by the overwhelming attendance at our third version of the Supplier Summit CMPC 2024.

I would also like to highlight the inauguration of the innovation hub in Brazil in conjunction with the Pontifícia Universidade Católica do Rio Grande do Sul, as well as new investments by CMPC Ventures, such as the Swedish company, Modvion, for the pioneering manufacture of wooden wind towers and the Finnish company, Boreal Bioproducts, to explore new products from forest waste.

Progress in the digitalization of our operations deserves special mention for its direct impact on productivity and efficiency. For example, one highlight is the Corporate Program for Advanced Control and Process Optimization for Company plants.

Our international and local presence is also reflected in our engagement with neighboring communities, as demonstrated by the contributions we made during the brutal storms that affected Rio Grande do Sul and southern Chile in 2024.

Within the framework of our 2030 Strategy, we also set ourselves the goal of being a catalyst for change in the development of the territories where we have a presence, and this requires accurate diagnoses, efficient management and measurement of results.

To this end, we have been developing a systematic set of tools that include a Territorial Human Wellbeing matrix for the diagnosis and modeling of community projects, as well as an integrated management system and a community project assessment area. This enables us to strengthen the community programs developed by CMPC and keep them aligned with the value creation areas of our community engagement framework.

Notable among these are the Desafío Agua program, with more than 4 thousand families who now have water supply in their homes for the first time; Bosque Vivo, with 60,000 visitors to our forest lands in 2024; Primeros Pueblos, with over 200 entrepreneurs who sell their products in stores in Santiago, Temuco and Concepción; the Construye Futuro Scholarships, which benefit 1,000 highly vulnerable students, mainly in the province of Arauco; the Softys Contigo program, which provides hygiene solutions to hundreds of families in Latin America; the Fibra do Bem Program in Brazil; and, of course, the CMPC DuocUC Campus in Nacimiento, which will change the future of thousands of young people in the Biobío region in the coming years.

These initiatives are joined by the work in early childhood education carried out for 24 years by our beloved Fundación CMPC, which expanded its presence in Brazil in 2024 through Instituto CMPC, with programs focused on the communities of Guaiba and Barra do Ribeiro.

These programs influence early childhood education and the developmental skills of parents. Their effectiveness is supported by high-level studies, with the results of the 2024 impact assessment of the Criando y Creciendo program further validating these outcomes.

A company of CMPC's scale, with our vision and values, cannot ignore the ecosystem around us. This concern is an integral part of our business and of what we consider to be a sustainable, long-term growth strategy.

Our commitment to inclusion, the environment, community engagement and innovation has never been a hindrance to growth. On the contrary, as I have described, there are several projects that we have developed over the years and are in the pipeline, as well as progress on digitalization, operational excellence, customer satisfaction and the opening of new products and markets.

In fact, the Company's EBITDA closed 2024 with a 15% increase over the previous year, largely due to the increase in pulp production as a result of the BioCMPC project, better sales prices and lower costs. Operating income grew 51%.

Consolidated revenue reached USD 7,743 million in 2024, down 4% from 2023 due to the impact of lower global revenue growth at Softys and Biopackaging, as well as the devaluation of some currencies in the region.

Profit was USD 491 million, an increase of 4%, despite a significant negative effect on deferred taxes due to the effect of the devaluation of the Brazilian real at the end of the year.

Beyond the variations and impacts of specific situations, these figures position CMPC as a solid company in financial and operational terms, with a sufficiently qualified, committed and professional team to develop the important projects we have in the pipeline.

For these reasons, I see these three periods at the helm of our beloved Company as a period full of both challenges and satisfactions, especially for the opportunity it has given me to be part of a team of excellence, both in CMPC and Softys, and for the in-depth knowledge it has given me of the productive, environmental and community contribution of this industry.

Today we can say, without a doubt, that we are looking at a new CMPC.

But this is not a new company that has forgotten its past. On the contrary, it is a renewed company built on the foundations of several generations of work, from a small paper enterprise in Puente Alto to the incorporation of new businesses, the expansion of borders beyond Chile and the consolidation as a player in the global pulp and tissue and personal care markets.

Our company carries a 105-year legacy, but it is also evolving into a modern enterprise, where productive and commercial development goals are intricately linked to the vision of innovation, growth and shared responsibility with the places where it operates, the communities and the environment.

Cellulose is used as an excipient in pharmaceutical and nutritional formulations due to its inherent properties of being a natural, safe and easy to incorporate material. It provides stability and improves absorption without affecting the effectiveness of the product. As a renewable resource, its use promotes sustainability and mitigates environmental implications.

CMPC is a global company with a 105-year history. It is dedicated to providing solutions based on natural fibers from certified forest plantations and recyclable materials. Its solutions and products are intended for uses as varied and fundamental to people's lives as packaging, construction, writing, printing, personal care and cleaning.

## April

# Aareement

# Signed for the Natureza Project

CMPC and the government of the Brazilian state of Rio Grande do Sul signed a memorandum of understanding to move forward on the Natureza Project. Through this agreement, CMPC can initiate the technical studies and environmental assessments needed for construction of a pulp mill near Barra do Ribeiro. The project also contemplates investments in road and port infrastructure, including the duplication of 376 kilometers of highway BR-290 and the creation of a new port terminal in Rio Grande.

### Softys Launched New Sustainability Strategy

The strategy's main commitments include reducing carbon emissions, improving water management and increasing the use of renewable energy. It also includes objectives for developing more sustainable products and promoting the wellbeing of the communities where it operates.

# Launch of the Venture Client Program

Focused on connecting CMPC operations with technological solutions emerging from the global start-up ecosystem. Ten challenges were announced that generated 15 pilots to generate solutions in the Forestry and Timber businesses.

### Confort is the most valued brand in Chile

This recognition, granted by 3D and Marca Ciudadana, is based on a public opinion study that evaluates the positive presence, relevance and social contribution of the brand.

### **Export Award in Brazil**

CMPC is recognized with the "Prêmio Exportação" in Porto Alegre, awarded by the Association of Marketing and Sales Directors of Brazil, highlighting its performance in foreign trade.

### **Innovation Campaigns Award**

First place in the "Campeãs de Inovação" award in the Innovation Culture category, standing out in its first participation in this recognition.

### New patent registered to improve forestry processes

Registration of the first loblolly pine clone in the National Register of Cultivars in Argentina, a milestone that strengthens forestry development at Bosques del Plata.

## May

### **Premios Viva Chile Packaging Recognizes CMPC for its Sustainable** Innovations

The company stood out in the sustainability, marketing and e-commerce categories for its innovations in Biopackaging. Award-winning products include Pulp-T, a biodegradable egg carton, and the Zero Waste Sack for cement.

### **Recognition and leadership in the Brazilian construction industry**

Sack Kraft Brazil consolidates its position as the main supplier of Votorantim Cimentos, a world leader in the construction sector. It also received the Gold Seal from the InterCement Partners Program and the Paraná Climate Seal for its ESG commitment.

# June

### Luis Felipe Gazitúa named Engineer of the Year in 2024

The Chilean Society of Engineers (Colegio de Ingenieros de Chile) highlighted his commitment to corporate sustainability and collaboration.

# Julv

### **CMPC Ventures Invests in Swedish Company Modvion**

The investment focuses on developing wind towers made from plywood. This partnership combines Modvion's expertise in the design of innovative wind turbine structures with CMPC's commitment to sustainability and the responsible use of forest resources.

### August

### Agreement Signed with Emerson and AspenTech to Implement Artificial Intelligence Solutions

This initiative improves the efficiency of production processes at its plants in Chile and Brazil, using advanced technology to increase productivity and reduce environmental impact. The collaboration will also include the development of tools to help anticipate and prevent operational failures.

# September

### CMPC Inaugurates Third Park in its Bosque Vivo Network in Loncoche

The Company inaugurated Parque CMPC Lastarria in Loncoche, the third park in its Bosque Vivo initiative. Located just two kilometers from the city center, this park covers 1,783 hectares and offers the community nine mountain bike trails and two trails for trekking and trail running.

# October

### **CMPC Patagonia Project Launch**

CMPC will develop this initiative in the Aysén Region, on its land, where it will

# **CMPC Ranked the World's Most** Sustainable Forestry and Paper **Company for the Second Year** This recognition is awarded for out-

standing performance in environmental, social and governance (ESG) criteria. CMPC was the only Latin American company to achieve this distinction, standing out for initiatives such as reduction of greenhouse gas emissions and implementation of conservation and biodiversity practices.

# December

**CMPC** Receives **Board of the Year Award** The Chilean Institute of Directors (Instituto de Directores de Chile) awarded

gion of Chile.

ing nature.

# Gold and Silver Effie for Softys'

advertising campaigns The business line was recognized with a Gold Effie for the campaign "Cotidian, never stop flowing" and a Silver Effie for "Nova Ultra", highlighting its impact and effectiveness in advertising communication.

Among the most innovative

companies in Chile

November

carry out several actions aimed at protecting the environment and conserv-

Some of the works that will be carried out on the more than 26,000 hectares are the reconversion of tree plantation lands to native forest, conservation of existing flora and fauna species, and maintenance of carbon sinks in the area. The project also includes the opening of a new park in the Bosque Vivo network, the first in the Aysén re-

Recognition by MIC Business Consulting as one of the most innovative companies in Chile.

CMPC for its Board of Directors' performance in terms of sustainability and corporate transparency.

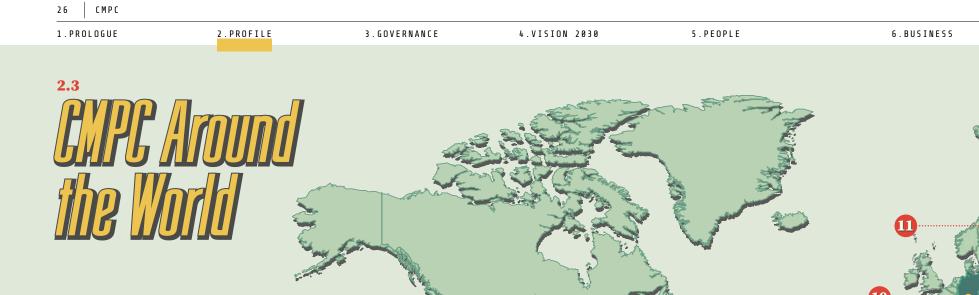

### Official Inauguration of the BioCMPC Project

On December 2, in the presence of the Vice President of Brazil, CMPC inaugurated the BioCMPC Project, an important investment in the Guaíba Plant, for plant modernization and compliance with high environmental standards.

### ZeroWaste Sack consolidates its presence in new Latin American markets

1.3 million bags were sold in Colombia and 150 thousand in Mexico in its first sale. These were recognized at EXPO-CAMACOL with first and third place in the Innovation category.

# Dividend **Policy**

NGC 461 (2.3.4.ii)

The Dividend Policy is defined annually and is reported by the Board of Directors at the Annual General Meeting. The Board of Directors agreed to distribute 30% of the distributable net profit for the year ended December 31, 2024, through the distribution of two interim dividends to be determined by the Board of Directors, payable approximately in September and December 2024 or January 2025, and a final dividend to be determined at the Annual General Meeting that will review the financial statements for 2024, payable on the date agreed at that meeting.

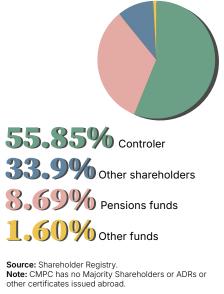

Finally, it was agreed that dividends were payable in Chilean pesos (CLP) or US dollars (USD) as required by shareholders.

# **Payment Method**

shareholders that in 2024 there would be no in-person dividend payments at the offices of Em-presas CMPC.

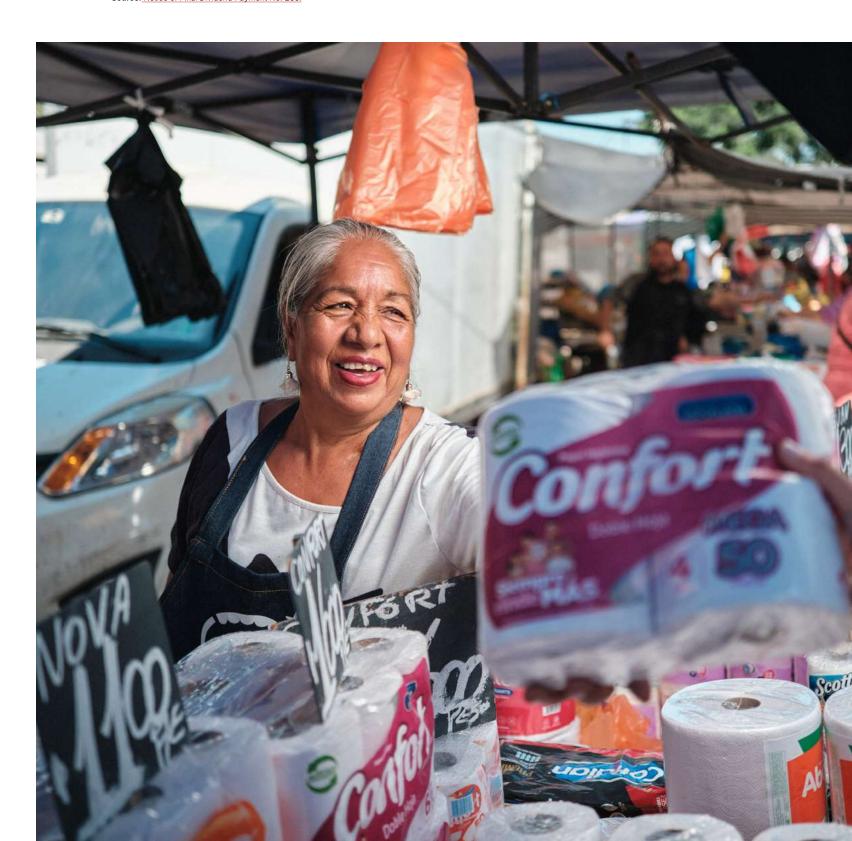

Consequently, the dividend was paid in Chilean pesos (CLP) or US dollars (USD) as required by shareholders.

5.PEOPLE

CMPC's corporate governance is structured around a regulatory framework established in the Corporate Governance Handbook and the Policies and Procedures for Corporate Governance document. These documents establish the Company's management protocol, as well as the guiding principles for the actions of its members. These principles promote a culture of integrity and accountability.

# Corporate Governance **Policy**

NCG 461 (3.6.vii)

The Company also has policies and standards that establish guidelines and ensure proper corporate governance in all areas and in its engagement with different stakeholders.

These policies and standards are mandatory for all CMPC directors, executives and employees.

# **Governance and Sustainability**

NCG 461 (3.1.ii) GRI (2-23; 2-24)

One of the pillars of the 2030 Strategy is Sustainability, which is applied to all its operations. This strategy incorporates a long-term environmental, social and governance vision, with

commitments that can be measured over time.

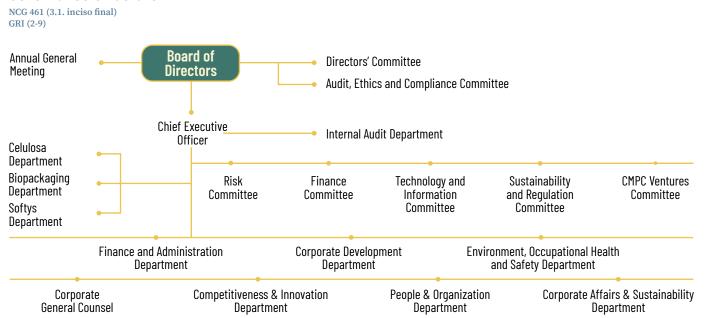

The goals and commitments of this pillar are aligned with corporate policies and manuals that incorporate due diligence through the Human Rights Policy and the principles of the Environmental Policy and Climate Change Policy. Each commitment is governed by the Sustainability, Environment and Occupational Health and Safety Departments.

To learn more about how CMPC incorporates environmental, social and human rights issues into the different assessment processes and strategic definitions, see **Chapter 8**.

<sup>1</sup> For more information about the pillars of CMPC's 2030 Strategy, please refer to Chapter 4 of this Integrated Report.

# Changes to the Crime Prevention Model at CMPC

In 2024, CMPC updated its Crime Prevention Model, in keeping with the provisions of the Law on Economic Crimes and Environmental Violations. This model, which is part of the Company's Integrity Program, applies to CMPC subsidiaries established in Chile and Fundación CMPC. Its scope includes directors, executives, employees, customers, suppliers and related third parties.

Multidisciplinary teams carried out the update process, led by Corporate General Counsel, including leaders of the Company's business and operations. In addition to assessing risk processes and their respective controls, the Company held on-site and remote workshops for executives and employees in the areas of greatest exposure, providing tools to prevent, detect and respond to risks.

More than 600 employees participated in this first cycle, which will continue in 2025, including the updating and launching of the Crime Prevention Model e-learning course. This process also included the launching of a practical refresher capsule on competition and antitrust for risk areas and exposed positions.

"Participating in the update to the Crime Prevention Model was an enriching challenge and a great opportunity. It allowed me to experience firsthand the collaborative effort between different areas to **strengthen our compliance culture. We continue to make strides towards more transparent and sustainable management.**"

5. PEOPLE

# Role of the Board

GRI (2-12)

In accordance with Article 31 of Title IV of Law No. 18,046 on Corporations, the Board of Directors manages the company, approves its strategic objectives, defines management policies and evaluates its performance. It also leads and oversees strategic planning, including the annual business plan, budget and monitoring of the Company's strategic plan.

It also analyzes updates on organizational culture, including purpose, values, strategies and corporate policies. It oversees due diligence and management of economic, environmental and social impacts, encouraging the participation of stakeholders through dialogue, considering their expectations, when applicable.

# Additional Duties of the Board

- **Oversee** management and operation of the Crime Prevention Model.
- Authorize the initiation or termination
- of business activities.
- **Approve** the Company's risk model, its policies and stewardship.
- Make decisions on significant investments or divestments.
- Validate talent selection systems and ensure adequate and timely succession for executives.
- Conduct internal audits.
- **Propose** an external audit firm and risk classifiers to the Annual General Meeting.

# Nomination and Selection

### NCG 461 (3.7.iii; 3.7.iv) GRI (2-10; 2-14)

Shareholders are given prior information on the profile of candidates, including their skills, experiences, visions and trades. They are encouraged to prioritize candidates who represent corporate values and thereby elect those who are in the best interest of the Company.

The Company's <u>Policies and Procedu-</u> res for Corporate Governance establishes that the Board of Directors encourages shareholders to consider diversity among its members when electing candidates, both in terms of gender and in terms of training and experience, in order to optimize the role of the Board of Directors as a diverse and expert collegiate body. Although the policy does not establish specific minimums for gender diversity, CMPC has a Board of Directors that is currently composed of 37.5% women and 62.5% men.

# **1. Eligibility Criteria**

Individuals who meet the requirements established in the bylaws and legal standards, i.e.:

• They freely manage their assets and do not fall into any of the cases expressly indicated in Articles No. 35 and No. 36 of Law No. 18,046 on Chilean Corporations.

They own a minimum of 500 shares of CMPC.Independent directors must also

meet the conditions set forth in Article 50 bis of Law No. 18,046.

# 2. Independent Directors

Pursuant to Article 50 bis of Law No. 18,046, publicly listed corporations must appoint at least one independent director when they have:

• Market capitalization equal to or greater than the equivalent of 1,500,000 Unidades de Fomento (UF).

• At least 12.5% of its issued voting shares held by shareholders who indi-

vidually control or own less than 10% of such shares.

An **independent director** is a director who has no ties or relationships with the controlling shareholder described in Article 50 bis.

# 3. Provision of Information to Shareholders

At least 2 days prior to the Meeting, the Chief Executive Officer will make the following available to the shareholders and the general public:

• Information on the candidates for the position of director, including information on their experience, profession, occupation and whether they have maintained contractual, commercial or other relationships with the Company's controller, main competitors or suppliers in the last 18 months.

• The list of candidates for director who have accepted their nomination and have declared that they are not disqualified from holding office.

• Candidates for independent director must present the sworn statement required in accordance with the fifth paragraph of Article 50 bis of Law 18,046.

This information is posted on the Company website (www.cmpc.com). The Company will limit itself to the role of receiving this information and making it available to shareholders, and will not assume responsibility for verifying its veracity.

# 4. Election at the Annual General Meeting

The election of the Board of Directors takes place at the Annual General Meeting, where shareholders vote to elect their new members for the corresponding term.

The Company provides shareholders with the technological means to participate remotely in the meetings. These mechanisms are communicated through meeting summons and notices.

The Annual General Meeting is broadcast live to inform the public in real time about the resolutions adopted.

# Board **Compensation**

GRI (2-19; 2-20)

Each year, the Annual General Meeting reviews the Board of Directors' compensation policy. At the meeting held on April 25, 2024, shareholders agreed to maintain the compensation policy from the 2023 period. Under this policy, in 2024 directors received an allowance of whichever is the higher of the following amounts:

i. 1.5% of the interim and final dividends to be distributed out of 2024 earnings, based on the total percentage to be distributed, restated, divided equally for each Director.

**ii.** A fixed monthly remuneration in the amount of CLP 8,000,000, charged to the amount that each director is entitled to receive in accordance with paragraph (i) above.

The same Annual Meeting proposed to authorize directors to receive additional compensation for work other

# **Ownership Interest of the Board of Directors**

### NCG 461 (3.4.iv)

The bylaws state that directors must own at least 500 shares. As a result, the Board of Directors' shareholding is as follows:

• Luis Felipe Gazitúa, Ximena Corvo, María Cecilia Facetti, Jorge Matte Capdevila, Carmen Sfeir, Pablo Turner have 500 shares, with an ownership interest of less than 0.0% in the Company.

• The shareholdings of Bernardo Larraín and Bernardo Matte are included in the Controlling Interest section of this Integrated Report, since they form part of the Company's Controlling Group.

 Jorge Marín has a 2.9% direct and indirect ownership interest in the Company.

# **Board Assistance and** Access to Information Policy NCG 461 (3.2.x)

Ordinary meetings of the Board of Directors are held monthly, based on the schedule established in the annual calendar provided at the beginning of the year. Extraordinary sessions are held in accordance with the bylaws and the law. In 2024, 12 regular meetings were held.

Summons are issued 6 days in advance. The Policies and Procedures for Corporate Governance do not establish minimum requirements for attendance or dedication, either remotely or in person, at Board of Directors or the Directors' Committee meetings.

# **Board Attendance** at Meetings

### **Convene Platform**

NCG 461 (3.2.x; 3.2.xii; 3.2.xii.a; 3.2.xii.b; 3.2.xii.c; 3.2.xii.d) GRI (2-16)

Information for the Board of Directors is provided in a timely and continuous manner through the Convene platform, implemented in 2022. Directors receive the most relevant documents for each session, which include:

a. All of the minutes from the Board of Directors meetings from 2022 onwards. b. The minutes, table and documents summarizing the topics to be discussed at the meeting, as well as other background information needed for its development.

c. Periodic information on the Grievance Hotline, provided through the Audit, Ethics and Compliance Committee report. d. The final text of the minutes of the previous meeting is provided at least three days on average before the next meeting by the Chief Executive Officer, as well as the management report for the month to be discussed.

This system ensures transparency and effectiveness in the management of information for the Board of Directors.

# Board **Onboarding**

### NCG 461 (3.2.v) GRI (2-17)

CMPC has an onboarding procedure for new Board members, which aims to provide an overview of the Company, its lines of business, strategies, operations and risks.

As part of this onboarding, the new director is given a folder with the relevant and necessary documentation for the proper performance of their position, which includes, among others:

- Legal information for the Company
- Financial information
- Policies and procedures

In addition, as part of onboarding, meetings are held with the President, the Chief Executive Officer and senior executives, during which the new director can discuss business matters and other relevant issues in greater depth. This process is led by the Chairman of the Board, and its content is treated in the Policies and Procedures for Corporate Governance.

### **Board Assessment**

NCG 461 (3.2.ix, 3.2.ix.a, 3.2.ix.b, 3.2.ix.c) GRI (2-17, 2-18)

As part of the assessment of proper corporate governance, the Board of Directors has an annual self-assessment procedure, established in the chapter "Procedure for Ongoing Improvement in Operation" of the Policies and Procedures for Corporate Governance.

In this self-assessment, each director answers a questionnaire related to their role, including matters such as:

 Contribution to the definition of corporate goals and performance monitoring. • Detection of areas where members

could continue to grow and increase their knowledge, and oversight of regulatory compliance.

• Approval of budget and investments, among others.

The Chairman of the Board of Directors consolidates, reviews and presents the results of this assessment to the Board. The assessment aims to detect areas for improvement and to eventually implement them in those fields of action that can improve on social aspects.

Based on the detection of gaps, the Company updates its assessment procedure, proposing training and ongoing improvement to its directors, in order to detect and reduce the organizational, social or cultural barriers that could be

inhibiting the natural diversity of skills, visions, characteristics and conditions that would be present in the composition of the Board of Directors in the absence of these barriers.

Priority subjects for increasing knowledge include the following:

- Strategic management
- Management of risk
- Audit
- Strategic Company information
- Good corporate governance practices
- New technologies

Currently, there are no collective performance assessments of the Board of Directors or its committees, and the Company has not considered hiring external advisors to assess their performance. The results of the self-assessment are used to make adjustments to organizational practices, plan training, identify consulting needs in specific areas and schedule field visits.

# **Board Training**

NCG 461 (3.2 ix.a)

The Policies and Procedures for Corporate Governance document describes the ongoing Board training process, the purpose of which is to provide its members with updated tools for the efficient performance of their duties.

In addition, the VP Legal & Compliance, or a designee, reports to the Board of Directors on rulings, penalties and situations related to directors' legal duties, including possible conflicts of interest. These provide an opportunity to evaluate and analyze solutions to such cases, promoting a management that is aligned with ethics and regulatory compliance.

To strengthen the directors' knowledge of sustainability issues, the Sustainability and Regulatory Committee shares its minutes and monthly performance reports on corporate goals for emis-

# among other matters.

The Instituto de Directores de Chile (IdDC) awarded the "Dito CMPC, highlighting its comvernance sustainability and its work to strengthen transparency and corporate governance.

Commission.

# **On-Site Work** NCG 461 (3.2.viii)

In 2024, members of the Board of Directors visited the Company's facilities and operations to learn about their condition, operation and the main concerns of the employees at the plants. They also gathered recommendations from those in charge on improvements needed to optimize their performance. The Chief Executive Officer and some of CMPC's senior executives also participated in these visits.

# **Board Advisory** Services NCG 461 (3.2.iii)

At present, CMPC does not have a policy regarding the hiring of expert advisors. However, the Board of Directors has full autonomy to hire specialists when it deems necessary and is not subject to budgetary constraints. Advi-

sions, water, waste and conservation,

# **CMPC Receives "Directorio** del Año 2024" award

The Board of Directors also holds an annual meeting with the partners responsible for the financial statements audit firm to ensure an ongoing analysis of the audit plan and to address relevant issues. Additionally, through the Audit. Ethics and Compliance Committee, it oversees the Internal Audit Department, which is in charge of verifying effectiveness and compliance with the approved policies, procedures, controls and codes.

In 2024, the total expenditure on advisory services was USD 1,015,000, broken down as follows:

 MUSD 218 paid to permanent advisor Patricio De Solminihac Tampier.

 MUSD 749 paid to Luis Felipe Gazitúa Achondo for advisory services other than his duties as director of CMPC.

 MUSD 48 paid to consultant Ramiro Mendoza Zuñiga, for services rendered in the Audit. Ethics and Compliance Committee.

During this period, the Board of Directors did not contract other services with the audit firm responsible for the financial statements or with other external entities.

# **Contingency and Business** Continuity Plan

NCG 461 (3.2.xi)

CMPC has a business contingency plan aimed at adapting its organizational and operational structure to crisis situations, ensuring the continuity of its activities in the event of any incident that could interrupt or affect its processes.

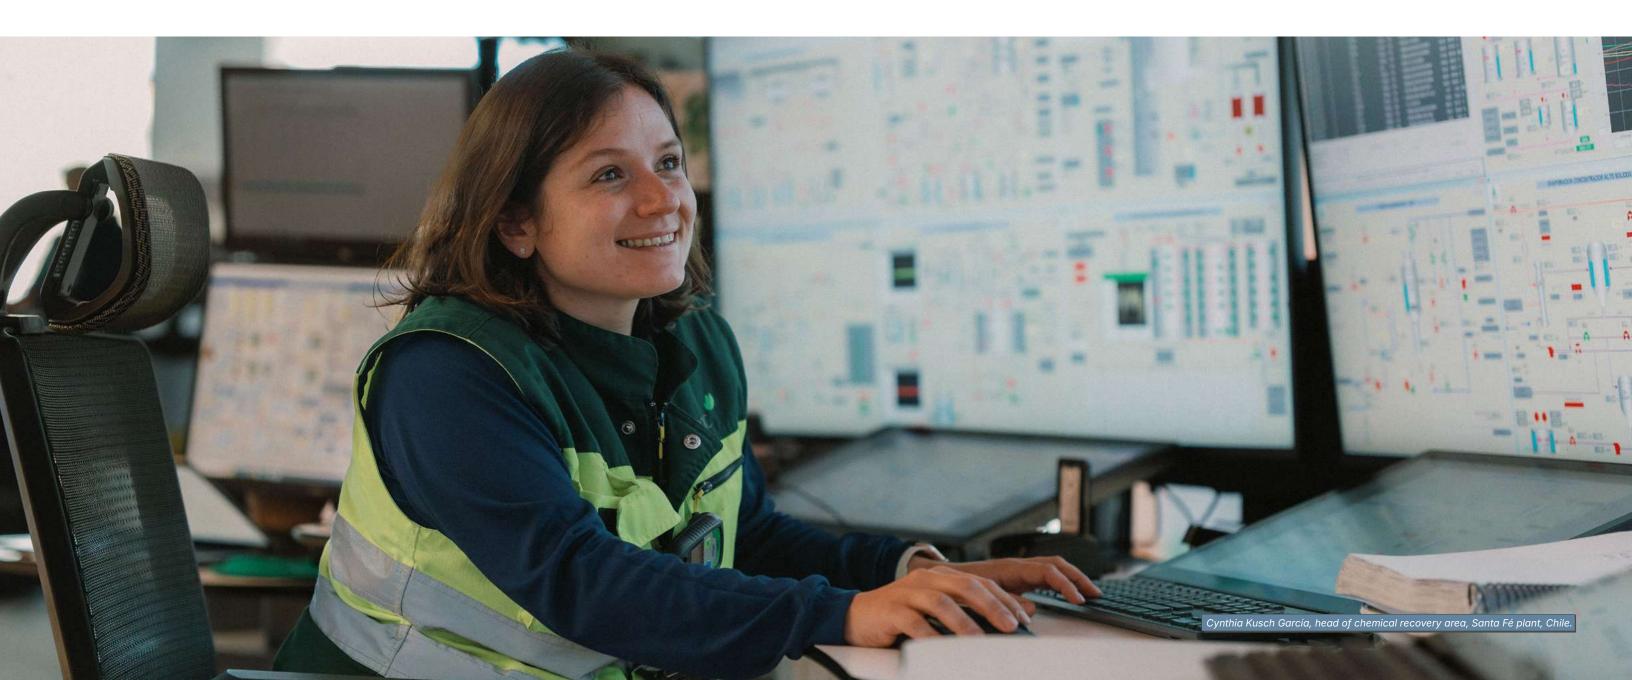

The Board of Directors is responsible for determining the materiality of a critical event, based on the risk matrix. Upon identification of a crisis, it may establish a Crisis Committee, composed of directors, senior executives and external advisors, depending on the characteristics of each case. This committee must appoint a chairman, define its mode of operation and take meeting minutes. In addition, with the support of the VP Legal & Compliance and legal advisors, the committee will

determine the need and appropriate moment to communicate the information to the market and the organization.

The Crisis Committee will propose specific actions to the Board of Directors, such as modifications to subsidiary management, measures in business areas, hiring of experts, establishment of work teams and internal communications to keep employees informed. It must also ensure confidentiality throughout the process. After each meeting, the Committee Chairman will report to the Chairman of the Board of Directors, who will determine whether it is neces-

sary to convene extraordinary meetings to make additional decisions. and follow-up:

# **Director's Committee**

NCG 461 (3.3.i; 3.3.ii; 3.3.iv; 3.3.v; 3.3.vi; 3.3.vii; 10) GRI (2-9)

The Directors' Committee performs the duties established in Article 50 bis of the Corporations Law, in the Company's bylaws and those entrusted to it by the Board of Directors. The committee meets monthly and reports to the Board of Directors at its regular meetings. Its main functions are listed in the aforementioned Law and include the following:

• Review information related to the transactions referred to in Title XVI and prepare a report on these transactions. • Propose external auditors and risk rating agencies to the Board.

 Analyze the reports prepared by external auditors, the balance sheet and other financial statements.

 Review employee compensation systems and plans in place.

This committee meets twice a year with the risk rating agencies, Fitch Ratings Chile and Humphreys Ratings, to analyze the Company's rating and its and plans.

payment capacity. It also meets at least three times a year with the external firm retained to audit the financial statements, to review progress in this area. The Chief Financial Officer and the VP Legal & Compliance also participate in both sets of meetings.

3.GOVERNANCE

In 2024, the committee carried out the activities within its area of competence, especially those indicated in Article 50 bis of Law 18,046 and the transactions cited in Title XVI of the same law, complying with the obligations set forth therein.

The committee carried out the following activities during the period:

- Review the interim and annual financial statements.
- Review the work of external auditors. their planning and evaluation, and propose external auditors to the Board of Directors for 2024.
- Propose external risk rating agencies for 2024 and review of their work.

 Review transactions with related parties, communicate to the Board of Directors regarding operations under Title XVI of Law 18,046 and approve annual customary transactions.

• Examine the compensation systems

• Present the work plan for 2024, inform the Board of Directors of its monthly activities and prepare the annual report for the Annual General Meeting and Annual Report.

In terms of the policy for hiring consultants, the committees turn to specialists when they deem it appropriate. In 2024, the Annual General Meeting approved a consultant budget of USD 100,000 for the current year. The Board of Directors annually reports on consultant expenses incurred.

At the end of 2024, the Company has not received comments or proposals regarding the progress of corporate business-other than those set forth in the Committee's annual management report attached to this report-from shareholders owning or representing more than 10% or more of the issued voting shares, in accordance with article 74 of the LSA and article 136 of Company Regulations.

10.APPENDICES

The Company has four committees to support management on matters that fall to the responsibility of management but due to their complexity, multidimensionality and possible impact, require the perspectives of senior executives and directors for their analysis. These committees are led by the Chief Executive Officer and are comprised of directors, senior executives and external advisors. The committees report their results and communications to the Board of Directors for its knowledge and analysis.

**Fixed Compensation** 

and stability over time.

6.BUSINESS

The Policies and Procedures for Corporate Governance document establishes the compensation, indemnification and incentives policy for both the Chief Executive Officer and senior executives.

The structure is based on market criteria, considering fixed and variable components aligned with sustainability principles.

This reflects a sustainable performance

that ensures the Company's profitability

Variable Compensation by the Board of Directors:

• 20% CMPC profits

- 15% sustainability goals
- 40% personal objectives

In 2024, the Board reviewed the variable compensation structure for senior executives, designing variable income to incentivize relevant achievements, in line with corporate governance expectations and the 2030 Strategy, incorporating sustainability performance as a key objective. Furthermore, fixed assets must reflect a sustainable performance, understood as the achievement of reasonably satisfactory results in terms of long-term sustainability and

profitability.

structure.

10.APPENDICES

NCG 461 (3.6.i) NIIF S1 (6 (a.i); 44(a); 44(a.v); 44(a.vi))

CMPC has a Risk Management Program, based on ISO 31000 and COSO ERM standards, which is applied in all business units and countries where it operates.

**Methodology:** this corresponds to a set of elements to implement risk management through a risk cycle.

ectors	The Board oversees the implementation of the Risk Man- agement Program, is cognizant of the most relevant risks, ensures their management and considers them for informed decision making.
tive Senior	These are the main parties responsible for risk management and sponsors of the 15 risk categories.
s ance	This committee reviews monthly progress on the implementation of the Audit Program.
lit	This department provides reasonable and independent assurance on the quality and degree of implementation of critical controls and risk treatment measures. This area reports directly to the Board of Directors' Audit Committee.
ty ion	It meets quarterly and supervises the risk strategy implementation in ESG areas and verifies compliance with annual objectives and goals. It mainly monitors risks related to environmental and social issues. These matters are included when discussing and adopting strategic decisions, business or budgetary plans, among others.
lisk ance	It contributes to improving the Company's risk-return profile and is responsible for designing and updating the Risk Management Program, based on best international practices and standards.
ttee	It meets quarterly and is responsible for reviewing the application of the risk management program structure, assessing its implementation, monitoring and compliance.

The different areas establish opportunities to supervise program implementation in conjunction with the management of the main risks identified, and report on their management plans to the respective Committees. Material risks are classified into categories, which correspond to the Company's risk sources. Each of these risk groups has an associated executive-level owner, which corresponds to one of the members of the Risk Committee.

# **Methodological Procedure for** Risk Management

NCG 461 (3.6.iii) NIIF (S1 – 30(c); 44(a.ii); 44 (a.iii); 44 (b)) NIIF S2 (10 (d))

The risk management process is necessarily part of the management and decision-making process and is therefore integrated into the organization's structure, operations and processes. These stages are as follows:

1. Communication and consultation	The risk management process is based on participatory consultations that integrate the perspectives of the experts involved, generating awareness and fostering a culture of shared responsibility.
2. Scope, context and criteria	The program covers all organizational levels, from strategic to operational, and considers all types of material risks, regardless of their origin (financial, operational, legal, environmental, etc.). The identification of the risk profile includes factors such as business context, nature of the business, location and environment. It also establishes criteria to determine whether the identified risks are acceptable or require further treatment.
3. Risk assessment	<ul> <li>This step includes the following:</li> <li>a. Identification: the Company implements workshops and specific activities to identify and prioritize material risks.</li> <li>b. Analysis: it studies the characteristics, causes, consequences and residual levels of risk, assessing their severity and probability.</li> <li>c. Assessment: it makes a determination as to whether the risk is acceptable based on the organization's risk appetite.</li> </ul>
4. Risk treatment	When material risks do not reach an acceptable residual level, the Company implements corrective measures to optimize the balance between risk and return.
5. Monitoring and review	The Risk and Compliance Department continuously monitors and evaluates the effectiveness of the program, promoting ongoing improvement and consolidating the risk culture.
6. Registration and reporting	All information is documented in the risk register. Risk reports include indicators that measure exposure and management evolution for each risk category, ensuring efficient monitoring aligned with organizational objectives.

# Risk Disclosure Program

NCG 461 (3.6.viii)

In 2024, the Risk and Compliance Department led a process to strengthen the risk management methodology. working specifically with risk owners, controls and those responsible for the associated action plans. These activities focused on identifying and analyzing new risks, as well as updating existing ones.

Likewise, it provided methodological training on risk assessment and controls to various areas of the operation and the business. The Internal Audit Department was also trained on the methodology applied for the identification, analysis and evaluation of risks associated with the new Economic Crimes Law. Nearly 200 people participated in these events.

In line with the above, the Company trained 160 people on the use of the digital risk management tool, "R360," also known as IBM OpenPages. The purpose of this tool is to streamline, digitalize and scale risk management in the organization, thereby contributing to strengthening the decision-making process. Participants covered the identification, assessment, monitoring and ongoing improvement processes in risk prevention and mitigation.

In relation to the new Law on Economic Crimes and Environmental Violations, CMPC organized an initial cycle of training workshops for executives and employees. A total of 696 people from Celulosa, Biopackaging and cross-functional areas of CMPC participated. The purpose of these in-person and remote workshops was to provide tools for the identification, assessment, prevention and mitigation of risks, strengthening their methodology and governance, in an effort to promote ethical and responsible decision making.

Finally, all employees, regardless of their country or position, receive and are asked to accept Company policies, including the Code of Ethics and the Crime Prevention Policy and Model, which are part of their employment contracts. For suppliers, customers and other strategic partners, these policies are incorporated into their contracts, agreements, administrative terms and conditions, general contracting terms and conditions and the code of conduct for suppliers.

**Risks CMPC** 

NCG 461 (3.6.ii) GRI (205-2) 44(a.iv): 44 (c)) TCFD (estrategia)

CMPC has detected 15 risk categories, with 62 macro risks and 503 material risks. The categories identified include sustainability aspects, and specifically are the following: 1. Ethics and compliance. 2. Environmental management and compliance. 3. Financial management. 4. Capital allocation, investment projects and M&A. 5. People development, diversity and inclusion. 6. Technology, systems and data security. 7. Geopolitical and sociopolitical changes. 8. Innovation, markets and competitive advantages. 9. Community engagement and company and industry positioning. 10. Fiber, forest assets and operations. 11. Management of industrial assets and logistics chains. 12. Procurement and service

companies.

13. Employee health and safety. 14. Protection of assets and people. 15. Consumer health and safety.

# **Risks and Opportunities Associated with Sustainability**

### NCG 461 (3.6.ii)

NIIF S1 (29 (d); 29 (e); 30; 32 (a); 32 (b); 33 (b); 33 (c); 44(a.i)) TCFD (estrategia)

The risks and opportunities associated with sustainability impact the financial situation. Risks can reduce assets, increase expenses and require significant investments, while opportunities can generate new revenues, encourage investments and improve access to financing. For their management, CMPC identifies and assesses these factors considering existing controls, determining the residual risk and implementing action plans or monitoring as appropriate.

To prioritize sustainability risks within the overall corporate risk framework, the

Company considers variables such as company strategy, incidents that have occurred, regulatory changes, audits, emerging risks and benchmarks. Based on this assessment, it establishes an order of priority and integrates this into CMPC's risk matrix, which is managed under the risk governance structure.

Given the nature of the Company, its main material issues are tied to forest and industrial assets, with environmental and social impacts that may affect operational continuity. As part of its preventive approach, every time it decides to invest in a factory or in any project, it analyzes the positive and negative effects on the environment and the community in order to establish mitigation measures. It presents the analysis of these risks to the heads of each area and to the Risk Committee.

CMPC has adopted mitigation and adaptation strategies that align with international standards such as TCFD, CDP and IFRS, which has implied higher operating costs to comply with environmental regulations, the growth of its reforestation and conservation strategy, the transformation of its product offering and the reinforcement of its monitoring and certification systems.

The main risks are concentrated in Argentina, Brazil and Chile, especially in forest assets, industrial plants and marine port terminals, due to the potential impact on the value chain. In contrast, opportunities arise in markets with high demand for recyclable and certified products, such as Europe and the United States.

The opportunities are associated with the fact that since the Company's products come from natural forest fiber, through innovation they have the potential to continue to replace more emissive and recyclable products in applications such as packaging, construction, energy, cleaning and care.

### List of Risks Associated with Sustainability NITE C1 (11)

TATTI.	91	(11)	

Main Risks Associated with Sustainability	Potential Time Horizon of Risk Impact	Potential Impacts on the Company	Risk Categories Associated with Climate Risks
Higher rates and regulation of emissions, products and services locally and internationally.	Short (2030) and medium (2050) term	<ul> <li>Increased operating and investment costs, affecting the competitiveness and profitability of operations.</li> <li>Increased disclosure requirements for financial information on climate change.</li> <li>Risk of limited progress on nature-related projects due to regulatory uncer- tainty about nature-based solutions and required investments.</li> <li>Potential reputational impact from land-use competition.</li> <li>Supply chain risk management, with emphasis on products exported to Europe.</li> </ul>	Environmental management and compliance.
Risk in the evolution of customer preferences and demand in the Celulosa and Biopackaging businesses.	Short (2030) and medium (2050) term	<ul> <li>Compliance with stricter international criteria, raising regulatory standards.</li> <li>More demanding standards on sustainability communication, with a more product-related approach.</li> <li>Increased demand for carbon and water footprint measurement, along with increased recyclability requirements.</li> <li>Restrictions on the use of chemical products, impacting processes and formulations.</li> </ul>	Innovation, markets and competitive advantages.
Increased costs of transition to low-emission technologies.	Short (2030) and medium (2050) term	High costs of technological adaptation, derived from upgrading plants in Chile to comply with the latest sustainability standards.	Technology, systems and data security.

2024 INTEGRATED REPORT 71

# List of Opportunities Associated with Sustainability

NIIF S1 (11)

TCFD (estrategia)

Main Opportunities Associated with Sustainability	Potential Time Horizon of Opportunity Impact	Opportunities for CMPC	Associated Risk Management Programs
Market opportunities			
Diversification of forms of financing through sustainable instruments (green bonds and loans, green credit lines and bonds, and sustainability-linked credits).	Short (2030) and medium (2050) term	Given the nature of its business, CMPC has the opportunity to access various forms of sustainable financing, such as green bonds and loans, green credit lines and sustainability-linked credits. These options offer favorable market conditions, such as more competitive rates, which can improve the Company's financial efficiency and support its long- term environmental and sustainability initiatives.	Financial management.
Development of innovation in new products or by-products that enable an increased presence in various sectors (construction, textiles, packaging, energy).	Short (2030) and medium (2050) term	Through current and future product innovation, CMPC has the oppor- tunity to expand its presence in emerging markets such as wood con- struction, biomaterials, biofuels, cellulose-based textile fibers and fiber recycling, cleaning and care, and packaging. It can also enter the energy market, generating renewable energy from by-products. This diversi- fied approach will enable CMPC to tap into new revenue streams and strengthen its positioning in key sectors in the future with less emitting and more recyclable solutions.	Innovation, market and competitive advantages.
Resource efficiency opportun	ities		
Technological developments that provide an efficient use of resources.	Short (2030) and medium (2050) term	The adoption of innovative technologies and processes will enable the Company to optimize the use of resources, such as energy, water and chemicals, which will lead to economic benefits. In addition, this will re- duce the loss of raw material and enable the recovery of by-products, contributing to improved operational efficiency and more sustainable operational performance.	Innovation, market and competitive advantages.

# Governance and **Identification** of Risks Associated with **Climate Change**

NCG 461 (3.6.ii.a) GRI (201-2)

NIIF S2 6 (a); 6 (a.iii); (6 (a.iv)); 6 (b.i); 6 (b.ii); 9(a); 10 (a); 10 (c); 11; 15; 16(a); 16(b); 22(f.i); 22 (f.ii); 25 (a.i); 25 (a.ii); 25 (a.iii); 25 (a.iv); 25 (a.v); 25 (a.vi); 25(b): 25(c)TCFD (Estrategia, Gestión de Riesgos)

Climate change represents a latent risk that leads to operational challeng-

es, such as water and fiber shortages, fires, pests and natural disasters. To address these risks, the Risk Committee oversees the management of material aspects in the operational, financial and environmental areas. In parallel, the Sustainability and Regulatory Committee evaluates the implementation of progress on ESG issues and verifies compliance with annual goals and objectives related to climate change. It carries out this analysis in collaboration with the Sustainability, Risk & Compliance, Environment, Occupational Health and Safety, and Forestry departments, and reports to the Board of Directors through committee reports.

For climate change management, it has implemented measures that include programming, investments and projections. It manages the risks associated with climate change under a resilience approach, which requires the integra-

tion of principles, a solid governance framework and methodologies applicable to the entire organization.

During 2024, a consulting firm specialized in ESG risks provided technical assistance in the implementation of the Task Force on Climate-Related Financial Disclosures (TCFD) standard. This process included the analysis of physical risk scenarios by using IPCC risk modeling, considering three scenarios: optimistic, medium and pessimistic, in the short- (2030), medium- (2040 and 2050) and long-term (2080) time horizons. This also included an assessment of transition risks and opportunities, considering climate scenarios in the short- (2030) and medium-term (2050) horizons.

It considered nine categories of weather events, including extreme weather and fires, as part of the analysis. The

selected scenarios correspond to those defined by the IPCC's Shared Socioeconomic Pathways (SSP) (AR6): SSP1-2.6, SSP3-7.0 and SSP8-5.

The Company also assessed transition risks and opportunities based on international scenarios, such as the Network for Greening the Financial System (NGFS) and the International Energy Agency (IEA), and short and medium-term time horizons, prioritizing opportunities of greater interest or impact for the Company. This analysis used historical weather event data, internal and external sources, and included interviews with executives and key employees.

The risk management procedure establishes time horizons associated with the probability of occurrence:

- Short-term: Risk with a probability of occurrence between 6 months and 2 years.
- Medium-term: Risk with a probability of occurrence between 2 and 5 years.
- Long-term: Risk with a probability of occurrence between 5 and 10 years.

The scope of this exercise considered selected operations and plants in Brazil and Chile, prioritizing the cellulose facilities in Guaíba, Brazil. This exercise strengthened the Company's quantitative analysis of climate impacts, the integration of governance, the establishment of cross-functional methodologies and risk management with a focus on resilience and sustainability.

Fiber, forest assets and operations Management of industrial assets and logistics chains **Environmental management and compliance** Innovation, markets and competitive advantages **Financial management** 

# The Company has identified five categories of climate change risks and opportunities:

In 2025, the Company will continue climate scenario analysis to assess the effects of risks and opportunities associated with climate change on its financial position, performance and cash flows. This process will make it possible to assess the resilience of the corporate strategy, the business model and the value chain, in addition to

supporting the analysis of the positive and negative impacts of its decisions on stakeholders. Along these lines, the Company will begin to incorporate the cost of emissions-through the internal carbon pricing tool-into investment processes, supplier assessment, mergers and acquisitions, and operations.

Marlin Pozo, machine assistant, Buin plant, Chile

# List of Climate-Related Risks

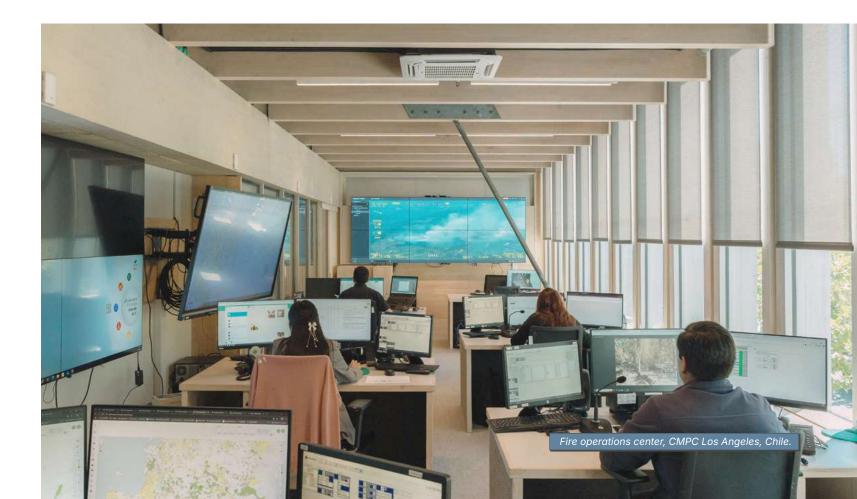

NIIF S2 (9 (a); 9 (b); 9 (c); 10 (a); 10 (b); 10 (c); 10 (d); 13 (a)) TCFD (Gestión de riesgos)

Main Climate- Time Horizon Related Risks		Potential Impacts on CMPC	Risk Categories Associated with Climate Risks
Acute risks associate	d with physical cha	anges	-
Increase in tempe- rature extremes or isolated extreme heat events (exceptionally hot days). Short (2030), medium (2050) and long (2080) terms		<ul> <li>Intensification of rural fires of greater magnitude, generating losses in forest plantations.</li> <li>Potential impact on the performance and operation of industrial equipment, reducing its production capacity.</li> </ul>	<ul> <li>Fiber, forest assets and forestry opera- tions.</li> <li>Management of industrial assets and logistics chains.</li> </ul>
Decrease in extreme temperatures or isolated events of extreme low tempe- ratures (extremely cold days).	Short (2030), medium (2050) and long (2080) terms	<ul> <li>Negative effects on the growth of forest plantations, reducing the availability of fiber and consequently impacting operational continuity and efficiency.</li> </ul>	• Fiber, forest assets and forestry operations.
Increased incidence of natural disasters, heavy rains, floods, deluges, landslides, mudslides, cyclones and hurricanes.	atural disasters, vy rains, floods, lges, landslides, dslides, cyclonesmedium (2050) and long (2080) termsto costs associated with the repair or restitution of equipment and infrastructure. • Potential failure to meet delivery times, impacting the supply chain and customer relationships.		<ul> <li>Management of industrial assets and logistics chains.</li> <li>Environmental management and compliance.</li> </ul>
Forest fires. Short (2030), medium (2050) and long (2080) terms		<ul> <li>Destruction of large areas of forest due to heat and flames.</li> <li>Loss of biodiversity and reduction of revenue.</li> <li>Damage or destruction to equipment, vehicles, buildings and storage facilities.</li> <li>Blocking of key areas and employee access routes from fire or debris.</li> <li>Exposure to heat, flames, smoke particles and dust.</li> <li>Possible need to evacuate employees.</li> <li>Port access blockage and disruptions in key transport networks.</li> <li>Delays at the terminal if the cargo does not arrive on schedule.</li> <li>Smoke from nearby fires can affect the visibility of ships and employees operating vehicles or cranes.</li> <li>Risk to employee health and safety, which may result in operational delays or downtime.</li> </ul>	<ul> <li>Fiber, forest assets and forestry opera- tions.</li> <li>Management of industrial assets and logistics chains.</li> </ul>
Chronic risks associa	ted with physical c	hanges.	
Permanent decrease in rainfall or drought.	Short (2030), medium (2050) and long (2080) terms	• Production and competitive advantage depend significantly on the yield and low cost of forest plantations, which are grown exclusively with rainwater. Changes in rainfall patterns could affect this model, reducing productivity and increasing operating costs.	• Management of industrial assets and logistics chains.
Reduced water availability for production processes.	Short (2030), medium (2050) and long (2080) terms	<ul> <li>Water shortages could lead to interruptions in productive operations, affecting efficiency and production times.</li> <li>Additional expenses derived from the purchase of water from external sources or the implementation of technologies to reduce water consumption in processes, which would have a negative impact on operating costs.</li> </ul>	• Management of industrial assets and logistics chains.

# Other Risks and Emerging Risks

# CMPC has identified emerging risks associated with:

Cyberattacks against industrial plants	These could seriou production targets information techno These can also r negatively affecting
Restrictions in water use	To prevent environ environmental goa goal of reducing wa protocols that guar water under legally
External climate events	Despite these being to business contini- cause shutdowns, demands. In additionand recovery of as in 2024 the Compa- Related Financial D

busly affect the continuity of operations, generating stoppages, impacts on s and difficulties in meeting customer needs by compromising the security of ology systems, including those of production plants and service providers. result in unscheduled maintenance and asset recovery expenditures, ng financial results.

nmental impacts derived from its operations, CMPC has established specific als aimed at the responsible and sustainable use of water. In addition to its water consumption in industrial processes, the company has processes and arantee compliance with legal provisions, which require the extraction of ly constituted rights.

ng beyond the company's control, climate events represent a significant risk nuity. Global warming increases the frequency of acute events, which can s, affect production targets and compromise the ability to meet customer tion, these events may require unforeseen expenditures for the maintenance assets, negatively impacting CMPC's financial results. As mentioned above, pany made progress on the implementation of the Task Force on Climate-Disclosures (TCFD) standard.

# subsidiaries, which defines fundamental principles, areas of application, and specific mechanisms to identify, manage, and remedy potential human rights violations, with a preventive approach. This policy covers employees, business partners, and all links in its value chain, considering actual and potential impacts. Responsibility for human rights management falls to several areas, as it is integrated into the Company's ongoing management.

repair actions in the event of possible

The Company adheres to internationally recognized principles of responsible business conduct, including, among others, the United Nations Guiding Principles on Business and Human Rights and the Global Compact principles. CMPC is also committed to and promotes respect for the rights enshrined in the Fundamental Conventions of the International Labor Or-

ganization. Under these frameworks, CMPC is part of the efforts to promote the eradication of child labor and forced labor, non-discrimination, freedom of association and the prevention of environmental and social impacts, with special attention to vulnerable groups such as women, children, indigenous peoples and local communities in its areas of operation.

This system ensures transparency and the effective allocation of human and financial resources for the daily management of human rights, which is determined by each area related to this matter. The Company is making progress in strengthening and integrating this approach into its operations as a result of the ongoing due diligence process.

BIO-FUTURE

FOR THE

**30 INNOVATIONS** 

2.PROFILE

# **Human Rights** in the Supply Chain

Various aspects of human rights, especially labor rights, are part of the assessment and admission system for suppliers and contractors and the accreditation process for service companies. These entities are subject to periodic assessments and reviews to verify compliance. CMPC uses supply chain monitoring systems for international suppliers, which include exclusion lists with warning factors for possible history or suspicion of non-compliance with the Human Rights Policy.

Several areas of the Company are responsible for carrying out an assessment and management of supplier risks, with special participation of the Procurement, Third-Party Services Management and Risk & Compliance Departments.

2024 INTEGRATED REPORT 79

# Due Diligence

The development of the plan for integrating human rights involves the areas of General Counsel, Sustainability, Environment, Occupational Health and

Safety, People and Organization, and the Celulosa Department. This plan consists of the following eight key steps:

3.GOVERNANCE

Between 2023 and 2024, the Company conducted a diagnosis of the implications of a due diligence process, analyzing the industrial sectors and the local and international regulatory framework. Based on this analysis, it **3.** Monitoring the implementation and established human rights governance results. with the participation of the Sustainability and Risk departments, the Sustainability and Regulatory Committee, and the Board of Directors as the final responsible party.

In the last guarter of 2024, the Company began a human rights due diligence process, under advisement from the Corporate Sustainability Program of the Pontificia Universidad Católica de Chile. This process is led by a working group composed of the Sustainability, Risk and Compliance, Public Affairs, Procurement, and Environmental, Occupational Health and Safety departments. This working group is tasked with accompanying and supporting the completion of the due diligence process and taking recommendations and results and integrating them jointly into Company operations, especially in the areas involved. It reports on progress to the Board of Directors.

The due diligence process is based on five stages, in line with the United Nations Guiding Principles and following the OECD due diligence guidelines:

**1.** Identifying and assessing negative impacts on operations, supply chains and business relations.

- 2. Stopping, preventing or mitigating negative impacts.
- 4. Reporting on how impacts are addressed.
- 5. Remediating or collaborating on remediation of impact when necessary.

The objective of the ongoing due dilidence exercise is to cover a representative percentage of the operations and the production cycle in the coming years. In 2024, CMPC began with the forestry operations in the Biobío Region, establishing permanent governance to strengthen the capacity of the areas linked to internal and external groups to identify and manage any identified current and potential risks and impacts on human rights.

The due diligence currently underway contemplates the participation of potentially affected stakeholders through talks, semi-structured interviews, surveys and visits to operations. An external team from the Pontificia Universidad Católica de Chile carried out all stakeholder survey and engagement activities.

To ensure representativeness in the survey of risks and impacts from the stakeholders involved in the process, and to obtain information on the most relevant issues, this involved an intentional sampling based on a previous investigation of the traditional and most likely risks and issues for a forestry industry, with an aim to prioritize the impacts on people or human groups that could be most exposed to the Company's activities. Academics and researchers from the Universidad Católica de Chile with expertise in human rights and responsible business conduct were responsible for this preliminary research and survey.

The process considered the participation of Company workers, workers from contractor companies, and neighbors of the operations, and it used various instruments such as surveys and an open call for independent and confidential semi-structured interviews. In relation to Company engagement with indigenous peoples, the documentary research exercise covered matters that could affect them, but these were not included in the field survey activities carried out in 2024, given the territorial scope defined for the progressive and tiered implementation and representativeness of the standard.

During this process, the external team conducted 47 interviews with Company workers and 27 interviews with workers from contractor companies working in the municipalities of Mulchén. Nacimiento and Santa Bárbara. It also administered a survey to 165 male and 89 female workers, both Company workers and workers from contractor companies.

CMPC will use the results of the due diligence process to strengthen management in various areas, further to

what it is already doing, which covers various human rights areas that correspond to a significant percentage of the most relevant risks for the Company, as concluded by the external expert team. When the analysis identifies opportunities for improvement during the analysis, the Company establishes mitigation measures in conjunction with operations and monitor their implementation. Below are some of the risks identified and analyzed in this due diligence exercise:

- Physical and mental health and safety at work
- Environmental impacts
- Quality of life of nearby communities
- Fire risk and its effect on life

The grievance hotline is available to report non-compliance with the Human Rights Policy, as well as with the various regulatory bodies that define behavioral expectations in this area.

# **Commitments** Associated with the 2030 Strategy

Pillar	Commitments
Growth and innovation	<ul> <li>Grow profitably in Biopackaging, Maderas and Pulp.</li> <li>Create new business and products through innovation.</li> </ul>
Customer	• Increase close collaboration with the customer, strengthening direct sales and improving the level of service.
Talent	<ul> <li>Work towards an evolution of culture and leadership in compliance with the strategy, aiming for an Operational Excellence.</li> <li>Ensure the organizational capacities and talent necessary to grow.</li> </ul>
Sustainability	<ul> <li>Be a global industry standard in sustainability, leading the main ESG indicators.</li> <li>Be a factor of change in social development and build social capital.</li> <li>Contribute to the Company's sustainability through challenging science-based environmental goals.</li> </ul>
Competitiveness	<ul> <li>Be in the 10th percentile in production, costs and expenses in Celulosa and Biopackaging, with impeccable operations.</li> <li>Achieve a world-class OEI.</li> </ul>

# Growth

CMPC's strategy is focused on the growth of its main business areas in the coming years. To this end, it has developed a portfolio of projects that strengthens its presence in various markets and optimizes profitability.

# Projects that Contribute to Company Goals

NCG 461(4.1, 4.3)

The Company plans its investments to address the challenges of the 2030 Strategy, prioritizing investments that generate the greatest impact on its strategic initiatives.

Through this prioritization process, the Company is able to identify the best alternatives to meet its goals. The methodology used integrates economic and socioenvironmental variables, classifying projects into three categories based on their priority:

# **Critical Projects**

These are essential to ensuring operational continuity, regulatory compliance and the prevention of occupational hazards and accidents. These projects are a priority because they ensure the optimal operation of industrial facilities.

# **Normal Projects**

These are smaller projects, aimed at operational continuity and environmental improvements.

# **Profitability Projects**

These are designed to meet growth objectives, increase operating profitability and strengthen the Company's financial results. These are prioritized through a scoring system that assesses financial, social and environmental variables, ensuring alignment with corporate sustainability and profitability goals. All projects must comply with a process that includes identification, assessment and implementation stages.

Depending on the time horizons associated with the implementation periods and the assets or useful life of assets or infrastructure involved, CMPC classifies projects as follows:

- Short term: projects with a duration
- of less than two years.

• **Medium term:** initiatives that take between two and four years.

8.ESG INDICATORS

9.VALUE CREATION

10.APPENDICES

• Long term: projects whose duration is five years or more.

CMPC has a committee on a corporate level that is responsible for analyzing and defining the main investments. Its members include the following:

- Chief Executive Officer
- Senior VP Celulosa and Biopackaging Business Area
- Chief Development and Projects OfficerChief Financial Officer
- VP Corporate Affairs & Sustainability

- VP Environment and Safety
- VP Research

This process has resulted in the efficient implementation of CMPC's projects, with a portfolio of 1,127 initiatives and an average variance of 2% with respect to the resources approved by the Board of Directors.

# Main Investment

Projects in 2024

6.BUSINESS

The following are the main investment projects with equity capital sources:

Project	Location	Goals	Time Horizon	Status	Estimated Amount to be Invested (MUSD)
Celulosa					
Capacity increase	Los Angeles remanufacturing Plant, Chile	Increased production and modernization.	Short term	Under implementation	72.0
Revamp Laja Plant	Laja Plant, Chile	Operating continuity.	Short term	Under implementation	44.7
Evaporator capacity increase	Santa Fé Plant, Chile	Increased evaporator capacity and improved condensate handling.	Short term	Final implementation stage	40.3
Modernization Mulchén	Mulchén Plant, Chile	Modernization, operational efficiency, increased capacity.	Short term	Under implementation	20.6
Revamp Guaíba Line 1	Guaíba Plant, Brazil	Modernization and operational continuity.	Short-term	In commissioning	129.5
Reduce water use in Pacífico Plant.	Pacífico Plant, Chile	Reduce water use.	Short-term	Under implementation	29.8
Plywood value-added line	Plywood Plant, Chile	Modernization and increase of value-added capacity.	Short term	Under implementation	9.7
Biopackaging					
Edipac handle bags	Quilicura, Chile	Implementation of machines to manufacture bags with handles.	Short term	Under implementation	6.8
Reduction of specific water consumption	Puente Alto, Chile	Implementation of super clarified water system, closed circuit with cooling tower and line measurement.	Short term	Under implementation	3.8
Maule wood yard improvements	Yerbas Buenas, Chile	Replacement of drum debarker in the plant yard.	Short term	Under implementation	3.5
Softys					
New 290 Line	Megacenter, Peru	Installation of conversion line with wet embossing technology.	Short term	Under implementation	12.2
Transfer of lines to Argentina	Zárate Plant, Argentina	Transfer of conversion lines from Brazil and Chile to strengthen leadership in the Consumer Tissue business line.	Short term	Under implementation	12.0
New 280 Line	Megacenter, Peru	Installation of conversion line with wet embossing technology.	Short term	Under implementation	11.0
Paper machine project No. 5	Altamira, Mexico	Increased capacity in Mexico to meet Tissue demand.	Medium term	Under implementation	72.0

# **Natureza Project** in Brazil

CMPC began the assessment of the Natureza Project, which contemplates the construction of a new cellulose plant and the development of ancillary infrastructure in the state of Rio Grande do Sul. For its implementation, the company drew up a protocol of intentions with the local government as part of its effort to make progress on the necessary studies.

The initiative integrates industrialization, road and port infrastructure, sustainable associative forestry, conservation and cultural promotion. It plans to build a cellulose plant 15 kilometers from Barra do Ribeiro, with a production capacity of up to 2.5 million metric tons of short-fiber bleached kraft pulp per year. The factory will be located 34 kilometers from CMPC's current plant in Guaíba.

The project, which has been under analysis for almost a decade, considers an investment of USD 4 billion in plant construction, in addition to USD 420 million in road infrastructure works and USD 150 million for the development and expansion of the port terminal in Rio Grande.

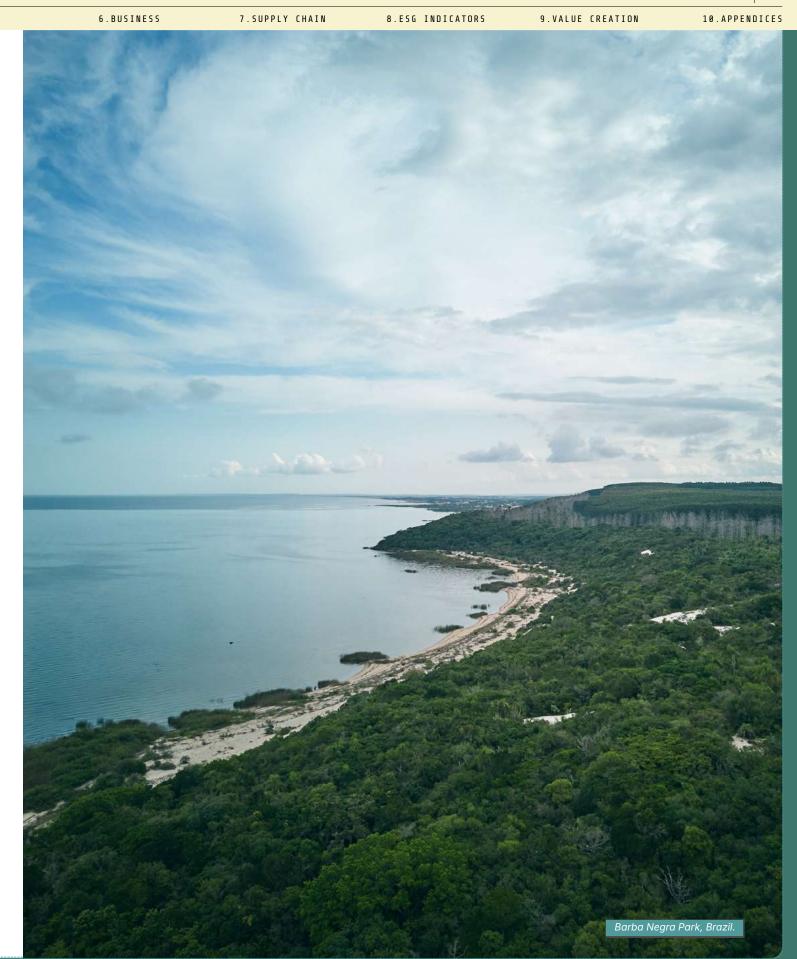

In the conservation area, Natureza aims to protect and enhance the Barba Negra Private Natural Heritage Reserve (RPPN) through the creation of the Barba Negra Ecological Park.

The project is part of CMPC's international expansion strategy, and in its construction phase, it anticipates the creation of more than 12,000 jobs, prioritizing local labor.

Natureza is currently developing environmental studies and authorizations and is working with the best global specialists on this type of project.

"For me personally, participating in this great project is a source of pride and enormous responsibility with a company that has consistently shown its commitment to doing things responsibly and with rigor and research throughout its history; it is my fourth megaproject with CMPC but it is this one that has generated the highest level of enthusiasm on our team as we observe its gradual materialization from concept to concrete project. It will undoubtedly be a benchmark in our industry for many years after its launch."

> Marcelo Garrido F. Natureza Project Director, CMPC.

7.SUPPLY CHAIN

CMPC faces strategic challenges that require innovative approaches to develop effective and differentiating solutions. Innovation not only responds to these needs, but also strengthens its competitiveness. To manage it, there are specialized teams that promote projects in collaboration with different areas.

The Company established a corporate-led monitoring entity as part of this strategy. In addition, each business area has an Innovation Committee, made up of its senior executives. It holds monthly meetings to monitor progress, adjust actions and guarantee alignment with transformation processes, ensuring compliance with strategic objectives.

The members of each committee include: Chief Competitiveness & Innovation

Officer • Senior VP of Business Area (Biopackaging or Celulosa)

- CEO of Subsidiary
- Innovation Leader
- VP of Research and Deputy Manager per Business Area

• Chief Operating Officer (of each business area)

- Chief Commercial Officer
- Other relevant leaders as needed

# Technology Roadmap

In 2023, CMPC created a technology roadmap that it uses to address its strategic challenges. This tool guides

technological innovation towards process improvement, operational optimization and adaptation to the needs of each business area. Its purpose is to align initiatives under a common strategic direction, avoiding fragmentation in project management and ensuring an effective implementation of technology to generate value.

The roadmap helps to determine how to prioritize investments in technology, considering risk assessment, expected benefits and their alignment with Company goals. This roadmap defines three innovation territories, which steer the identification of opportunities and the development of new initiatives and projects: 1) implement (tree design and product portfolio), 2) experiment (efficiency and circularity, water for future sustainability, biorefinery, among others) and 3) monitor (forest architecture and ecosystem value).

This methodology helps CMPC to balance the optimization of its current operations with the exploration of new opportunities, ensuring its future competitiveness.

# **Line 2 Modernization** at the Guaíba Plant: **BioCMPC Project**

The BioCMPC Project involved modernizing Line 2 of the Guaíba Plant to meet high environmental and operational standards and increase production by 350,000 metric tons of BHKP per year. To achieve this, the Company implemented improvements in all process areas of the factory, installing new equipment.

During implementation, there were challenges such as installing major equipment in operational areas, adapting the construction strategy due to the pandemic, and managing logistical impacts from the war in Ukraine on the availability of materials and transportation.

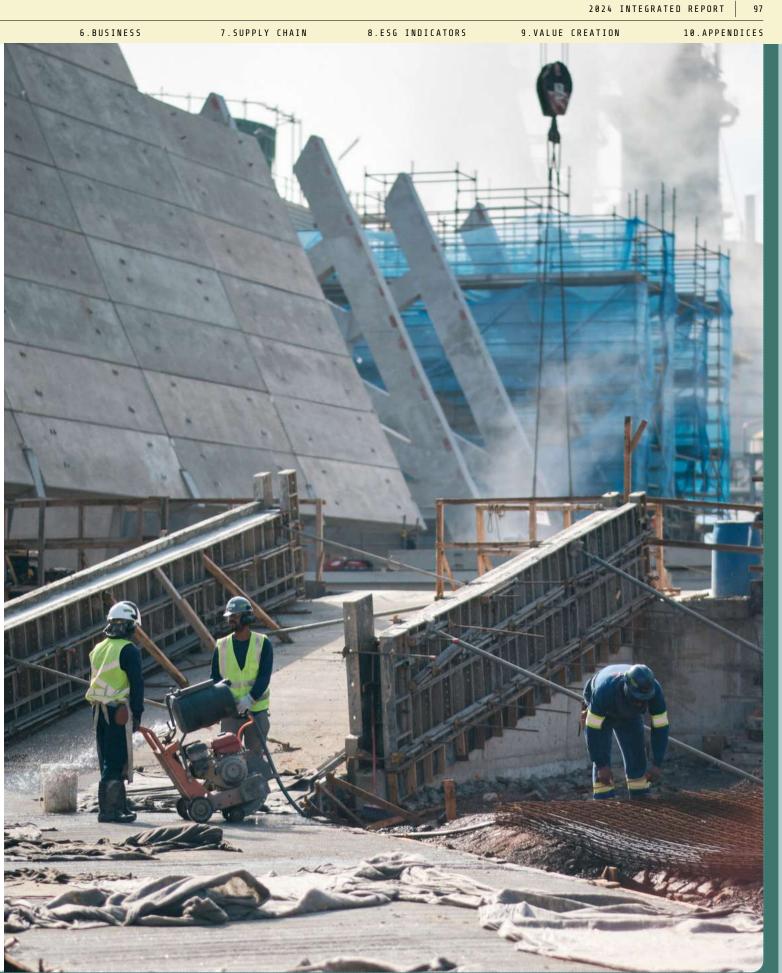

The project included measures to reduce environmental impact, achieving a reduction of 325,000 metric tons of CO<sub>2</sub>e per year and a reduction of 2 m<sup>3</sup>/ADT in water consumption, positioning Guaíba as the plant with the lowest water consumption in Latin America and one of the most efficient worldwide. The project also reduced the noise level by 2 to 5 dB.

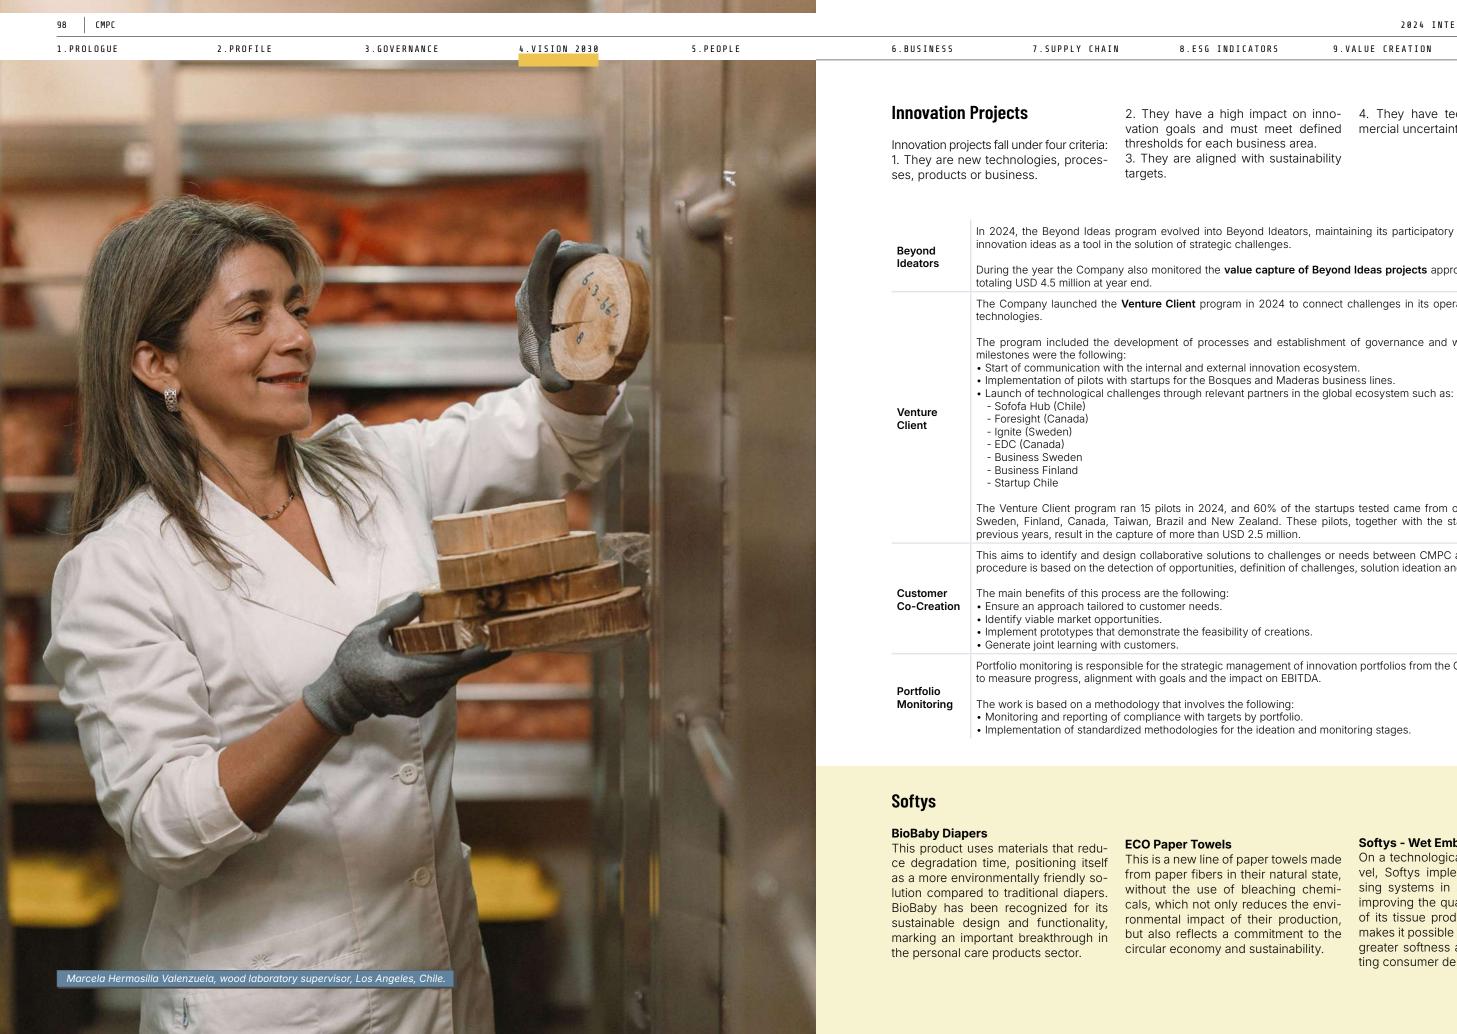

In operational terms, it reached the daily production target in 113 days, exceeding the initial projection of 180 days. The Company completed project implementation in 27 months, with a budget variance of less than 2%. In terms of safety, it reported an accident frequency rate of 0.3 and only 6 lost-time accidents, the best safety performance for a cellulose project in Brazil.

In recognition of its management and results, the Project Management Institute (PMI) distinguished BioCMPC as the Best Engineering and Construction Project of the Year.

"Coordination between the project team, contractors and operations personnel was key to maintaining safety and business continuity. In some periods, more than 3,000 workers occupied almost all the available space in the factory without affecting production. Achieving this level of integration and efficiency on a project of this magnitude demonstrates the team's ability to adapt and implement with precision."

> Gabriel Navarrete, Engineering and Projects Manager, CMPC Pulp.

5.PEOPLE

FOR

**30 INNOVATIONS** 

# **Implementation of Bioway** in Road Stabilization

As part of its strategy to optimize road construction and maintenance, CMPC explored alternatives to reduce the use of aggregates in soil stabilization. It collaborated with Hydra Research, a startup that developed Bioway, a biopolymer synthesized from bacteria capable of agglomerating soil particles and improving their structural strength.

The stabilization of roads in the Forestal Mininco road network requires large volumes of aggregates, which represent a significant percentage of the total cost. The application of Bioway led to a reduction of up to 90% of the need for aggregates, directly impacting construction costs. The Company estimates a total reduction of between 35% and 65% in the cost per kilometer built.

The project was developed in conjunction with CMPC's road area, which contributed its expertise in road engineering, while Hydra Research provided the biotechnological solution. The project ran field tests to evaluate its performance in different climatic conditions and soil types.

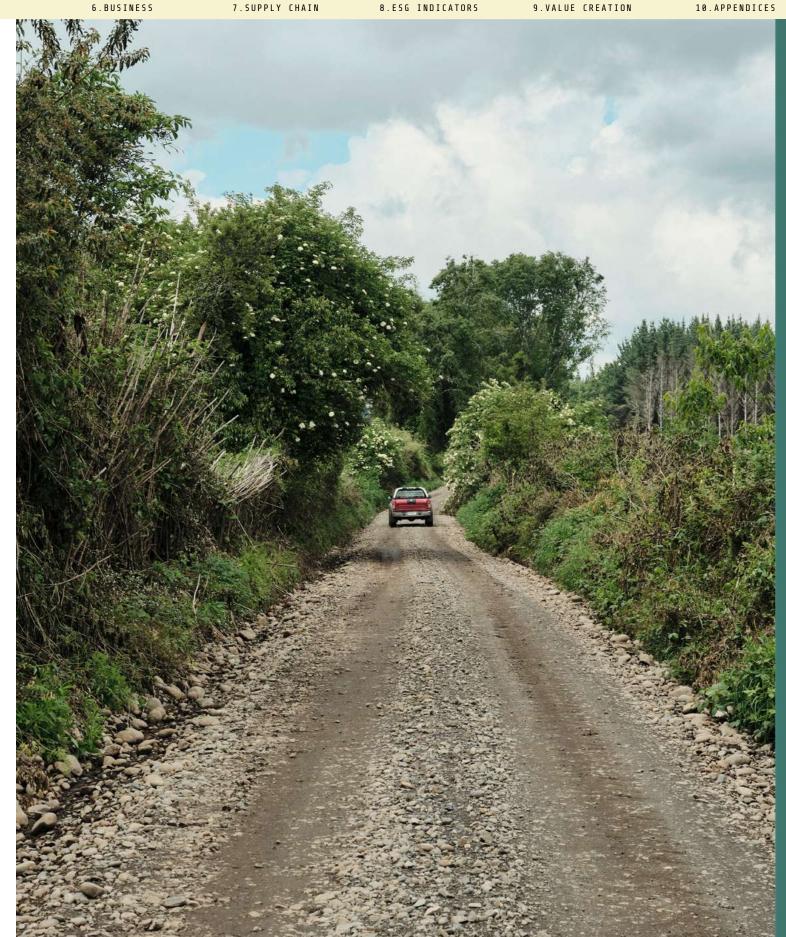

# To date, it has stabilized approximately 160 kilometers of roads with this technology, achieving a cost reduction of close to USD 2.4 million.

In addition to cost optimization, the reduced use of aggregates decreased the demand for transporting materials, reducing the circulation of dump trucks between plants and projects. The construction of one kilometer of road previously required around 300 truck trips, generating impacts on road safety, emissions and dust generation in rural areas. With the implementation of Bioway, these logistics were significantly reduced, reinforcing CMPC's commitment to sustainability and operational efficiency.

"Working with CMPC was a key collaboration. It was not just about implementing a product, but about developing a solution together. Through working groups, we combined our experience in biotechnology with technical knowledge in the area of roads. The application of Bioway led to a 90% reduction in the use of aggregates, optimizing costs and minimizing the logistical **impact.** This experience shows that the synergy between startups and large companies can generate

efficient solutions adapted to specific needs."

> Jonathan Henríquez Chief Executive Officer, Hydra.

# **CMPC Leads in Innovation** in the Most Innovative **Companies in Chile Ranking** 2024

MIC Business Consulting, El Mercurio and ESE Business School held the fourteenth edition of the le Ranking 2024, which recognizes the most innovative companies in the country for their ability to adapt and lead in a dynamic setting.

e buildina. Los Anaeles. Chil

In this version, CMPC won first place in the "Cellulose, Paper and Forest Derivatives" category, standing out for its innovation within the industry.

This award evaluates the maturity level in innovation and efficiency through variables such as strategic definition, senior management ment, innovation culture, allocated budget, processes and measurable impact on value.

# **R&D** and **Bioeconomy**

CMPC invests in medium- and longterm opportunities that add value from planted forests to its customers and global partners.

In 2024, CMPC reorganized its R&D team, adopting a model based on specific functions rather than a country structure. This change optimized task specialization and management.

The team can tackle more complex projects, from initial research to implementation of solutions in collaboration with strategic partners and clients.

This area provides technological solutions to CMPC and its customers, with an integrated short- and long-term vision aligned with the 2030 Strategy.

In 2024, it structured its first portfolio of integrated projects and established Fluxo, a process for gathering ideas and approving R&D projects and analytical services for CMPC and its customers.

CMPC managed a portfolio of 50 projects, aligned with its roadmap guidelines, competitive contracts and customer demand. These initiatives optimize resources, reduce costs and generate strategic options for the Company.

The portfolio is divided into the following 4 main areas:

1) Innovation Management, 2) Forest Genetics and Improvement, 3) Management, Ecophysiology and Cellulose, 4) Paper and Biorefinery.

# R&D worked on two relevant milestones in 2024:

# **R&D** Center Renovation

CMPC is developing an architectural renovation project for its R&D Center at the Santa Fé Plant in Chile. The initiative includes the expansion and improvement of laboratories, offices and spaces designed to enhance collaboration internally, as well as with customers and strategic partners.

# Investment in Innovation

FSG (6)

# In 2024, the Company worked on around 50 R&D projects.

Claudia Martínez Sandoval, chemical analyst, research, Santa Fé plant, Chile

# **R&D to Address**

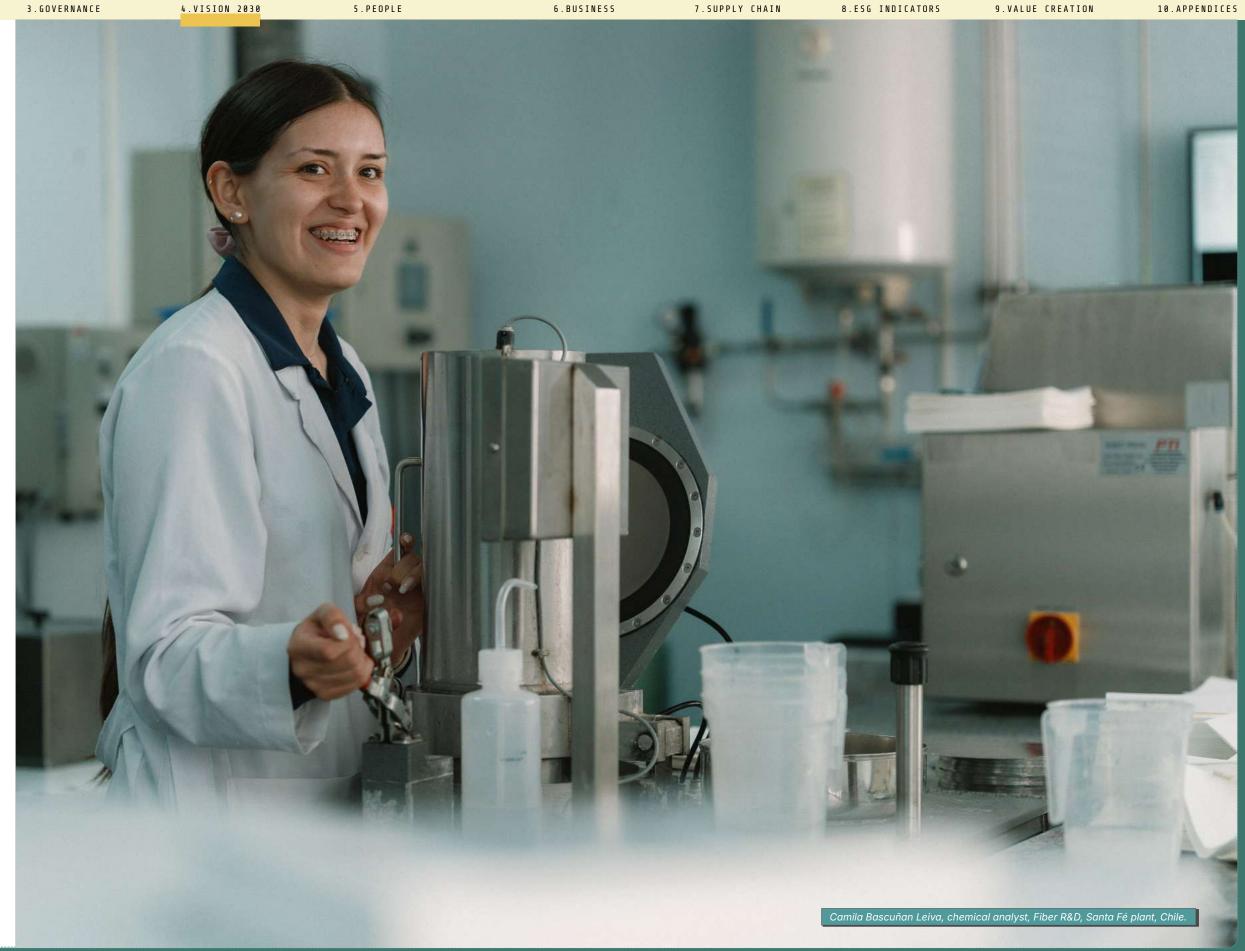

**Climate Change** 

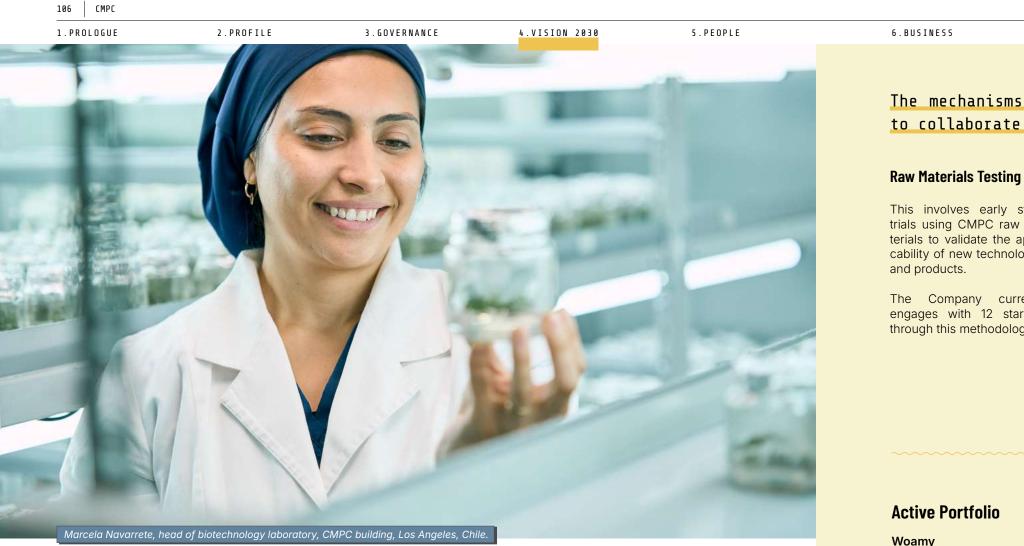

In 2024, CMPC began work in Chile and Brazil to develop eucalyptus species that are more resilient to climate change, adapted to extreme conditions such as frost and high temperatures. This effort seeks to ensure the future productivity of the resource to address climatic challenges that threaten its availability.

Research focuses on maximizing wood production in the areas already available. It uses the concept of Average Annual Growth (IMACEL in Spanish), which measures cellulose production efficiency in terms of mass, prioritizing those species that maximize growth measured in metric tons of cellulose per hectare.

In addition, the Company implemented a cross-functional climatology group focused on monitoring water consumption and climate change impacts. This team studies historical data on water consumption by trees and analyzes how climatic variations, such as lack of water or extreme events, affect forests and operations.

This project, like other R&D projects, has a long-term focus and is an ongoing effort. These developments maintain CMPC's competitive edge and ensure the long-term sustainability of its operations.

# **CMPC Ventures**

CMPC Ventures is in charge of accelerating the incorporation of technologies and developing new products and business lines that go hand in hand with disruptive startups related to fiber and forests, to diversify and complement its and dealflow opportunities. value offering in the future.

To develop its objectives, it carries out initiatives to:

• Connect with the entire CMPC ecosystem. • Liaise with the innovation teams from all business lines.

 Accelerate the growth and consolidation of each solution, opening markets and supporting scaling.

• Facilitate CMPC's implementation of pilots and tests.

 Collaborate with experts to contribute to R&D efforts.

its presence in the European startup ecosystem, consolidating its position as one of the leading Corporate Venture Capital (CVC) Funds in bioeconomy, with a special focus on Nordic countries and other regions of Europe. Through strategic partnerships between Venture Capital (VC), CVC and other partners, the Company expanded its access to new co-investment

In 2024, CMPC Ventures strengthened

During the year, CMPC Ventures evaluated more than 550 startups and maintains active relationships with more than 30 operational partners in different countries, who support the scouting process and promote innovation.

It also expanded its international presence, consolidating its presence in strategic regions such as Europe and Silicon Valley, USA.

This expansion has enabled its par-

ticipation in exclusive innovation and bioeconomy events, strengthening its position as a benchmark in biorefineries and forest-related technologies.

# Portfolio

CMPC Ventures' diversified portfolio, managed through various collaboration mechanisms with startups, has strategically positioned CMPC to explore new opportunities, maximizing its potential for future growth and innovation. This process preserves the independence and agility of the startups, with 39 of them in the portfolio.

# The mechanisms developed by CMPC Ventures to collaborate with startups are:

7.SUPPLY CHAIN

This involves early stage trials using CMPC raw materials to validate the applicability of new technologies

The Company currently engages with 12 startups through this methodology.

There are currently five partnerships underway through this mechanism.

Woamv is a spin-off of Aalto University in Finland. It develops fully bio-based and biodegradable foam from Kraft pulp. These are used to replace polystyrene, which is a petroleum derivative.

# Pulpex

Pulpex manufactures pioneering biodegradable cellulose bottles and containers without plastic barriers for multiple uses, including liquids, developed in collaboration with leading global brands.

Located in England, it is currently focused on expanding its production.

# Rubi

This company is located in San Francisco, USA, and develops enzymatic biocatalysis technologies for the production of cellulose from carbon sources such as methanol or CO<sub>2</sub> emissions and Germany. for use in the textile industry.

# Boxia

This is a marketplace for corrugated cardboard packaging products. It operates in Mexico and acts as an intermediary between buyers and producers whose value offer is the possibility of automating document transactions and processes. It is CMPC's only 100% digital business, developed as a Company Builder initiative.

# Strong by Form

This company uses additive manufacturing technology for the creation of lightweight structural solutions, combining the sustainability of wood with the performance and productivity of composite materials.

This adapts the mechanical performance of the component to unprecedented levels, with the appropriate density, fiber orientation and thickness required by the component. It is based in Chile

# **Venture Client Program**

In 2024, it developed 15 pilot projects.

# **Strategic Investments**

The Company continues to develop strategic investments in startups that are aligned with its long-term vision.

Seven strategic investments have been developed to date.

# Modvion

This Swedish company innovates in laminated wood structures for the construction of wind towers. Its technoloav makes it possible to manufacture high-strength modular structures, reducing logistical costs and greenhouse gas emissions compared to traditional materials.

These wood towers offer optimized structural performance by adapting fiber orientation and design to maximize stability and durability.

# Nordic Bioproducts Group (NBG)

This Finnish company develops Aaltocell technology for a more sustainable production of wood cellulose-based biomaterials. NBG is currently focused on expanding its production of microcrystalline cellulose (MCC), primarily for the pharmaceutical, foodstuffs and cosmetics industries.

Additionally, in 2024 CMPC completed the Norratex project, which developed cellulose applications for textile fibers.

# Investment in New Wood-Based Construction Technologies

CMPC Ventures invested in the Swedish company Modvion, which is developing a technology for the construction of wood-based wind turbine towers, using curved LVL.

Through this minority investment, CMPC aims to promote the development of these new sustainable wood construction technologies as part of the transition towards the use of renewable energy with renewable materials.

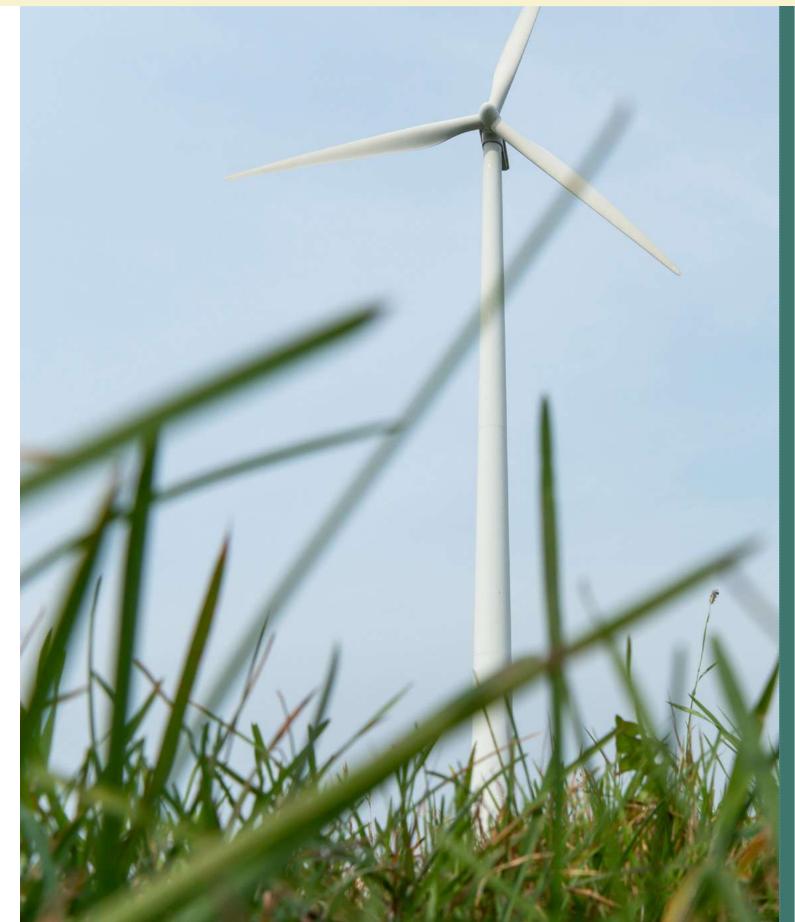

Designed with a modular system, the towers facilitate transport and assembly in hard-to-reach locations. Its manufacture with laminated wood optimizes structural strength and reduces weight compared to steel.

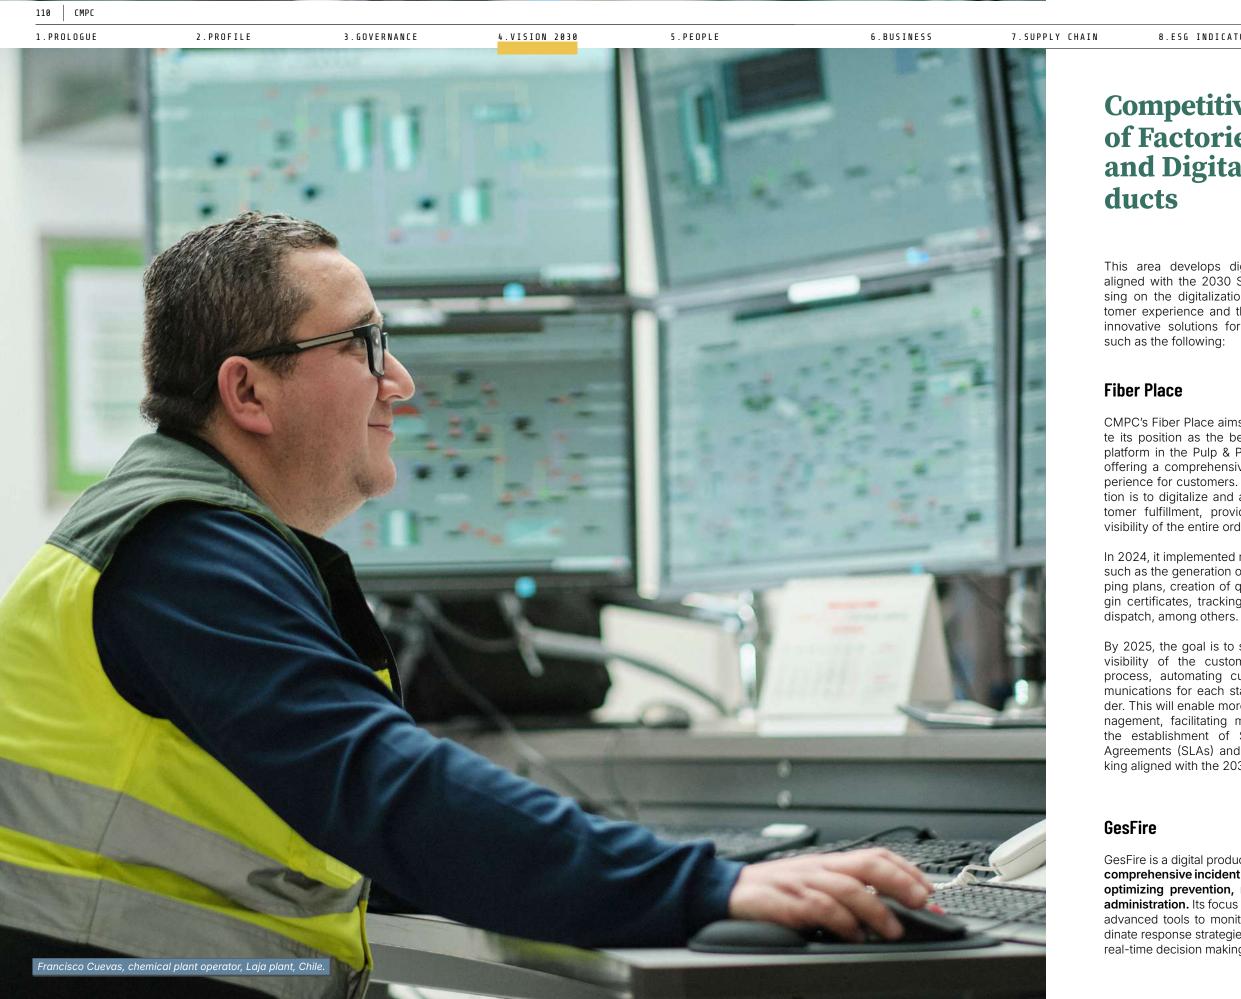

Beyond logistical and constructive efficiency, this technology contributes to the reduction of  $CO_2$  emissions and to the sustainability of the energy sector. The wood used in the towers stores carbon and generates lower emissions in its production than other materials.

Modvion is currently making progress in the preparation of the construction of its new industrial plant in Europe to increase tower manufacturing capacity. "By combining innovation and sustainability, Modvion is paving the way for the future of wind energy, and CMPC is a key partner in this process. **The expertise and support of the CMPC team are critical to Modvion's global expansion** and to demonstrate the enormous potential of wood in this area".

# **Sara Woodgate** Communications Manager, Modvion

# Competitiveness of Factories and Digital Pro-

This area develops digital products aligned with the 2030 Strategy, focusing on the digitalization of the customer experience and the creation of innovative solutions for the industry,

CMPC's Fiber Place aims to consolidate its position as the benchmark B2B platform in the Pulp & Paper industry, offering a comprehensive tailored experience for customers. Its main function is to digitalize and automate customer fulfillment, providing real-time visibility of the entire order process.

In 2024, it implemented new functions, such as the generation of claims, shipping plans, creation of quality and origin certificates, tracking for domestic

By 2025, the goal is to strengthen the visibility of the customer fulfillment process, automating customer communications for each stage of the order. This will enable more efficient management, facilitating measurements, the establishment of Service Level Agreements (SLAs) and decision making aligned with the 2030 Strategy.

GesFire is a digital product designed for comprehensive incident management, optimizing prevention, response and administration. Its focus is on providing advanced tools to monitor risks, coordinate response strategies and facilitate real-time decision making. Thanks to its

modular architecture, it adapts to different operational needs, ensuring that prevention and operations teams have accurate information to reduce reaction times and minimize damage.

In 2024, the product's vision evolved into a comprehensive incident management platform, which allowed CMPC to receive recognition for Best Project in Social Management, awarded by the Chilean-British Chamber in the 15th edition of the Recognition of Innovation and Management in Sustainability 2024.

In 2025, development will focus on making GesFire a globally adoptable product, prioritizing process standardization and optimization. Major milestones include user profiling and authentication in any domain, cloud map integration, resource management and an Al-based recommendation system.

# **Sustainability** Strategy and Customer Value

In 2024, CMPC launched its new Customer Sustainability Strategy for its Pulp business line. This strategy has four pillars:

1. Customer value

6.BUSINESS

- 2. Training and education
- 3. ESG environment
- 4. Communications

a) Customer value: identifies and responds to customer needs. Some of the elements and initiatives in this dimension are:

- Partnerships and collaborations with
- a focus on sustainability.
- Cases of social and environmental impact.
- Environmental product declarations. • Response and support for upcoming
- ESG regulations.
- Scope 3 greenhouse gas emission data and roadmap.

The Company proposes to strengthen its relationships with customers and suppliers through partnerships designed to address the most pressing sustainability challenges, joining forces and expertise to achieve common goals and accelerate the speed and scale of actions. The strategy is based on transparent access to high-quality data, the incorporation of best practices and the sharing of experiences, accelerating the implementation and scale of actions.

When evaluating the main attributes they consider at the time of purchase, customers ranked sustainability as the fourth most important factor (32%), after quality (97%), price (94%) and on-time delivery (60%).

10.APPENDICES

# b) Training Pulp's sales and marketing teams

In 2024, more than 50 people Marketing and Communications teams took WBCSD's "In-Business" online course. The course included the following: · Context about the world of

- porate sustainability.
- forming knowledge into practice.

CMPC has identified gaps in the understanding of sustainability and improve their autonomy in consultations. It also promotes grams for strategic positions in Europe, expanding managened with these principles.

c) ESG environment: strengthens collaboration with external stakeholders beyond its direct customers, through participation in associations, memberships and joint initiatives. This approach generates a broader impact through collaborative efforts that enable simultaneous interaction with multiple customers and other key players within the ecosystem. These partnerships are not limited to internal initiatives; CMPC joins larger projects led by third parties, contributing to common sustainability goals. In addition, its communication strategy includes dissemination in international forums and spaces.

d) Communications: Pulp engages with its customers through more than ten channels. In 2024, the Company prioritized the most relevant ones and chose to concentrate its dissemination through three strategic channels. This decision aims to optimize the impact of the message, ensuring coherence and alignment with the sustainability agenda.

In addition, in 2024 Pulp incorporated three new sustainability-related questions into its customer surveys to provide a better understanding of the growing importance of sustainability in its business and operations. Of a total of 155 responses, 95% of customers stated that sustainability is of high importance and is integrated into their decision-making processes.

In terms of priority sustainability issues, customers identified environmental issues as the most relevant, indicating that the following were the areas of greatest interest:

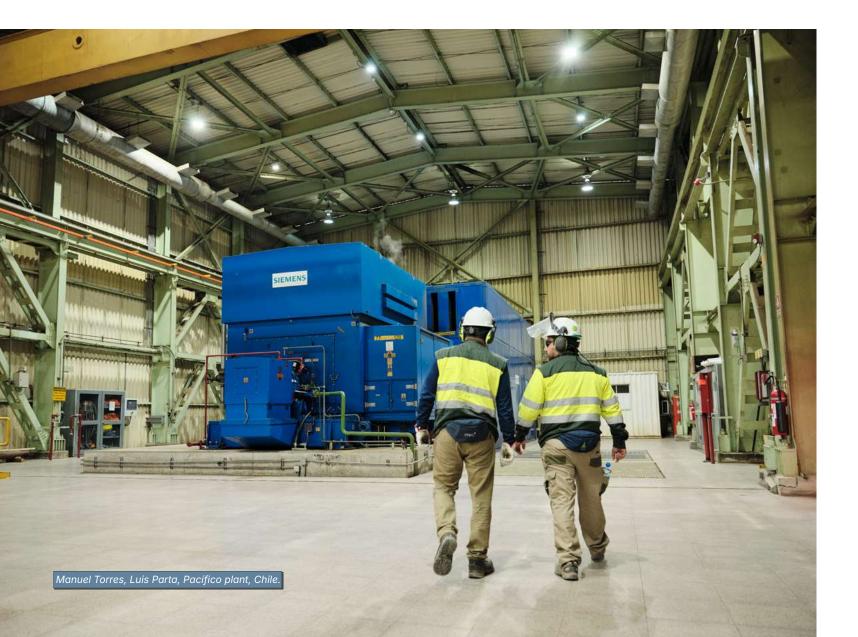

- Waste and circular economy (72%)
- Climate change (65%)
- Biodiversity and nature (54%)

GRI (201-1)

The year 2024 was characterized by a complex macroeconomic situation, with inflationary pressures that have yet to fully stabilize and an exchange rate volatility that affected the Company's bottom line.

The global geopolitical context affects the economies of various markets and along with it the consumption of goods and services. In response, central banks have deployed measures to stabilize the economy and inflation. The behavior of interest rates has been divergent and varies based on the conditions in each country.

The European Central Bank cut its interest rate at the end of the first half of the year, after peaking at 4.5% in 2023. This measure sought to stimulate economic activity in the eurozone, which had shown signs of slowdown in key sectors such as industry and services.

Despite economies' efforts, risks persist and factors such as geopolitical uncertainty, trade tensions and vulnerabilities in some emerging economies maintain a level of caution among investors and policymakers.

With these challenges, 2024 marks a turning point towards a more stable macroeconomic environment, with positive medium-term expectations.

# Industry Context and Key Results

The year 2024 took place in a context of increased supply from other producers in the cellulose industry, as well as an expansion of CMPC's capacity in Brazil, with the entry into production of its BioCMPC project.

In terms of markets, activity weakened in the second half of the year, resulting in lower cellulose prices. In this context, the Company aimed to increase its competitiveness, which was reflected in lower operating costs and containment of other costs and expenses.

on the construction sector.

ROLOGUE	2.PROFILE	3.GOVERNANCE	4.VISION 2030	5.PEOPLE	6.BUSINESS	7.SUPPLY CHAIN	8

# Approach to Tax

GRI (207-1)

CMPC has a public tax compliance strategy, approved by the Chairman of the Board, the Chief Executive Officer and the Chief Financial Officer. This strategy reflects a responsible and transparent approach that is aligned with the tax laws and regulations of the tax authorities and with the guidelines of the Organization for Economic Cooperation and Development (OECD).

The strategy focuses mainly on the following:

• Monitoring and identifying regulatory changes: overseeing tax reforms and regulations issued by national and international entities to ensure strict and timely compliance.

• **Transparent management:** since 2021, the General Principles of Tax Management have been applied to all jurisdictions where the Company operates, covering taxes, collections, payments, charges and withholdings.

A centralized team oversees to ensure that related party transactions comply with OECD guidelines, ensuring that they are conducted in accordance with the creation of value, functions, assets and risks involved.

# Governance

GRI (207-2)

The Accounting and Tax Department is responsible for implementing and supervising the tax strategy, ensuring compliance with tax obligations and avoid tax risk. This department ensures that the Company's tax practices are aligned with the guidelines of the Tax Compliance Approach, particularly in relation to transparency and ongoing improvement.

As part of this approach, CMPC is committed to do the following:

Comply with all tax laws and regulations in all countries where it operates.
Not transfer any value created to low or no-tax jurisdictions without a sound

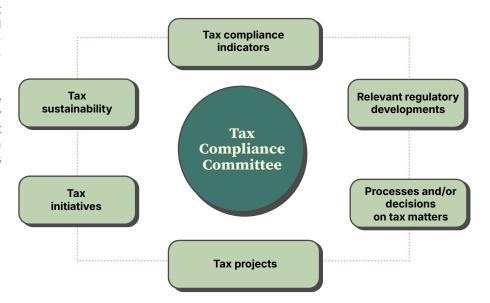

and legitimate business reason.Not use tax structures without a

sound and legitimate business reason.
Perform all intra-group transactions under transfer pricing rules, using the Arm's Length principle as a guideline.

The Company also has a **Tax Compliance Committee**, comprised of tax leaders and the area manager. This committee is responsible for the following actions:

• Adopt fiscal decisions based on technical analysis and risk assessments. If necessary, it seeks the opinion of external advisors, whose recommendations are approved by the committee.

Monitor tax compliance, ensuring that tax obligations are met in a strict and timely manner, in addition to evaluating legislative changes, tax reforms and tax contingencies, assessing the best strategies to deal with them efficiently.
 Evaluation and monitoring of controls, ensuring regulatory compliance standards and fiscal efficiency.

CMPC's financial statements are audited annually, including a review of tax assessments. In 2024, KPMG was responsible for this process.

In addition, on a global level, the Company develops review processes for income tax returns, transfer pricing, indirect taxes and income tax provision with external tax advisors.

The area documents and updates its procedures periodically. In addition, a governance risk compliance (GRC) matrix is in place to monitor the implementation of controls. To strengthen management, the Company implements ongoing training, automates processes and carries out permanent reviews, all with a strategic focus to mitigate risks in the multiple processes in which the tax area participates. The tax and transfer pricing team provides internal training as part of the tax update process. These instances not only ensure up-to-date knowledge on tax matters, but also promote engagement with stakeholders and trends in the sector.

# Tax and **Stakeholder Engagement**

GRI (2-26, 207-3)

CMPC maintains a collaborative relationship with the tax authorities based on respect for the law, transparency and good faith. This approach is reflected in the following:

• Strict compliance with tax obligations, ensuring that all relevant information is provided to the competent authorities and agencies for the proper processing of transactions.

• Rejection of tax structures without legitimate commercial justification, ensuring that all transactions have a solid economic substance.

 No transfer of value created to low or no-tax iurisdictions. without clear economic rationale.

• Application of the Arm's Length principle in all transactions between related companies, ensuring market-based prices and conditions.

CMPC contributes to the creation of a fiscal environment that favors responsible investment and sustainable growth, aligning its fiscal interests with public policies that promote social and economic wellbeing. This includes their participation in discussions on tax reforms or regulatory changes, as well as in the adoption of best practices in socially responsible taxation.

<sup>6</sup> In 2024 there was a significant depreciation of the Brazilian real against the US dollar (the closing exchange rate fell 12.53%) which generated an increase in the value of deferred taxes in the year, the opposite of the situation that occurred in 2023.

Source: Accounting and Tax Department.

# In 2024, income taxes paid were USD 333 million, a decrease of 32% compared to 2023. The consolidated effective tax rate in 2024 was 36.19%, higher than the rate of 20.35% in the

# **Stakeholder Engagement**

2024 the Accounting and Tax Management Department held a series of talks called "Connecting with the Community", aimed primarily at sharing best mation with stakeholders such as artisans, small suppliers, and reinforced compliance with tax obligations and emphasized the in the business world.

# Tax Sustainability

CMPC ranked first in the Tax nies with the largest stock market presence in Chile. This index was developed by the Pontificia raíso (PUCV) and is based on

# Green **Taxes**

CMPC's operations in Chile and Mexico are subject to green tax payment based on current legislation and regulations.

CMPC (4)

# Chile

Since 2017, Law No. 20,780 on the Green Tax on Fixed S Emissions has been in force, which establishes an annual c in tax benefit for air emissions of particulate matter (PM), nit oxide (NOx), sulfur dioxide (SO<sub>2</sub>) and carbon dioxide (CO<sub>2</sub>).

This tax applies to establishments whose fixed sources, cons of boilers or turbines, individually or as a whole add up to a greater than or equal to 50 MWt.

In 2024, CMPC paid taxes correspon- amount paid in the first year of appliding to 2023 totaling USD 5,488,843.85, cation of this law (2017, paid in 2018), which represents an increase over the when tax amounted to USD 3,735,979.

Source: Accounting and Tax Department.

In 2024 there was an increase in green tax revenue in Chile, generated by amendments to Tax Modernization Law No. 21,210, with changes to the tax base introduced by the law, incorporating new emissions and taxable items.

In Mexico, the Company identified that a portion of the reported green taxes corresponded to a permit granted by Aquas Nacionales for the disposal of water for irrigation purposes. As a result, there has been a decrease compared to previous years, since this item

has been eliminated from the total corrective tax calculation.

Although the concept of green taxes or taxes associated with environmental issues—also exists in other countries of operation, they are not applicable to the Company.

# Sustainable Financing: Green Bond Tied to CMPC Indicators

CMPC implemented the Sustainability-Linked Green Bond, a financial mechanism that combines the Use of Green Funds, aligned with the Green Bond Principles, and indicator-linked financing elements, in accordance with the Sustainability-Linked Bond Principles. This structure is part of CMPC's Sustainable Financing Framework.

The bond has two main objectives: to demonstrate CMPC's commitment to sustainability goals and to strengthen relationships with investors interested in sustainable financing. This issue represents the second publicly referenced transaction of this type.

CMPC was the first issuer in Latin America to use a structure that integrates both approaches. In its most recent version, the transaction accumulated USD 2.5 billion in orders, with a 5-fold oversubscription, reflecting the market interest. The issue included significant participation from fund managers, insurance companies and pension funds.

The bond has environmental impact metrics for the Use of Green Funds and greenhouse gas emissions, as well as circular economy and sustainable environmental management criteria. CMPC publishes an annual impact report, detailing the performance of its green and sustainability-related bonds. "BNP Paribas has worked with CMPC on multiple transactions with sustainable labels since the market's inception. **CMPC has been a pioneer and innovator in the market, using a holistic approach to sustainable finance**, linking many of its sustainable investments and corporate goals to its capital market operations.

Working on sustainable finance, especially on products such as the "hybrid" Sustainability-Linked Green Bond, requires additional efforts, coordination and resources. CMPC continues to be present in conversations with global leaders in sustainable finance and other key players in the space, due to **its commitment to promoting sustainability in Latin America and beyond.**"

> André Rochette Investment Banking Director, BNP PARIBAS

---	---

# **Contractors**, Strategic Partners

NCG 461 (5.9) GRI (2-8)

CMPC guidelines regarding working with contractors can be found in the Subcontracting Policy. This regulates the percentages of work that may be delegated to service providers and specifies that the Company does not permit the subcontracting of 100% of its activities.

## 2024 Contractor Snapshot

The main tasks carried out by service providers are the following:

**Machine operators** 

**Industrial cleaners** 

**Chainsaw operators** 

Maintenance

**Risk prevention advisors** 

Support to firefighters

THE BIO-FUTURE

**30 INNOVATIONS FOR** 

## Female Crane Operators

In 2024, the Company developed the "Operación de Grúa Horquilla" course as part of the Siembra Mujeres Grueras Program. This program provides women with the knowledge and skills necessary to operate and drive this type of heavy machinery safely under the current legal regulations of the Ministry of Transportation. It also supports them in obtaining their class D driver's license.

The course benefited 40 women from Puente Alto and Buin, Chile. To overcome traditional barriers, entry requirements were made more flexible, while ensuring that participants received adequate training in conjunction with the operations area.

"When I was looking for a job, I went to OMINT to drop off my resume and they told me about the course. I accepted immediately because it represents an opportunity to enter a male-dominated field. This initiative tears down stereotypes and provides jobs in an industry that previously felt inaccessible."

> **Marjore Garcia** Buin Plant, CMPC

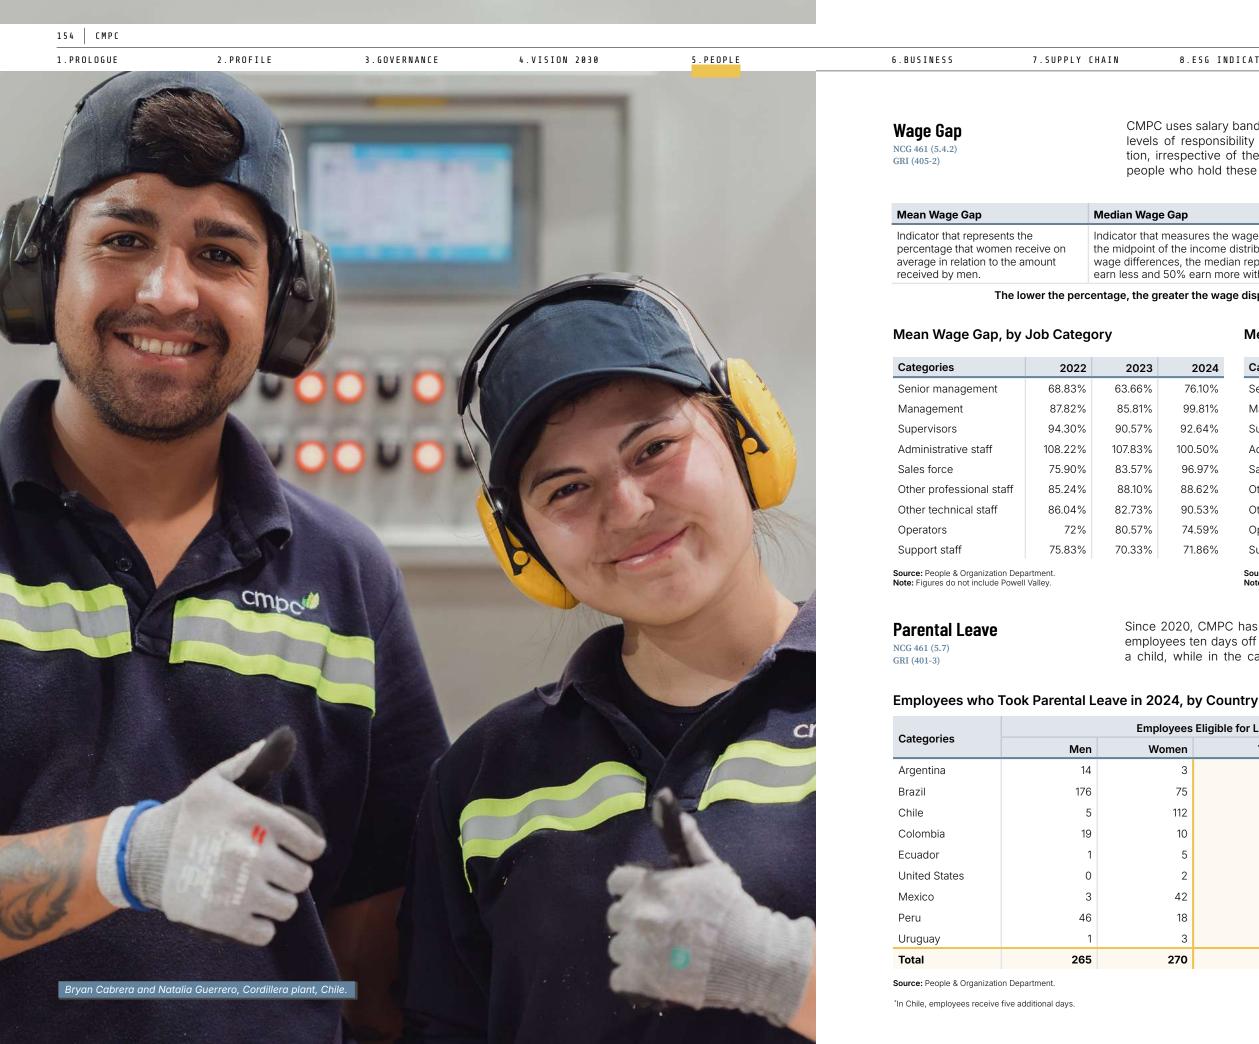

"The professors have trained us and helped us to learn in a controlled environment. I am grateful for the job opportunity, since work is scarce in Buin and this experience represents both professional and personal growth."

> **Jenifer Bayer** Buin Plant, CMPC

9.VALUE CREATION

9.VALUE CREATION

10.APPENDICES

CMPC uses salary bands based on the levels of responsibility for each position, irrespective of the gender of the people who hold these positions. This

methodology serves as a basis for addressing wage gaps, reducing the possibility of generating differences when defining remuneration.

Indicator that measures the wage difference between men and women, taking as a reference the midpoint of the income distribution. Unlike the mean, which considers the average of all wage differences, the median represents the central value, i.e., the point where 50% of people earn less and 50% earn more within each group.

#### The lower the percentage, the greater the wage disparity in favor of the higher income group.

#### 2024 Categories 2022 2023 2024 86.44% Senior management 73.86% 67.65% 93.31% 80.70% 99.54% Management 94.48% 91.48% 95.85% Supervisors Administrative staff 113.36% 160.59% 93.12% 87.65% 77.20% 70.45% Sales force 83.24% 83.55% 88.06% Other professional staff 76.55% Other technical staff 85.85% 83.33% Operators 69.07% 87.10% 74.85% 74.53% 76.03% 66.15% Support staff

## Forestry Sector Wage Gap Calculator

CMPC and Corporación de la Madera (CORMA) are developing a wage gap calculator for the forestry sector. The initiative aims to establish a mechanism to measure and analyze differences in economic compensation between men and women in companies in the industry.

The project is carried out in collaboration with the Universidad de Talca, the institution responsible for the research and methodological design of the tool.

Once completed, the calculator will allow any company to define action plans based on the results obtained. The information gathered will help companies to establish strategies aimed at reducing wage differences within their structures. The initiative is part of the sector's efforts to generate tools that facilitate the identification of gaps and the implementation of measures to reduce them.

"This initiative demonstrates how companies in the forestry sector can work together to address a common challenge, even if they are competitors. Working groups made it possible to align criteria and share information, leading to progress on the development of the wage gap calculator. This process not only facilitates measurement, but also **sets a precedent for collaboration in the industry, showing that it is possible to generate collective tools to address cross-industry challenges.**"

## **Prevention** of Workplace and Sexual Harassment and **Violence in the Workplace** NCG 461 (5.5)

CMPC manages and prevents workplace and sexual harassment and violence in the workplace through different policies and procedures. These include the following:

• Code of Ethics: this expresses the commitment to respect people, regardless of their relationship with the Company.

· Internal regulations on order, hygiene and safety: these establish a zero tolerance policy against any form of violence or discrimination. In 2024, the Company updated its regulations to incorporate the action protocols required by Law No. 21.643 on the prevention, investigation and penalization of workplace harassment, sexual harassment or violence in the workplace.

Complaints in these areas are received and handled through the Grievance Hotline, a tool that anyone

can use to report incidents or behavior that constitute a violation of the Company's principles and values, corporate rules or applicable law. Upon receiving a complaint on the aforementioned matters, the team assesses the need to implement protective measures for the victim.

The above is described in the Manual for Management of Complaints and Internal Investigations, a document that establishes the guiding principles for internal investigations. Based on the manual, the Company conducts investigations as swiftly as possible under the principles of confidentiality, bilaterality, documentation, impartiality, objectivity, legali-

ty, care and respect for individuals. These have a maximum term of 30 days and if allegations are proven, the Company implements corrective and disciplinary measures that are proportional to the seriousness of the events.

#### Workplace ha Filed by wome

## Harassment Training

NCG 461 (5.5)

The Company has a training program on workplace harassment, sexual harassment and workplace violence. This program is developed remotely through the Mi Fibra portal, available to its own worforce, in addition to on-site training at CMPC plants.

Trainings follow a program framed within the application of the Diversity and Inclusion Policy that establishes a cultural and legal perspective regarding harassment in the work context. It also highlights the relevance of the Grievance Hotline as a channel for resolving these possible situations.

# 5.3 Talent Nanagement

CMPC's 2030 Strategy has a Talent pillar that describes the relevance of developing people to be enablers of transformation and organizational growth, addressing current and future challenges. To this end, it focuses its activities on the following three main areas:

3.GOVERNANCE

**Remaining people-centered** 

Preparing talent for growth in strategic geographies

Enabling transformation in 3. the organization

# Training NCG 461 (5.8.ii)

Talent management is presented as a commitment and is an enabler of the other pillars of the 2030 Strategy.

While the Company works on talent on different levels, it manages cross-functional cultural evolution to generate a way of being, acting and leading that is consistent with its values. This culture positions CMPC as an attractive organization for current and new talent, promoting their training and development.

### **Empowering Leadership**

To strengthen talent within the organization, in 2024 CMPC continued to develop the LiderazGo program, which aims to strengthen leadership skills, adapting them to the needs of each hierarchical level, from supervisors to plant managers.

The program involved 904 employees and focused on incorporating practices aligned with the Best management system, promoting a culture of effective and strategic leadership and management in the Company. This is developed through the following:

- Connecting around a common purpose.
- Putting people at the center.
- Building business excellence.
- Driving sustainable growth.
- Developing talent.

#### Training Areas

NCG 461 (5.8.iv) GRI (404-2)

CMPC has four training areas designed to integrate talent management processes and strengthen the skills and knowledge of its teams. These areas are incorporated into the Mi Fibra portal and are available to its employees.

-	Certifications	Behavior	Functional and Technical	Method
- - t 2	Focused on regulatory standards, certifications and auditing processes.	Focused on leadership, culture, work climate and performance actions.	Development of skills and technical projects aimed at the needs of the operations.	Articulated training actions that strengthen common objectives, efficient processes and ongoing improvement.

# 5.5 DEEUDAIDUAL Izalib and Safziy

# Occupational Health and Safety Management System (OHSMS)

GRI (403-1)

CMPC has an Occupational Health and Safety Management System that covers all its direct employees and contractors, aligned with international standards in this area, including the ISO 45001:2018 standard that identifies, evaluates and manages occupational risks, promoting ongoing improvement and prioritizing a safety culture in the organization.

# Corporate Occupational Health and Safety Policy

3.GOVERNANCE

In June 2024, the Company formalized its first Corporate Occupational Health and Safety Policy. This policy covers all of the company's business areas, both in Chile and in its operations abroad.

During the second half of the year, CMPC worked on the document's communication strategy, which will be implemented in the first half of 2025. Similarly, Softys' management system incorporates international standards such as the British Standards (BS) and the Occupational Safety and Health Administration (OHSA) to reaffirm its commitment to operational excellence and the wellbeing of its employees and contractors.

In addition, the Company complies with the requirements established in Chilean legislation and responds to the provisions of Supreme Decree No. 44, which requires organizations to have mechanisms in place to prevent occupational risks, protect workers and ensure compliance with applicable regulations. In areas where it applies, the Company incorporates the provisions of Supreme Decree No. 76, which establishes additional guidelines for risk management in the workplace.

# Joint Committees and OHS Risk Identification

#### GRI (403-2; 403-4; 403-7)

CMPC employees participate in Joint Committees through consultation processes and the organization of working

The different CMPC business areas and lines develop particular methodol-

Business Area or Line	Identification Methodology	Main Risks Identified
Pulp	It uses hazard identification and risk assessment matrices (MIPER in Spanish), which are assessed annually through: • Safety Preventive Observations (OPS in Spanish) • Safety Preventive Inspections (PSI in Spanish) • Process Confirmations (CdP in Spanish).	<ul> <li>Works requiring isolation, blocking and verification of zero energies.</li> <li>Exposure to chemicals.</li> <li>Working at height.</li> <li>Working in confined spaces.</li> <li>Working in hot conditions.</li> <li>Lifting and loading.</li> <li>High-pressure power washing.</li> <li>Thermal overload.</li> <li>Electrocution.</li> <li>Excavation work.</li> </ul>
Bosques	It operates with the Safe Practice Index (IPS in Spanish), Safe Practice Observation (OPS in Spanish) and safety monitoring. It implements measurement through a digital dashboard that manages the data collected by the areas.	<ul> <li>Crushing.</li> <li>Cargo vehicle traffic accident.</li> <li>Falling from height.</li> <li>Ambush in the field.</li> <li>Uncontrolled rural fire.</li> <li>Burning of forestry machinery.</li> <li>Burns and/or asphyxiation from forest fires.</li> <li>Attacks due to rural violence.</li> <li>Traffic accidents.</li> </ul>
Maderas	It uses standards defined by the health and safety management system, certified by ISO 45001. It holds monthly meetings for areas, divisions and departments to leverage the improvement of the findings.	<ul> <li>Working at height.</li> <li>Working with suspended load.</li> <li>Hazardous atmospheres in confined spaces.</li> <li>Exposure to ionizing radiation.</li> <li>Contact with equipment with moving parts.</li> <li>Electrocution.</li> <li>Working in hot conditions.</li> <li>Exposure to high temperatures.</li> <li>Falling material.</li> <li>Working with pressurized equipment.</li> <li>Handling of manual equipment.</li> <li>Landslides and falls due to excavations.</li> <li>Entrapment by equipment on wheels.</li> </ul>
Biopackaging	It has procedures for hazard identification and risk assessment with multidisciplinary teams and specialists in each of the processes. It updates risk matrices and adopts initiatives on new improvements to make them safer.	<ul> <li>Lifting and suspended loads.</li> <li>Blocking and isolation.</li> <li>Working in hot conditions.</li> <li>Machinery entrapment protection.</li> <li>Electric shock.</li> <li>Operation of equipment on wheels.</li> <li>Passenger transportation.</li> <li>Cargo transportation.</li> <li>Fire and explosions.</li> </ul>
Softys	It uses the Softys Care Management System (SIGECUS in Spanish) standard, which makes an analysis through the Hazard Identification and Risk Assessment Matrix (MIPER), prepared in conjunction with the area personnel and approved by management.	<ul> <li>Entrapment by moving parts and pieces of equipment.</li> <li>Falling from height.</li> <li>Asphyxiation from confined space.</li> <li>Entrapment by self-propelled loading equipment.</li> <li>Crushing from lifting maneuvers.</li> <li>Electrocution.</li> <li>Fires.</li> </ul>

# CMPC's health and safety risk assessment and management standards extend to the contractors it works with.

#### **Risks and Injuries**

NCG 461 (5.6) GRI (403-6; 403-9; 403-10)

methodology.

Employees • Entrapment.

The main work-related injuries and risks that people are exposed to • Contact with electrical energy. in CMPC operations are identified • Simple contusions. through the Hazard Identification • Fractures.

and Risk Assessment Procedure • Blows to upper extremities. • Cutting wounds.

The main injuries and risks identified by the Company for its direct employees and contractors are the following:

• Crushing. • Falling from height.

Contractors

8.ESG INDICATORS

9.VALUE CREATION

10.APPENDICES

• Falling from the same level. Contact with chemical products.

• Intervention of moving equipment.

• Traffic accidents.

- Hand injuries.
- Sprains from falling on the same level.

• Contusions from impacts of traffic accidents.

To mitigate the risks and likelihood of occurrence of the above mentioned events, the company implements the following measures based on the control hierarchy:

- Elimination of sources of exposure.
- Equipment replacement.
- Application of engineering protections.
- Specific training.
- Operating programs.

# **Occupational** Health **Services**

GRI (403-3; 403-6)

Occupational health services play a strategic role in managing the health and safety of employees and contractors. As indicated in the ILO Occupational and Health Services Convention, these services correspond to essentially preventive functions, responsible for advising employers and workers on the requirements necessary to establish and maintain a healthy working environment, both in terms of physical and mental health.

Accident prevention and risk minimization is based on:

1. Identification: specialized assessments detect risk agents present in the work environment, whether physical, ergonomic or from exposure to harmful substances. This includes a detailed analysis of exposed employees and analysis of workplace conditions.

2. Mitigation and control: health teams design and implement preventive measures based on international and local standards, such as the PCM-SO in Brazil or the SIGECUS standard in Softys. These actions include ongoing monitoring, preventive training and the promotion of good practices.

3. Elimination: specific interventions, such as ergonomic adjustments led by physical therapy and ergonomics specialists and follow-up programs to reduce the incidence of occupational diseases.

Workers' access to health services is regulated by the legislation in force in each country.

# Health and **Safety Training**

GRI (403-5) FSG (28)

CMPC has training programs that create awareness in workers on the mitigation and elimination of risks and hazards associated with occupational health and safety. As with previous periods, in 2024, training was a cross-functional pillar of management.

During the year, in conjunction with the Asociación Chilena de Seguridad (ACHS), the organization conducted training sessions for the main representatives of the Occupational Health and Safety areas.

In addition, the Company's teams participated in basic fire extinguisher handling courses and training with augmented reality technologies on the use of defibrillators and CPR techniques.

### Implementation of the Tarjeta por la Vida at CMPC

CMPC implemented the Tarjeta por la Vida (Card for Life), a prevention mechanism that allows each worker to stop an activity in the event of an uncontrolled hazard. Carried throughout the day, the card includes a QR code for confidential and centralized reporting, ensuring transparency in risk management.

In April 2024, CMPC presented the initiative at the Safety Hour, when all facilities stopped operations for one hour to reinforce the commitment to safety.

3.GOVERNANCE

Since its implementation, 460 reports have been registered, of which 88% were resolved with short-term actions, guaranteeing safe operations. The remaining cases require investments (CAPEX) or the suspension of complex processes and are under management. While de-

finitive solutions are being implemented, the Company is applying control measures such as isolation of areas or equipment.

The Tarjeta por la Vida has prevented serious incidents and strengthened the safety culture at CMPC, ensuring safer working conditions.

"Every day we face different challenges and as prevention officers, we must always be attentive to the conditions of the environment and our work. During a scheduled maintenance at the Santa Fe 1 PGP drying area in August 2024, we realized that the working conditions had changed from the reported technical specifications.

We carried out an assessment with the work team and decided to use the Tarjeta por la Vida. This is how we show the importance of safety to us.

Finally, I would like to thank my co-workers (SIELME SpA), the CMPC Prevention team and maintenance managers for their support in applying the Tarjeta por la Vida, which is an important and effective tool to protect the health and safety of all of us who work at the Santa Fe Plant."

1.PROLOGUE

NCG 461 (6.1.i, 6.1.ii, 6.2.i, 6.2.ii, 6.2.iii, 6.2.iv, 6.2.v, 6.2.viii) SASB (RT-CP-250a.2a) GRI (2-6)

Responsible for managing forest and industrial assets, encompassing nursery production, plantations and harvesting, sustainable forest management, forest protection, and the manufacture and marketing of cellulose pulp and wood products.

The cellulose production area (Pulp) is the only one in which two suppliestal Mininco, individually account for

ers, Celulose Riograndense and For- 10% or more of the Company's total purchases\*.

\*Both companies are wholly owned subsidiaries of CMPC

# **Forestry Industry**

The forestry sector is key to the global economy, especially in regions where climate and soil conditions support rapid species growth. Countries in the southern hemisphere, such as Chile, Brazil, Argentina and Uruguay, have competitive advantages in industrial wood production due to moderate temperatures, adequate rainfall and soils that favor an accelerated and sustainable growth cycle of forest species. At CMPC, the production cycle begins in certified nurseries, where each plant is selected in keeping with sustainable standards. Through research and development, the Company optimizes genetic varieties to improve their adaptation and growth, promoting biodiversity and water regulation in balance with the native forest.

For example, in Chile, radiata pineone of the most widely used conifers in the timber industry-has a shorter growth cycle than species in the northern hemisphere. Pulpable logs are harvested between 16 and 18 years, while sawlogs require 24 years to obtain high quality fiber. In contrast, northern hemisphere conifers can take 18 to 45 years for pulpable use and up to 150 years to be sawn.

In Brazil, eucalyptus, the main cellulose fiber globally, grows at an even faster rate. Rotation times for wood for cellulose range from six to seven years, compared to similar species in the northern hemisphere, which require 25 to 40 years to reach maturity. This accelerated growth has made South America a global supplier.

This sector includes products such as structural wood and remanufactured wood in various formats, such as edgeglued moldings and panels, among others. Sawn lumber and its derivatives have shown a significant growth in international demand, especially in North and South American markets, as the only renewable material available on a large scale for construction.

9.VALUE CREATION

10.APPENDICES

# Wood **Industry**

The timber and panel industry stands out for its capacity to develop versatile and high value-added products used in various areas, such as construction, industry and packaging. Plywood panels are produced from wood veneers, and adhesive is applied to create strong and visually appealing panels.

In 2024, the Maderas business faced a downward trend the first semester but made a progressive recovery during the year. The supply chain was affected by the previous season's fires, and despite the slowdown in global construction, demand for products for this segment grew, driven by higher productivity and sustainability trends in wood solutions. In terms of marketing highlights, CMPC Maderas opened its direct sales operation in China and Japan.

# Cellulose **Industry**

The cellulose industry is vital to the production of numerous everyday products. Cellulose is obtained mainly from species such as eucalyptus for short fiber and radiata pine for long fiber.

The price of cellulose is volatile and depends on inventories, supply, demand and the global economic context, especially in developed markets. Supply and demand fluctuate in cycles that impact prices, also influenced by economic growth, production expansion, exchange rates and energy costs.

Beyond its cyclical behavior, the recyclability and emissions reduction trends in cleaning materials, personal care and packaging products anticipate a growing demand for cellulose on a global level.

In 2024, increased production reduced prices as demand grew slowly. However, tissue and personal care products continued to be the leading consumer products. The supply also faced unforeseen interruptions and operational problems. In addition, the industry must adapt to new regulations, such as the European Union Deforestation Regulation (EUDR), which will come into force at the end of 2025.

# Cellulose Industry Regulations

In addition to the applicable regulatory regime, CMPC is affiliated with the Forest Stewardship Council® (FSC) and the Programme for Endorsement of Forest Certification (PEFC)\* forest management certification systems and is subject to their standards and supervision.

NCG 461 (6.1.iii, 6.1.iv)

#### Regulatory Frameworks and Regulatory Oversight Entities

Country	Applicable Standards	Regulatory Agencies
Argentina	Forests are regulated by the Law on Minimum Standards for the Environmental Protection of Native Forests (Law No. 26,331), which establishes a mandatory authorization procedure for certain forestry activities, and by the Law on the Defense, Improvement and Expansion of Forests (Law No. 13,273). In addition, the prov- inces of Corrientes and Misiones have complementary regulations governing the environmental assessment processes for these activities.	Activities are regulated by the Ministry of the Environment and Sustainable Development (MAyDS), provincial authorities and entities.
Brazil	On a federal level, forestry in Brazil is regulated by the Brazilian Forestry Code (Law No. 12,651), which establishes the rules for production and incentives in the sector. In addition, the states of Santa Catarina, Paraná and Rio Grande do Sul have specific licens- ing regulations. Cellulose mills in Brazil are also subject to an Environmental License, pursuant to Appendix No. 1 of Resolution No. 237 of the National Environment Council.	Activities are regulated by the Brazilian Insti- tute of Environment and Renewable Natural Resources (IBAMA), the Chico Mendes Institute for Biodiversity Conservation (ICMBio), and the environmental secretariats of each state are the entities responsible for environmental regulation and supervision in Brazil, such as the Rio Grande do Sul Environment Secretariat (SEMA), together with the Rio Grande do Sul State Foundation for Environmental Protection (FEPAM), the Paraná Water and Land Institute (IAT) and the Santa Catarina Institute for the Environment (IMA).
Chile	<ul> <li>Forestry regulations are governed by the Forestry Law (Decree No. 4,636 of 1931), which regulates economic and industrial aspects of the sector, Decree Law No. 701 of 1974, which establishes rules for forestry activities and encourages forestation, and Law No. 20,283 on Native Forest Recovery and Forestry Development, aimed at guaranteeing forestry sustainability and the application of the national environmental policy. Law No. 21,600 creates the Biodiversity and Protected Areas Service and the National System of Protected Areas.</li> <li>Regulation of the cellulose industry is based on the Environmental Framework Law No. 19,300 and its regulations, Supreme Decree No. 40 of the Environmental Impact Assessment System. Within this framework, the cellulose, pulp and paper industries, as well as wood chipping plants, wood processing plants and industrial saw-mills are subject to mandatory environmental assessments.</li> </ul>	Regulation and oversight are the responsibility of the National Forestry Corporation (CON- AF), the Superintendence of the Environment (SMA), the Agriculture and Livestock Service (SAG) and the General Water Directorate (DGA). There are also regulations such as the Climate Change Framework Law No. 21,455 and the Escazú Agreement, in conjunction with management by the Biodiversity and Protected Areas Service.
United States	The cellulose industry is subject to federal, state and local environ- mental regulations. In addition, it complies with federal and state antitrust and trade regulations, as well as federal import and export regulations that affect its marketing in global markets.	Oversight of cellulose activities is provided by state governments and agencies, along with the Kentucky Energy & Environment Cabinet (KEEC), which regulates regulatory compliance in the region where CMPC is present.

Biopackaging markets packaging solutions using virgin and recycled fibers in 71 countries on five continents. Its business areas include Corrugados, Boxboard, Sack Kraft, and Edipac, through which it operates in the packaging, containers, and wrapping industry.

Both Sack Kraft and Edipac have two suppliers that account for 10% or more of their purchases. For Sack Kraft, these are Pulp and Iguacu Embalagens, and for Edipac, the suppliers are ing with QR codes for traceability and Sylvamo Exports and Boxboard\*.

# Packaging Industry

The packaging industry is important in the wrapping of various products. Due to its recyclability and lower environmental impact, cardboard stands out as a growing segment.

In terms of innovation, the packaging industry is adopting advanced technologies, such as the use of biodegradable materials, the design of smart packagthe integration of packaging systems that improve logistical efficiency.

The packaging industry has grown in recent years, driven by increasing local and international demand, especially in sectors such as food and beverages, pharmaceuticals and cosmetics. Its proximity to strategic markets such as the USA, Asia and Europe favors the trade and distribution of high quality packaging.

Sales and Distribution Channels					

The main sales and distribution channels for Boxboard and Sack Kraft are the company's own sales teams in the markets where the industrial plants operate. In export markets, these are industrial agents. For corrugated products, it focuses on direct sales to industrial customers, complemented by local distributors. For example, Edipac markets its products through wholesalers, retailers, distributors, printers, stationery stores, public market, food and delivery, pharmacies and department stores.

#### **Customers and suppliers**

Biopackaging has 4,547 customers across its business areas: Corrugados (755 customers), Sack Kraft (588), Edipac (2,746), and Boxboard (488). In Sack Kraft, two customers—Intercement and Pacasmayo—each account for 10% or more of total sales. The business also has 433 customers outside Chile and 14 international distributors. In Edipac, a single customer, Torre, concentrates 10% or more of sales, with 3 international customers and 3 international distributors. Neither Corrugados nor Boxboard have customers that account for 10% or more of sales. Corrugados has 41 international customers but no international distributors. In Boxboard, only CMPC Pulp S.A. accounts for more than 10% of its purchases as a supplier; the unit has 425 international customers and is supported by 62 international suppliers.

# **Biopackaging** Industry **Regulations**

NCG 461 (6.1.iii, 6.1.iv)

This activity is based on voluntary standards and chain of custody certifications for forest products granted by PEFC and FSC. Boxboard meets local legislation in destination markets, covering regulations affecting both the packaging sector and international trade.

The Corrugados business line operates under regulations that guarantee the safety and sustainability of its products and processes. Benchmark standards include BRCGS Packaging (FDA 21 CFR 176.170 and 21 CFR 176.180), which protects consumers throughout the supply chain; BFR XXXVI standard for packaging manufacturing; Eurasian Economic Commission Technical Regulation 005 2011 on packaging safety; Regulation (EC) 1935/2004 on materials in contact with foodstuffs; EU Regulation 2018/213 on the use of bisphenol a in varnishes and coatings; and ISO 50001.

THE BIO-FUTUR **30 INNOVATIONS FOR** 

## **Cherry Packaging Competition in China**

CMPC Biopackaging, in conjunction with Tongji University, the Shanghai International Institute of Design & Innovation and Copefrut, organized a competition for Chinese students and professionals to design new packaging for cherries. The initiative was sponsored by ProChile and took place in Shanghai, China.

The competition called for the development of packaging solutions using corrugated cardboard or paperboard. More than 100 applications were received from various universities. The projects were evaluated by a panel of judges made up of representatives from academic institutions and companies engaging with the sector.

The panel awarded six designs in two categories: corrugated cardboard and paperboard. The winning team presented a package that incorporates a board game into its design, integrating cultural and functional elements. As part of the award, a member of this team will travel to Chile to learn about the cherry production and packaging process.

The competition helped to promote collaboration between companies, academic institutions and designers for solutions adapted to consumer preferences in China. The results obtained will serve as reference for the design of new packaging for this market.

"The Daji Dali project started as a class project, but quickly became a passion. Inspired by our childhood memories, we combined cherry packaging with 5-in-1 games to create a fun and interactive experience. Thanks to the support of our mentor, Professor Yang, we learned to focus on user experience and sustainability. Winning first place was a great honor and has motivated us to **keep innovating**. We are deeply grateful to the organizers for this incredible opportunity and to everyone who has supported us on this journey."

Yifei Chen,

Daji Dali Project Leader, Communication University of China

## **Pulp-T Project: Circular Economy**

CMPC developed the Pulp-T project, which aims to transform a plant by-product into sustainable packaging material in partnership with Tresmontes Lucchetti. The Company worked with used tea leaves as an innovative alternative to traditional cellulose fibers, reducing the dependence on newspaper in its production process.

The result was the design of an egg carton made from recycled cardboard pulp and fiber from used tea leaves. It applied design thinking methodology for its development, ensuring product optimization through industrial testing and assessment of its performance.

CMPC is currently finalizing the procedures for the first industrial production of the product and intends to fully integrate it into its production line.

"I am very happy with the results achieved thanks to the effort and dedication of the whole team. We worked together to submit this product to the Packaging Innovation Awards, where we won second place. Motivated by this success, we decided to participate in Viva Chile Packaging, where we won first place in the sustainability category. Bringing these awards to Moldeados fills us with pride and reinforces our commitment to continue innovating and developing high-impact solutions."

Softys manufactures and markets hygiene and personal care products made from virgin and recycled cellulose fibers. With a presence in more than 20 markets, it serves approximately 500 million consumers who can choose from among its thirteen regional brands and more than 20 local brands.

Softys is the leader in Latin America in tissue products and ranks second in the diaper category, offering solutions that accompany people every day at every stage of their lives. It covers the tissue and personal care products industry with its three segments: Consumer Tissue, Personal Care and Professional.

In a highly competitive context, driven by investment in new technologies and a constant quest for innovation, this business line requires a differentiation in products and commercial strategies to maintain leadership. In addition, exchange rate volatility represents a challenge, affecting costs and margins in the different segments.

Softys works with eight major suppliers that concentrate 10% or more of purchases. CMPC Pulp, UPM and Suzano are notable suppliers in the Consumer Tissue and Softys Professional segments, while BASF and FITESA are important suppliers in the Personal Care segment.

To continuously improve the implementation of processes for the preparation and dissemination of information to the market, the Investor Relations and Corporate Affairs and Sustainability departments participate in comparative studies on the reportability of CMPC and international companies in the cellulose, packaging and personal care industries. This exercise enables the Company to adopt practices and maintain an ongoing improvement process for disclosures to the market and its stakeholders. The Company also undertakes communication campaigns and publishes reports and news, directed to each group as appropriate.

2.PROFILE

# Investor **Relations**

The Investor Relations Department is responsible for keeping investors informed about the Company's status, covering both its corporate strategy and its financial and operating performance.

Meetings Held with Investors, by Region (%)

Its work is aimed at building long-term, trust-based relationships through the transparent and constant provision of relevant information.

> As part of its functions, this department prepares and publishes quarterly data for investors, including financial statements, impacts on each business area and ESG performance. All this information is available in the Investor Relations section of the corporate website.

> Investors and analysts can contact the area from different channels, such as the web contact form, grievance hotline, social networks, website and specific contacts in the area.

In addition, the department develops ways to strengthen communication, such as visits to production plants, quarterly results presentations, in-person and/or virtual meetings, local and international investor conferences, and annual meetings and promotional tours.

In 2024, the Investor Relations area participated in four national and international conferences, meeting with more than 40 investors.

At these conferences, in addition to presenting the Company's status and explaining the results, it also discussed good disclosure practices and corporate governance, as well as the corporate sustainability strategy.

Region	2020	2021	2022	2023	2024
Asia	2%	1%	3%	4%	2%
Europe	8%	5%	15%	4%	8%

### CMPC follows a General Purchasing Policy and an Operating Procedure for selecting suppliers and contractors. These documents establish criteria and definitions for supplier identification and classification:

3.GOVERNANCE

### Strategic Supplier

### Local Supplier

These suppliers provide goods and/or services that have an impact on CMPC's performance, either due to the amount traded or the complexity of the equipment or processes involved.

These suppliers maintain a strong connection with the local community through their origins, ownership, and initiatives that positively impact employment and sustainable development.

### MSME Supplier\*

Each country where CMPC operates has its own definitions of micro, small and medium-sized enterprise suppliers, based on local regulations.

### Number of Suppliers per Category

GRI (204-1)

Categories	2020	2021	2022	2023	2024
Local suppliers	-	1,758	1,960	1,835	3,770
MSME suppliers	7,563	6,826	6,692	6,312	5,765
Strategic suppliers	-	-	538	533	346
Global suppliers	1,058	1,069	1,266	1,782	1,570
Domestic suppliers	23,275	21,645	25,694	26,194	21,120
Percentage of local suppliers	-	9%	12%	18%	29%
Total number of suppliers	24,233	22,534	26,756	27,734	22,460

Source: Supplier Engagement Department.

Note 1: The sum of domestic and global suppliers does not equal the total number of suppliers, since some suppliers provide services to more than one business. Note 2: Domestic suppliers are those working in the same country of origin as the corresponding CMPC subsidiary.

Note 3: If a supplier is considered strategic and works for more than one subsidiary, for the purposes of the total, this supplier has been associated with the subsidiary to which it issues the most invoices.

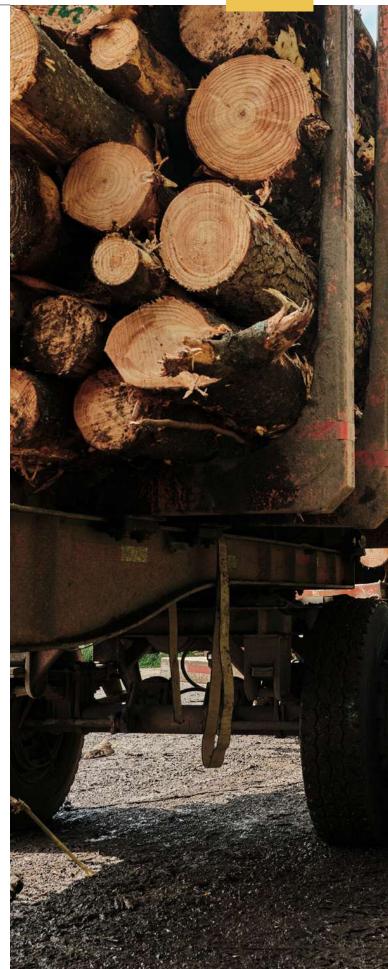

Note 4: In 2024, Softys defined local suppliers as those with operational offices in the same district, municipality or department as its facilities. It is in the process of developing this concept to implement a comprehensive development program

Note 5: Softys Brazil's SME supplier data are not reported, as the company is still assessing the most appropriate methodology for their collection

```

1.PROLOGUE

NCG 461 (7.2) GRI (308-1, 308-2)

CMPC uses a general assessment to measure the environmental, economic and social performance of its suppliers. This methodology is applied both remotely and in the field and covers different types of risk exposure that are specific to each country, sector and product.

The general assessment covers 100% of suppliers that provided any type of service to the Pulp and Maderas subsidiaries, ensuring compliance with quality, delivery terms, risk management and other contractual obligations. Risks considered in this assessment include:

- Financial solvency
- Customer diversification
- Occupational safety indicators and accident rates
- Compliance with legal and labor regulations
- Relevant certifications
- Conflicts of interests

 International crimes such as human trafficking or terrorism

 Environmental aspects, such as procedures for respecting and protecting the environment, preventing environmental damage, environmental compliance, waste management, energy performance.

The company determines supplier eligibility through a verification that includes financial analysis, tax regularity, mandatory records and technical assessment. CMPC helps companies to implement corrective actions and improvements to address the gaps identified through supplier assessments.

# **Strategic** Supplier Assessment

The Company also has an ESG (environmental, social and governance) audit for its strategic suppliers. It applies a questionnaire based on international indices, initiatives and standards such as the following: Dow Jones Sustainability Index (DJSI), Carbon Disclosure Project (CDP), United Nations Global Compact Principles, International Labour Organization standards and Global Reporting Initiative (GRI) standards. This tool, developed by an external consultant in conjunction with the Sustainability Department and Supplier Engagement Department, looks at criteria such as human rights, labor and environmental practices, ethics and responsibility in the supply chain.

The above provides an ESG assessment, which is complemented with documentation demonstrating the supplier's sustainability performance, as well as planned visits to supplier facilities that do not comply with the established standards.

Feedback sessions are held with large companies, whose approach to sustainability is complementary to that of CMPC, and with local companies, which are supported in their progress in these matters.

These processes help identify opportunities for improvement, establish action plans to address possible deficiencies and foster ongoing improvement on sustainability matters. The plans include measures to align supplier performance with the standards required by the Company.

Source: Supplier Engagement Department.

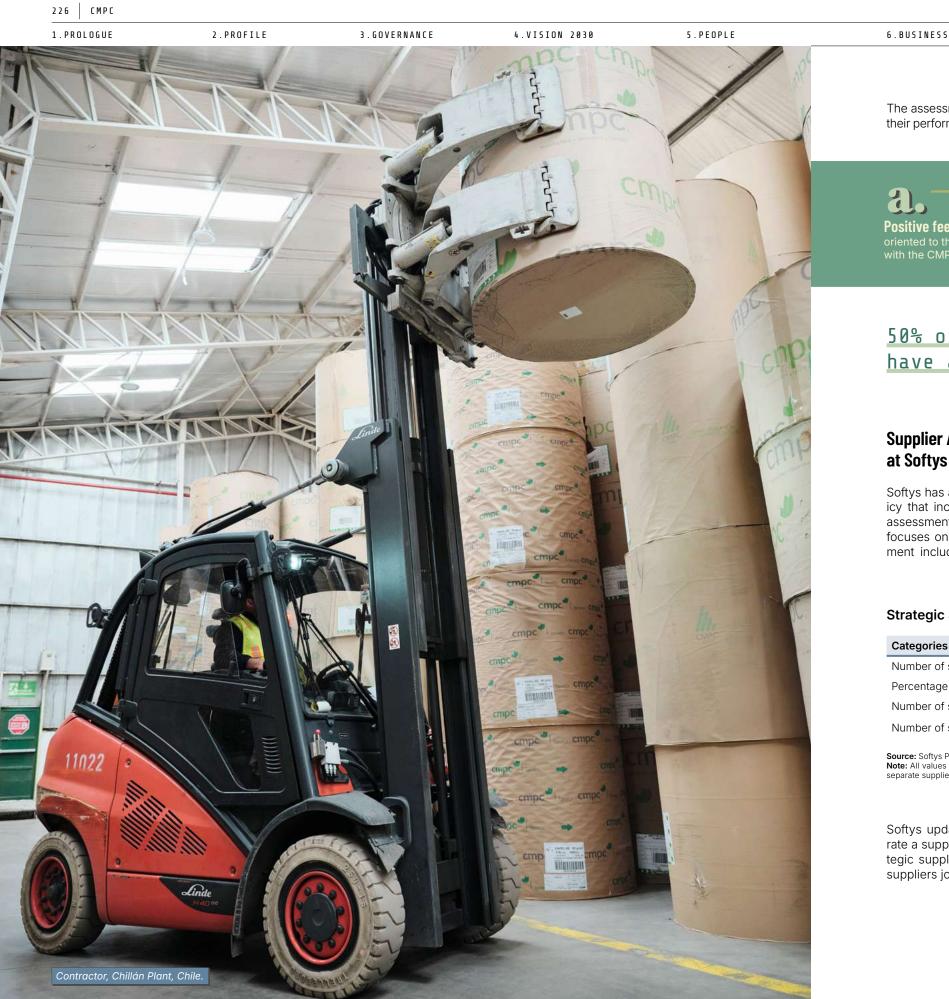

(\*) Suppliers assessed using sustainability criteria are those included in the SES (Service Entry Sheet) and that provide services to the Pulp and Maderas areas. The reduction in assessments between 2022 and 2023 is due to the difference in the number of Service Entry Sheets (SES) issued, which were 61,803 and 54,563, respectively. (\*\*\*) As of 2024, a new category called "strategic suppliers" is added. (\*\*\*\*) The significant increase in global suppliers assessed for sustainability in 2023 is due, in part, to the implementation of ESG auditing for strategic suppliers, a process that did not exist in previous periods

### ESG Evaluation of Strategic Suppliers at CMPC

As part of its Sustainability Strategy 2030, CMPC asked Sodexo to participate in the Strategic Supplier ESG Assessment, developed by a local consulting firm. The audit aimed to evaluate Sodexo's sustainable performance in the three ESG dimensions.

The evaluation allowed to analyze the company's practices in key areas. In the environmental dimension, energy efficiency, waste management, emissions and sustainability of operations were reviewed. In the social dimension, labor relations, diversity, inclusion, workplace safety and social responsibility initiatives were evaluated. Finally, the governance dimension addressed leadership structure, transparency, risk management and regulatory compliance.

The audit process was led by Jorge Silva, Sodexo's Operations Manager, who coordinated different areas to answer the questionnaire and gather information from Sodexo's Sustainability area. The company already had a dashboard of ESG indicators, monitored monthly by its Sustainability Steering Committee, which facilitated the delivery of data and allowed evaluating its performance in each dimension.

Sodexo has developed initiatives together with CMPC, such as the Circular Casino Project in the Pacifico Plant, which manages food waste using a technology that turns it into compost. This compost is delivered to a technical high school, where it is used in lettuce crops that are later acquired by the casino for consumption.

"For Sodexo, sustainability is one of the three pillars of our company's strategy and it is at the core of our daily work. In this context, participating in this evaluation process that CMPC invited us to, was undoubtedly very valuable to review our management, to have complete clarity of the value that we can deliver as a service company to our clients as a strategic partner, and, at the same time, to continue strengthening the ESG performance measurement in different areas in the places where we deliver our services. Together with CMPC, we have a common goal and our teams are permanently working to ensure that our actions have a positive impact".

### CMPC Support Program: Improving Access to Working Capital

Since 2022, CMPC has implemented the CMPC Support Program, a marketplace operated by Monkey Exchange, designed to enable suppliers to request advance payment of their invoices quickly and easily at lower costs than traditional factoring. This program, which began in Guaíba (Brazil), has been adopted by the Company's suppliers.

The program provides access to quick working capital, especially for MSMEs, offering benefits such as competitive rates without affecting credit limits with financial institutions, immediate availability of the advance payment, no operating costs and no minimum transaction requirement.

In 2024, USD 40 million in advance payments were made, a 370% growth over the previous year, benefiting over 100 suppliers with savings of up to 50% in the cost of financing compared to the traditional market. "The partnership with CMPC Monkey has enabled us to reduce factoring costs and turnaround times at a favorable rate. In addition, **the platform is easy to access and operate, making it easy to work quickly and independently.**"

> **Cristina Olea,** Talleres Lucas S.A

"Thanks to the partnership with CMPC Monkey, we have been able to reduce factoring costs. The operating tool has optimized operational response times, and its **financial demand model has given us access to favorable rates with CMPC.**"

> **Michelle,** Supplier, Zenta Group

5.PEOPLE

# **Ethics and** Compliance

The Compliance Strategy aligns with which is based on the following three the 2030 Strategy pillars and is implemented through the Integrity Program,

key aspects:

Facilitate: Decision-making through simple, accessible and adaptable standards and practices.

Mobilize: Ethical leadership that fosters an environment of trust, transparency and accountability.

**Operationalize:** Company values, effectively integrating them into its standards and processes.

# In 2024, the Compliance Strategy was revised to steer the Integrity Program towards promoting Company values, contributing to the Company's cultural evolution.

### Governance

Ethics and compliance governance is structured around the following levels:

### Progress in 2024 GRI (205-1; 205-3)

In 2024, as a result of the enactment of the new Law on Economic Crimes and Environmental Violations, the Company there were zero cases of corruption inupdated its Crime Prevention Model. This involved multidisciplinary teams, led by the Corporate General Counsel

(Legal, Compliance and Risks) and integrated by leaders and heads of areas and processes. As part of the same initiative, in-person and remote workshops were held for CMPC executives and employees, focusing on the most exposed positions and risk areas. The purpose of these trainings was to provide tools for the identification, assessment, prevention and mitigation of risks associated with these regulations.

Additionally, the Company updated its risk assessment for corruption and anti-competitive behavior in Brazil, focusing on Sack Kraft, and made progress at Guaíba. In 2025, the Company will continue updating the remaining subsidiaries outside of Chile.

It is worth mentioning that, in 2024, cidents in which disciplinary measures were applied or employees were dismissed.

### Ethics and **Compliance Training** GRI (205-2)

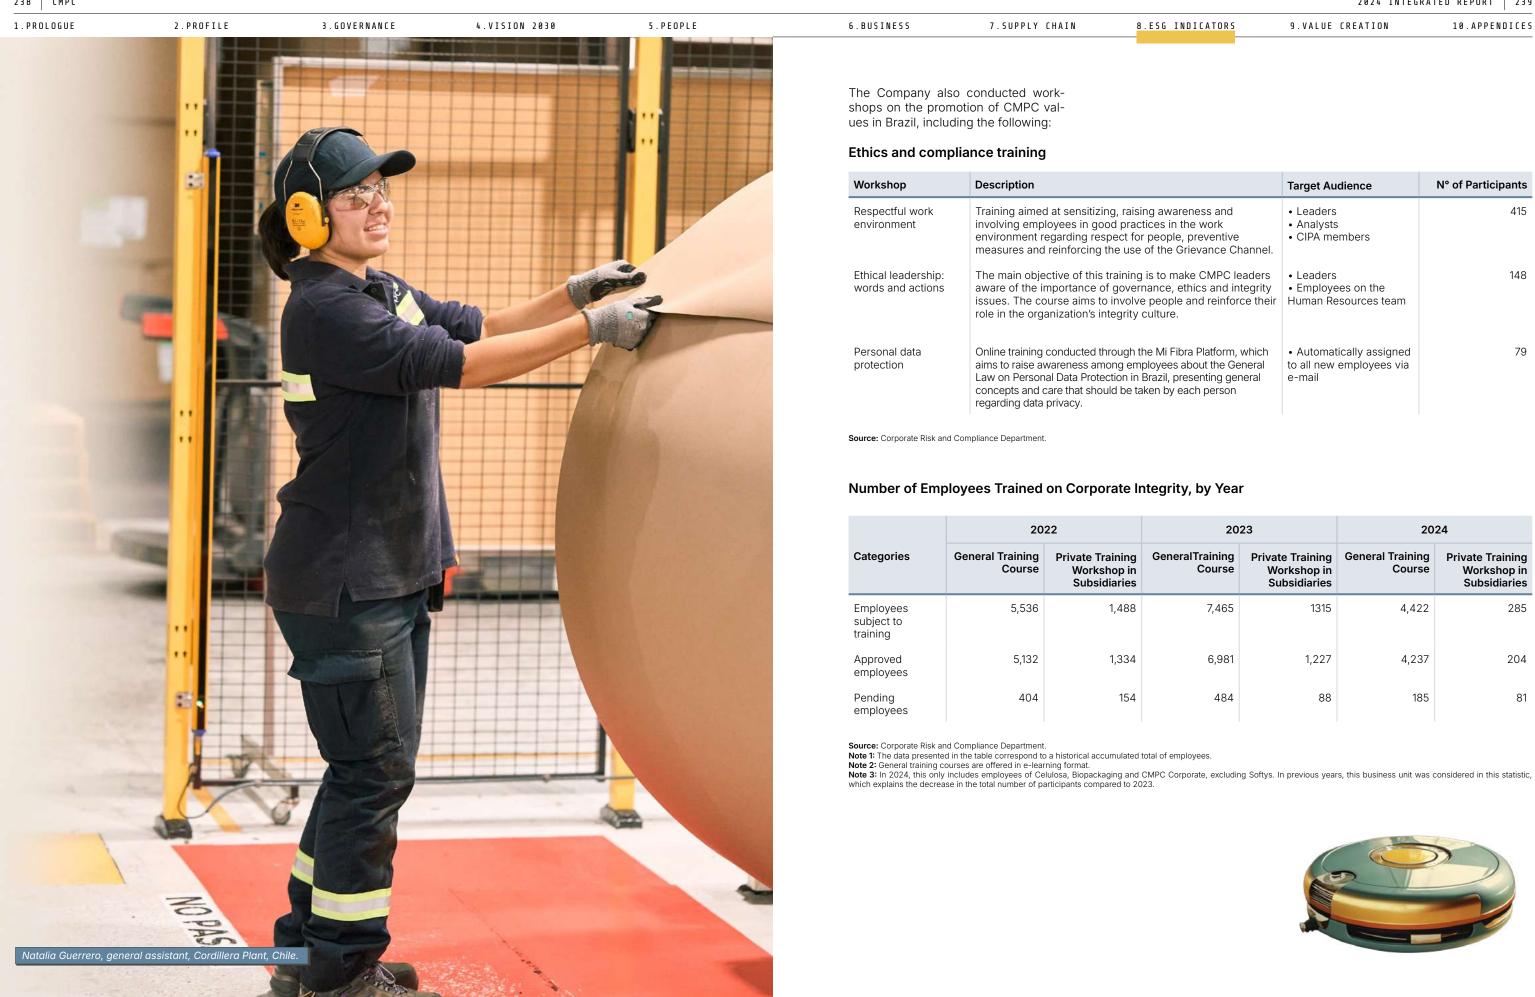

The Company has employee training plans focused on its policies, internal standards and current regulations. These courses are conducted through in-person and virtual sessions, as well as through the use of digital tools such as e-learning capsules, which include knowledge tests and supplementary material.

In 2024, the Company updated general and specific training plans, highlighting the launching of a practical training capsule to reinforce guidelines and good conduct on free competition.

The event was attended by world leaders in sustainability and integrity and aimed to provide tools, networks, knowledge and inspiration to expand the impact of private sector contributions to the 2030 Agenda and the SDGs.

# Legal and Regulatory Compliance

CMPC is governed by corporate policies, procedures and standards that detail workflows, operational tasks and control activities to prevent regulatory non-compliance in the countries where it operates. These are focused on its main stakeholders.

### a. Customer Compliance NCG 461 (8.1)

GRI (2-27, 418-1)

The Company has procedures that are specific to each location for each business, aligned with corporate standards and practices, to ensure compliance with applicable regulations in each country. In its customer and consumer relations, it follows the Integrity Program guidelines and the values set forth in its Code of Ethics.

### **Risks Associated** with Consumers

CMPC has identified a potential risk to its operations as quality issues in products marketed directly to customers that could have an impact on consumer health and safety.

### How is this risk managed? GRI (416-1)

To avoid this threat, CMPC addresses production processes with standardized management and a preventive approach that considers control systems at each operational stage, mainly highlighting the following:

• Raw materials must meet critical

### \*CMPC Pulp FSC-007488, CMPC Maderas FSC-C110313

Regulations.

### b. Employee Compliance

NCG 461 (8.2) GRI (2-27, 408-1, 409-1)

To prevent and detect possible regulatory non-compliance related to worker rights, CMPC implements a regulatory framework, which includes the following:

Code of Ethics.

• Internal Regulations on Order, Hygiene and Safety, applicable to its subsidiaries in Chile.

 Grievance Hotline for reporting irregularities

• Human Rights Policy, which guarantees dignified working conditions.

· Diversity and Inclusion Policy focused on equity.

• Integrity (Anti-Corruption) Policy and Crime Prevention Model, to reinforce regulatory compliance.

Occupational Health and Safety Policy.

Through its cross-functional areas, the Company carries out activities to address topics such as diversity, inclusion, prevention of harassment and discrimination. These measures aim to prevent and mitigate risks and promote a respectful and safe work environment.

CMPC is committed to comply with current labor legislation. In Chile, Labor Code compliance emphasizes respect for people and non-discrimination, ensuring fair and equitable labor relations ronment, the surrounding communities for its employees.

CMPC does not operate in risk conditions related to child labor or exposure of young people to hazardous work. The Company was involved in two employment protection cases in its subsidiary Softys Colombia, which were both dropped.

### c. Environmental Compliance NCG 461 (8.3)

GRI (2-27)

CMPC has an Environmental Policy. This policy is managed by the Environmental, Occupational Health and Safety Department, which includes the Waste, Emissions and Obligations Division. This division is responsible for planning, implementing and supervising environmental and territorial management guidelines to ensure regulatory compliance at all locations where it operates.

It also has the Cross-Functional Standard for Operational Incidents with Environmental Consequences, applicable to the Celulosa and Biopackaging plants. This standard classifies incidents according to their severity. considering their magnitude and impact, to identify, assess, control and record events that may affect the envi-

d. Industry and Free **Competition Compliance** NCG 461 (3.1.iii. 8.4)

### GRI (2-27, 206-1)

The Company has a Free Competition Compliance Program, which defines guidelines and concepts through the Free Competition Policy. This program is complemented by a practical manual for internal use that establishes rules and guidelines for dealing with risk situations. These standards are disseminated and reinforced through periodic

communication and training activities

During the year, no cases related to unfair competition, monopolistic practices or anti-competitive misconduct were reported in any of the markets or countries with industrial operations.

10.APPENDICES

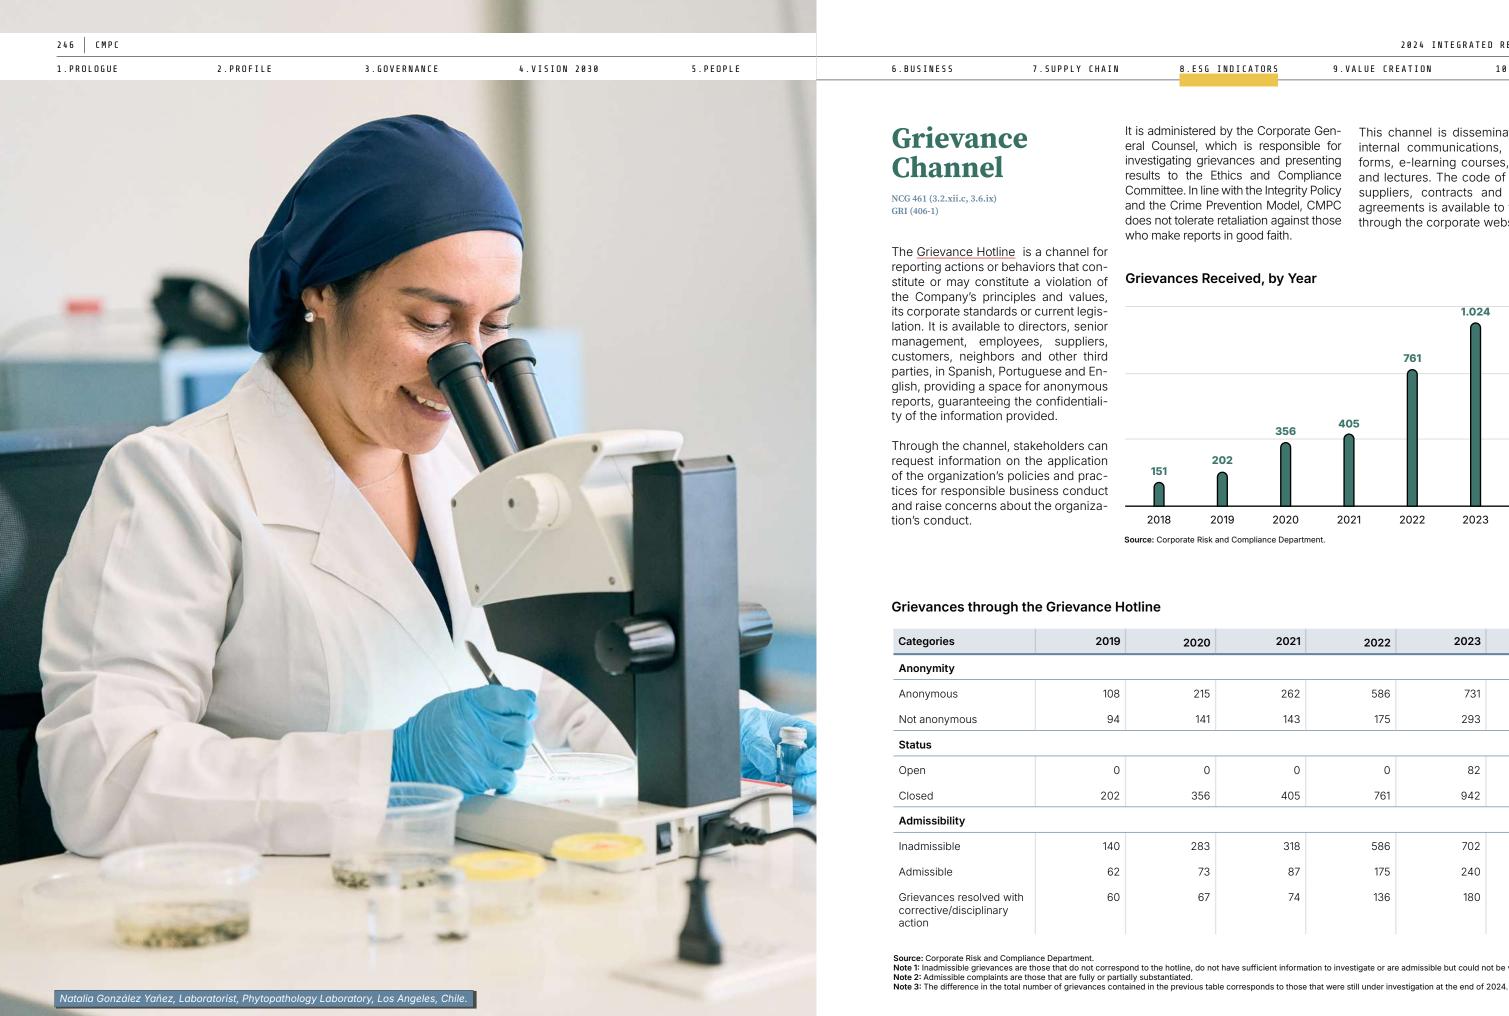

targeting employees in exposed positions and risk areas.

The program reflects CMPC's commitment to transparency and fair competition, aligning itself with the guidelines of the National Economic Prosecutor's Office (FNE) and the provisions of Decree Law No. 211, which regulates the defense of free competition in the country, as well as with best international practices and standards in this area.

Periodic risk assessments and internal controls improvements are also carried out, including the review of business

processes, related policies, information safeguards and activities in trade associations. The Corporate Risk and Compliance Department, supported by external experts, performs periodic analyses to identify and mitigate risks associated with anti-competitive behavior, applying preventive, detection and response actions. In addition, the Internal Audit area includes the review of processes with higher exposure or risk in its annual plans.

# Nature, **Conservation** and Biodiversity Strategy (NC&B)

2030 Target

GRI (101-1; 101-2) FSG (5)

The Nature, Conservation and Biodiversity Strategy (NC&B) strengthens the conservation and recovery of biodiversity in CMPC assets and beyond. It also aims to minimize operational impacts on ecosystems, preventing their degradation and promoting their ecosystemic functions.

### NC&B Strategy

### **Biodiversity**

CMPC protects ecosystems, managing species diversity and preventing environmental risks such as fires and pests.

It prioritizes ecosystem benefits in seven categories: water regulation, carbon sequestration, pollination, soil formation, habitat conservation, among others.

### **Territoriality**

It integrates a broad vision of the landscape, considering environmental and social impacts to optimize the conservation and connectivity of ecosystems.

Nature', Business for Nature's campaign to stop biodiversity loss by 2030. The Company incorporates the main environmental frameworks and regulations, including the EU Corporate Sus-

This strategy aligns with 'It's Now for tainability Reporting Directive (CSRD), the Taskforce on Nature-related Financial Disclosures (TNFD), the Science-based Targets Network (SBTN) guidance, the NA100 guidelines and the WBCSD Roadmaps to Nature Positive.

### SG INDICATORS

9.VALUE CREATION

# Add 100,000 hectares in conservation, restoration and/or protection by 2030.

Its objectives are to 1) value conservation and protection areas, 2) identify and highlight their importance for the sustainability of forestry operations, and 3) demonstrate the virtuous relationship between productive activities and conservation areas. This is structured around the following four pillars:

### **Ecosystem Services**

### **Nature-Based Solutions**

It implements strategies that take advantage of ecosystems to address environmental and social challenges, contributing to climate change mitigation and restoration.

In addition, the strategy's commitments are aligned with the Kunming-Montreal Global Biodiversity Framework.

### Forest Traceability: Ensuring Compliance with EUDR Regulation

To comply with the European Union Deforestation Regulation (EUDR), CMPC developed the Wood Traceability Platform (WTP), a tool to identify the origin of wood used in cellulose exported to Europe. The platform provides evidence that CMPC does not deforest and complies with environmental, labor and human rights regulations in Chile and Brazil.

Its implementation integrated different areas of the Company into a single traceability system. In meetings with European customers, CMPC presented its progress, receiving positive feedback on its ability to comply with the EUDR, as the tool guarantees the traceability of raw materials to their destination in Europe. "One of the biggest achievements of this initiative has been the response from customers. In meetings with buyers in Europe, they confirmed that they feel **safe working with CMPC**, because the traceability of our products is guaranteed. In addition, this project provided **cross-functional collaboration between different areas of the Company**, which has been key to its implementation. Today we are prepared to comply with regulations and ensure the traceability of our products with every sale."

> **Clara Moraga,** CMPC Customer Service Director

### CMPC at COP16 on Biodiversity

In October, the Conference of the Parties (COP) on Biodiversity took place in Cali, Colombia. This conference focused on biological conservation, the sustainable use of its components and the equitable sharing of ecosystem benefits.

During the event, CMPC presented the **Patagonia Project** as part of its NC&B Strategy.

This project will transform more than 26,000 hectares in the Aysén region of Chile into areas dedicated to conservation, restoration and carbon sequestration. It includes the conversion of 4,500 hectares of plantations to native forest, the conservation of 13,280 hectares of flora and fauna, and the use of 8,100 hectares as carbon sinks.

The project also stands out for the opening of El Condor Park, located near Coyhaique, It also led to the creation of the Patagonia CMPC Fund, designed to finance conservation, innovation and sustainability projects in Aysén.

In 2025, the Patagonia Project will be further developed as a conservation, restoration and carbon sink initiative, protecting nearly 26,000 hectares in Aysén to ecosystem protection.

9.VALUE CREATION

10.APPENDICES

"The Natural Capital analysis we are undertaking will make it possible to **determine risks and opportunities for the Ecosystem Services defined in the different properties of the Patagonia Project**. This will enable us to draw up a roadmap and move forward both internally and in the development of initiatives on a territorial scale, in collaboration with local public and private stakeholders."

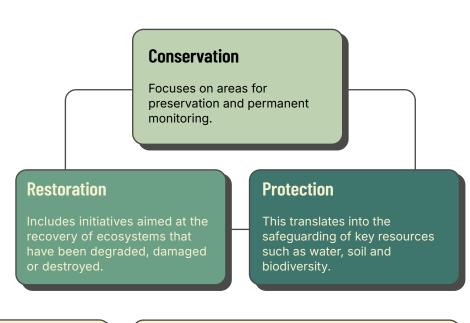

> **Luis Patricio Herranz Hewitt,** Head of Sustainability and Conservation

### **Biodiversity Impact** Management

### GRI (101-2; 101-4; 101-5)

The Company manages its impacts on biodiversity through a methodology that weighs probability, scope, temporality, vulnerability and magnitude, which makes it possible to mitigate impacts with a significant or high magnitude Environmental Impact Relative Importance Factor (FIRIA). All sites with impacts have a management plan regulated by the Forest Management System, which establishes instructions and procedures for operating without affecting biodiversity.

The main measures implemented include:

• Prevention and mitigation: Preventing forest fires through silviculture, elimination of invasive exotic species, protection of critical habitats

degraded areas.

• Control of invasive species: Plans for managing wild boar and axis deer without affecting native fauna.

 Responsible use of consumables: Restriction in the use of pesticides and harvest management to avoid alterations to wildlife.

and Alliance for Zero Extinction (AZE) sites, and minimization of shading on rocky outcrops and wetlands.

• Conservation and restoration: Implementation of ecological corridors, protection of High Conservation Value Areas (HCVA) and restoration of

• Responsible management: Sustainable grazing practices, crop adaptation to minimize interference with key species, and prohibition of extraction in protected areas.

• Training and awareness: Training of employees on good forestry practices and dissemination of information on biodiversity in forest resources.

SASB (RR-FM-160a.4)

Ecosystem services are the benefits that humans obtain from ecosys-

se include sourcing, regulation of ecosystem processes, cultural and support services, which underpin the functioning of the others.

tems by interacting with them. The- CMPC has conservation and protection areas that provide various ecosystem services, which are prioritized and grouped into the following seven categories under the NC&B Strategy:

### Ecosystem Services by Type, Contribution and Importance

Ecosystem Service	Туре	Contribution	Importance for CMPC
Tourism, recreational activities and physical and mental health	Culture	Social	Engagement with neighboring communities through access to protection and conservation areas. These initiatives include the assessment of potential impacts according to each area and their ability to provide benefits.
Food and medicinal resources	Sourcing	Social	Sustainable use and extraction of non-timber forest resources in native forests and plantations, also promoting the use of High Conservation Value Areas (HCVA) with a socio-cultural approach.
Freshwater and water flow regulation	Sourcing and regulation	Social and environmental	Conservation and restoration of riparian ecosystems, ensuring the quality and quantity of water available for neighboring communities. It includes mitigating the risk of water scarcity by preserving watersheds and plant cover that sustains the water cycle.
Carbon sequestration and storage	Regulation	Environmental	Assessment and management of the Company's plantations and native forest to increase carbon storage and growth to contribute to climate change mitigation.
Pollinization and biological pest control	Regulation	Environmental	Conservation and restoration of floral species with specific symbiotic interactions with pollinators, identification of native species for biological pest control, promotion of conservation strategies, control of invasive exotic species and minimization of the impacts of forestry operations on pollinators.
Formation and conservation of soil fertility, nutrient cycling and prevention of erosion	Regulation and sustainability	Environmental	Maintenance and expansion of plant cover, conservation of the leaf litter layer, restoration of degraded soils, and post-fire rehabilitation. It includes the revision of gully treatment to preserve the soil as an essential base of forest ecosystems.
Habitat for species and conservation of genetic diversity	Sustainability	Environmental	Conservation of species and their genetic diversity both in situ, in conservation areas, and ex situ, through nurseries and germplasm banks. It also protects critical species habitats, including umbrella and emblematic species, ensuring their preservation for regional biodiversity.

Non-timber ecosystem services play a fundamental role in the Company's relationship with neighboring communities. Below are some of the main contributions:

• Cultural value: Facilitate access of Mapuche communities to cultural sites. • Mental and physical health: Convert land into parks with free public access for children and senior citizens for recreation, sports and environmental education.

• Collection of non-timber forest gent fires and damage from logging products (NTFP): Provide access to and timber theft. areas where collectors obtain products for sale or use.

• Fresh water and water regulation: Implement joint management plans with communities to guarantee water supply for external uses.

In the long term, these initiatives contribute to reducing the risks associated with intentional and negli-

### **High Conservation** Value Areas (HCVAs)

The NC&B Strategy considers preserving and restoring protected areas and unique ecosystems. The identification and protection of these areas are aligned with sustainable forest management certifications, focused on three types of HCVAs. These are classified as **biological**, intended to preserve vulnerable flora and fauna; services, which include conservation actions; and manage-

natural areas that provide essential services and serve the needs of local communities; and **sociocultural**, which involve areas that are important to cultural identity.

### HCVA in Numbers and Surface Area (Number and Hectares)

Categories 2020		20	20	21	2022		2023		2024	
	Number	Surface Area (Ha)								
Biological	26	24,482	30	24,711	33	24,785	34	24,963	37	28,773
Services	382	3,622	408	3,034	408	3,079	405	3,025	405	3,474

Source: Sustainability Department - Conservation Area.

HCVA management involves a threestage process: identification, which involves gathering information in consultation with local communities and academic institutions; monitoring, which involves an ongoing assessment of status and definition of

ment. which involves implementing measures to mitigate or eliminate threats to the area, guaranteeing its protection.

Additionally, in Argentina and Brazil, there are other areas with endangered species. Although they do not meet the criteria to be declared HCVA, they are managed with the same precautionary measures, with monitoring approximately every four years.

### **Endangered Species**

GRI (304-4)

Several at-risk flora and fauna species<sup>24</sup> coexist in and near the forests, and these must be monitored to ensure their conservation and protection. The NC&B Strategy prioritizes the protection of rare, threatened and endangered species, ecosystem conservation, vegetation and ecosystem restoration, riparian, wacorridor management.

In 2024, the Company identified properties adjacent to or near biodiversity protection areas, in accordance with international agreements and in line with the recommendations of the Taskforce on Nature-related Financial Disclosures (TNFD). This analysis showed cisions to strengthen the conservathat in Argentina, Brazil and Chile, tion of these areas. forest resources are adjacent to

ter and soil protection, and wildlife critical habitats, where endangered species are present.

> In 2025, the Company will move forward with the second stage of the process, in alignment with the TNFD, focusing on the assessment of biodiversity impacts and dependencies within forest management. This analysis will help to define de-

# In the **Line of Fire**

### CMPC (2)

The magnitude of damage caused annually by rural fires, both for the Company and neighboring communities, requires ongoing efforts to strengthen plans, procedures and strategies for fire prevention, fighting and mitigation, prioritizing the protection of life, homes and care for the environment. During the 2023-2024 season, there were 774 fires and 553 hectares affected.

### Fire Protection

Fire management includes firebreaks and plant management to reduce risks. The Company uses predictive models incorporating advanced technology to anticipate possible emergencies and identify risk factors.

In Los Angeles, Biobío Region, Chile, the Company operates a Fire Operations Center, a strategic center that coordinates fire prevention and firefighting actions. The center detects rural fires, analyzes climatological and topographical variables and allocates resources for emergencies.

This center works in constant coordination with other companies in the forestry sector through the Chilean Timber Corporation (Corma) and the CONAF operations center, monitoring fires nationwide.

### **Community Prevention** Network (Red de Prevención Comunitaria, RPC)

Created after the 2017 mega fires in Chile to foster a preventive and collaborative education and culture in relation to rural fires in the communities near Company operations. Operating from the O'Higgins to Los Ríos regions and present in 26 districts, as of 2024 the initiative has trained more than 9,000 people in rural fire prevention.

During the same year, the RPC formed 494 committees, an increase of 9% over the previous season. These committees consist of approximately 6,000 members trained in environmental risk management. This pioneering model in Chile involves municipalities, companies, public agencies, social organizations and neighborhood associations, strengthening community prevention and improving the emergency response capacity.

### Intersectoral Patrols and Active Prevention

CMPC, CORMA, CONAF, armed forces, firefighters and local stakeholders consolidate their efforts through a public-private synergy for fire prevention in high-risk areas. The RPC participates actively in risk surveillance and communication, complementing the actions of professional brigades. During critical conditions, such as yellow or red alerts, the Company engages in intersectoral preventive patrols with municipal teams, police, firefighters and other forestry companies.

In the event of a fire, this intersectional coordination provides an early response through an initial firefighting effort to safely and effectively contain the fire and protect homes. These resources, made up mostly of local inhabitants, include 92 multipurpose brigades, 98 motorized scouts, 135 scouts on foot and 12 scouts on horseback.

### Firefighting 2024

Country	Argentina	Chile	Brazil
Management	The Company made critical resources avail-able.	The Company prioritized fire analysis to identify improve-ments in control processes. It added two ground brigades, operational leaf blowers and tractors with water tanks.	The Company implemented prevention programs in industrial neighborhoods, greater automation of work sites and high-capacity aircraft for coordinating firefighting efforts. It also improved early detection and logistics systems for wa-ter sources.

### CHAIN

# Climate Change

FSG (13); FSG (14) TCFD (objetivos y métricas)

Under the Race to Zero campaign of the United Nations Framework Convention on Climate Change (UNFCCC)<sup>25</sup> in 2021 CMPC made a commitment to achieve net zero emissions by 2050. As part of the review of its 2022 strategy, the Company decided to move up this target to 2040, supported by carbon capture from its plantations and forests. To this end, it established the following intermediate science-based climate targets validated by the SBTi<sup>26</sup> : reduce Scope 1 and 2 emissions by 50% by 2030 and reduce Scope 3 emissions by 37.5% by 2035.

The Company has two policies, one on the Environment and the other on Climate Change, which form part of its regulatory framework. Since 2024, it has a climate transition plan based on seven strategic pillars that guide its actions towards these targets.

In 2025, this transition plan will move forward with the identification of risks and opportunities related to climate change in the value chain, with a focus on mitigating impacts. It will include scenario analyses and financial assessments to determine the investments and technologies to be incorporated into the value chain to achieve the environmental targets established.

### **Transition Plan**

SASB (RR-FM-450a.1)

To manage challenges associated with climate change in 2024, the Company implemented a climate transition plan, designed in alignment with standards such as the Task Force on Climate-related Financial Disclosures (TCFD) and the International Sustainability Standards Board (ISSB).

# Pillars of the Climate Transition Plan

3.GOVERNANCE

**1. Definition of a clear ambition:** The target is to lead sustainability and climate action to achieve net zero emissions by 2040, in conjunction with senior management and the Board of Directors.

**2. Robust GHG emissions inventory:** Through the GHG Protocol, the Company prepares a detailed inventory to diagnose the management of Scope 1, 2 and 3 emissions and to identify the most relevant sources. This makes it easier to prioritize initiatives and maximizes the impact of reduction actions.

**3. Setting targets:** The Company defines credible, transparent and science-based targets, with short-term emission reduction targets validated by SBTi and a commitment to reach the Net Zero target by 2040.

**4. Governance integrated into business strategy:** The Net Zero 2030 strategic initiative, led by the Sustainability Department, has a Net Zero Committee, which is responsible for defining the path towards decarbonization through strategic and operational decisions. In 2024, it was accompanied by the Net Zero Cell, which involved the Pulp, Energy, Research, Environment and Sustainability operations areas.

**5.** Roads to transition: Identifying climate risks and opportunities, in line with the TCFD, contributes to defining actions to maintain the reduction levels achieved, guarantee existing commitments, prioritize operational projects and explore investments in low-emission technologies.

**6. Investment and funding:** The Company initiated studies to estimate the cost of the roads to transition. In line with the Company's Sustainable Debt Policy, this work contemplates the issuance of green bonds to secure the necessary funding for long-term climate objectives.

**7. Transparency and credibility monitoring:** The transition plan is supported by a centralized system for monitoring the carbon footprint, with verification in keeping with international standards, such as the GHG Protocol, by an independent third party. The results are disclosed in the Company's Integrated Report and Sustainability Report.

Decarbonization Strategy (Net-Zero Initiatives) TCFD (objectives and metrics)

**2040 Target** Zero net em

Scope 3

### Scopes 1 and 2 SASB (RR-PP-110a.2; RT-CP-110a.2)

In 2024, the Company prioritized projects to strengthen the Scope 1 and 2 roadmap. Taking a cost-efficient approach to addressing decarbonization, it formed cross-functional work teams in the areas of Forest Bioenergy, Projects, Research and Operations, prioritizing competitiveness, safety and efficiency, never losing sight of its 2030 and 2040 targets to reduce emissions. It developed an action plan structured around the following four dimensions:

**1. Maintain the reduction levels** by the Company, treatment of opachieved, through operational excellence and the purchase of Renewable Energy Certificates. by the Company, treatment of operational waste, business travel and employee commuting, and fuel- and energy-related activities not already

**2. Guarantee existing commitments**, aligning competitiveness contracts, which are internal agreements that ensure that factories remain within the top 10% in terms of efficiency on a global level.

 Operational projects, prioritizing plant-led decarbonization initiatives.
 Investment and strategic partnerships, exploring new technologies and low-emission fuels, such as hydrogen, e-fuel and biomass.

In 2024, CMPC reaffirmed the strategy behind long-term contracts for electricity supply from renewable sources. In addition, it integrated renewable energy contracts, the purchase of renewable energy certificates and consumption reduction targets in subsidiaries such as Softys. In 2025, the Company will update these agreements to continue reducing emissions.

challenges lie in the traceability of information and end-of-life treatment, due to the diversity of geography and product uses. Emissions that directly impact the carbon footprint of customers are Scope 1 and 2, in combination with Scope 3 emissions associated with the production and transportation of goods purchased by CMPC and the distribution of products. Under SBTi and GHG protocol, transportation managed by CMPC is classified into category (4) Upstream transportation and distribution, while those managed by customers fall into category (9) Downstream transportation and distribution.

<sup>25</sup>UNFCCC brings together more than 120 countries to achieve net zero emissions. The initiative aims to halve global emissions by 2030 and achieve carbon neutrality by 2050.
<sup>26</sup>Science Based Targets initiative (SBTi) is a global initiative that supports companies in setting emissions reduction targets aligned with climate science and the objectives of the Paris Agreement.

9.VALUE CREATION

# Zero net emissions by 2040\*

\* Residual emissions that cannot be eliminated after reaching long-term objectives will be neutralized through permanent carbon removal and storage, following SBTi guidelines.

According to GHG Protocol, Scope 3 covers indirect emissions produced in the value chain, both upstream before direct operation, and downstream after product manufacture.

Since 2018, the Company has been measuring Scope 3 categories. which has enabled it to define an emissions reduction strategy. Regarding upstream emissions<sup>27</sup>, CMPC focuses on emissions related to purchased goods, transportation of products or supplies purchased erational waste, business travel and employee commuting, and fuel- and energy-related activities not already accounted for in Scope 1 and 2. Downstream emissions<sup>28</sup> include those produced by the transportation, use and end-of-life treatment and disposal of products. The main

### Environmental Product Declarations (EPD)

CMPC strengthened the assessment of strategic suppliers under ESG standards, and in response to customer requirements, it made progress in the publication of Environmental Product Declarations (EPD) for products from the Guaíba and Santa Fe cellulose mills, and from the Maule and Valdivia Boxboard mills, further to the first EPD launched in 2022 for plywood products.

These initiatives not only reinforce the traceability and transparency of environmental impacts across the value chain, but provide a means to assess the environmental performance of suppliers in line with market standards.

<sup>&</sup>lt;sup>27</sup>Refers to emissions associated with goods or services purchased by the company in support of the production of the product portfolio.

<sup>28</sup>Refers to the activities that take place after the product has been manufactured and is ready to be distributed or delivered to the end customer. This flow encompasses distribution, logistics, sales and customer experience. 2.PROFILE

### **Emissions Reduction** Intermediate Targets

SASB (RR-PP-110a.2: RT-CP-110a.2)

**Scopes 1 and 2 Targets** Reduce 50% of these emissions by 2030

**Scope 3 Target** Reduce 37.5% of these emissions by 2035

Scope 1 and 2 targets are validated by the Science Based Targets initiative (SBTi) to limit global warming to 1.5°C above pre-industrial levels, and Scope 3 to keep it well below 2°C.

### Scope 1 and 2 Target Performance (ktCO<sub>2</sub>e)

Categories	2018 (baseline year)	2019	2020	2021	2022	2023	2024	2030 Target
Performance	2,457	2,513	2,210	2,091	2,039	1,892	1,598	1,229
Cumulative change (%)	-	-56	247	366	418	565	859	1,229
Progress (%)	-	-4.6%	20.1%	29.8%	34%	46.0%	69.9%	100.0%

Source: Sustainability Department

Note 1: Values were updated, including recently acquired plants. In addition, the baseline and the target value were updated, maintaining the reduction percentage

### **Scope 3 Target Performance**

Categories	2021 (baseline year)	2022	2023	2024	2035 Target
Performance (ktCO2e)	5,889	6,126	6,114	6,258	3,681
Cumulative change (ktCO2e)	-	237	225	369	-2,208
Progress (%)	-	-10.7%	-10.2%	-16.71%	100%

Source: Sustainability Department

Note 1: SBTi methodology makes it possible to model the establishment of targets with at least 2/3 coverage of Scope 3, when it represents at least 40% of the GHG emissions inventory (Scope 1, 2 and 3)

In 2024 there was a decrease in Scope 1 emissions mainly due to the BioC-MPC project to close the coal-fired boiler operating at the Guaíba plant. Other relevant decreases in emissions were due to lower consumption of aviation kerosene used in firefighting due to a lower incidence of fires in 2024 versus 2023, shorter operating time of Scope 3 emissions data remained the Cordillera electricity cogeneration plant, and the operational stability of the Laja and Pacífico plants.

In 2024, to reduce Scope 2, the Company incorporated the purchase of Renewable Energy Certificates (RECs) for Softys in Colombia and Ecuador, and maintained these for Chile and for Softys plants in Brazil, Argentina and Peru.

similar to 2023, despite the addition of six new plants (Powell Valley, Niuform, Softys Puebla, Rio in Guaíba (Brazil).

Anápolis and Rio Piraí) totaling 458 ktCO<sub>2</sub>e, with a slight overall increase of 29 ktCO<sub>2</sub>e. This increase occurred in the categories of "Purchased goods and services," "Endof-life treatment of sold products" and "Processing of sold products," due to the consumption of good and end-of-life treatment of products from the new plants and higher cellulose production in BioCMPC

In contrast, emissions reduced in "Upstream transportation and distribution," "Waste generated" and "Capital goods," thanks to a more accurate measurement and greater waste recovery, especially for sludge.

### GHG Emissions Intensity from Corporate Offices (ktCO<sub>2</sub>e)

### Internal Carbon Pricing

The Internal Carbon Pricing (ICP) is a tool that enables the Company to internalize the impact of greenhouse gas emissions in decision making, ensuring their alignment with its environmental commitments. Its application aims to as-

sign an economic value to the generation or reduction of emissions, incorporating this criterion into the assessment of projects in critical areas such as investments, purchases and operations. At CMPC, the ICP is a fundamental instru-

ment for prioritizing initiatives that contribute to the Net Zero target, promoting a more efficient and sustainable management. "For its development, we worked with different teams across the Company, where collaboration and willingness were key to an effective application of this tool."

### Climate Change Adaptation Projects and Initiatives in Forests

CMPC develops programs and initiatives focused on mitigating impacts and increasing adaptation to climate change.

### 1. Phytosanitary protection program

Led by the Planning and Technology Department in Chile, the program focuses on biological monitoring and control of pests and diseases that, due to climate variability, increase the risk of damage to forest plantations and native vegetation. Within this framework, the Company is developing the Corinectria Modeling project, which uses climate modeling to identify areas at risk of the pathogen in CMPC assets. This initiative is carried out in collaboration with the Universidad Austral de Chile, contributing to climate change adaptation.

# 2. Breeding and ecophysiological management programs

Under the R&D&I Department, these projects integrate advanced criteria such as water use efficiency and drought tolerance, essential for the

selection of genetic material adapted to future conditions.

### 3. Climate change adaptation project in forestry, productivity and impact reduction.

Developed in partnership with the Universidad Austral de Chile in two stages—from 2021 to 2024, and from 2024 to 2027—this project analyzes the impact of climate change on the growth and occurrence of fires in *Pinus radiata* and *Eucalyptus nitens* plantations, according to theoretical scenarios from the IPCC. It includes the proposal of adaptive actions to improve forest management practices by analyzing fires, productivity, pests and costs through the use of modeling, databases, simulators and training.

# 4. Fire protection and prevention program

CMPC implements preventive and collaborative strategies such as:

**a. Forest fire prevention:** This aims to reduce the risk of wildfires through planning and integrated management, with machinery, technology and reduction of fuel use. Developed in conjunction with other companies, CORMA and CONAF.

**b. Protection corridors:** CMPC has worked in collaboration with CONAF,

CORMA, municipalities, electricity companies and other state administration agencies to create two biological corridors that connect landscapes, ecosystems and natural or modified habitats to preserve and enhance biological diversity, ecological processes and evolutionary flows.

**c. Community prevention network:** This promotes education and a culture of prevention against rural fires through committees formed by communities and public and private organizations to reduce the occurrence and severity of these events.

# 5. Other climate change adaptation programs

Collaborative research projects, including:

**a. Eucahydro (4th generation):** This evaluates the relationship between water stress and carbon sequestration in eucalyptus varieties, together with North Carolina State University and Universidad de Concepción.

**b. Estimation of aboveground and belowground carbon in radiata pine:** This determines carbon stocks in soils of diverse productivity. Prepared in collaboration with the Co-operativa de Productividad Forestal, Universidad de Concepción and North Carolina State University.

c. Potential productivity modeling:

Climate adaptation project, which generates climate projections for forest management planning, developed in conjunction with the Cooperativa de Productividad Forestal, Universidad de Concepción and North Carolina State University.

### Ecophysiology Strategy

In 2024, the R&D&I Department moved forward with the Ecophysiology Strategy, focused on the productivity, carbon and water pillars. The work involved with this strategy will include the parameterization of process models to estimate the potential productivity of commercial species, the generation of climate scenarios by simulating climate variations, and the development of an integrated methodology of historical and future information for Chile, Brazil and Argentina.

### Strategic Partnerships to Address Climate Change

In 2024, CMPC strengthened strategic partnerships and collaboration spaces. In Chile, it participated in the National Simulation Model, a forestry modeling center that brings together companies, universities and CONAF.

In Brazil, it participated in the Iba Climate Change Committee, working with various stakeholders to define strategies aimed at eliminating carbon and meeting climate change challenges. It also supported the creation of agencies to represent the sector in international negotiations, especially at climate COPs, in collaboration with the Brazilian Ministry of Foreign Affairs, the Ministry of the Environment and other entities.

It also contributed to the draft letter "Positioning of the Brazilian business sector on the urgency of creating a Regulated Carbon Market in Brazil," promoted by the CEBDS (Conselho Empresarial Brasileiro para o Desenvolvimento Sustentável). This document urges the government to adopt public policies that reduce the

### Energy Efficiency Initiatives

GRI (302-4)

The Company is making efforts to improve the use of energy in its operations. In 2024, it implemented energy efficiency initiatives in its plants, which have resulted in energy savings of 258.66 GWh. Some of the initiatives implemented are listed below.

# As a result of several operational efficiency initiatives, the Company has reduced its energy consumption by 258.66 GWh.

# **Environmental Operational Ef-ficiency**

CMPC applies an operational and project environmental management model that prioritizes flawless operation throughout its value chain. This model is based on: 1) identification of environmental aspects, 2) control of operational risks and 3) generation of cross functional standards that guarantee ongoing improvement. It implements the following standards for this:

1. Management of operational incidents with environmental consequences: The model establishes governance and mechanisms for

reporting, classifying, assessing and investigating incidents with environmental impact.

2. Incorporation of environmental variables into investment projects: It defines roles and governance to include socioenvironmental considerations from the early stages, minimizing risks and guaranteeing quality, time and costs.

3. Intervention of critical environmental equipment: Ensures the correct operation of critical equipment for environmental control during interventions.

**ning:** It implements mandatory actions to ensure sound processes and avoid negative consequences on people, environment and communities.

CMPC's Environmental Management System is certified, audited and verified through methodologies adapted to its operations. It is currently under review to ensure its cross-functionality and alignment with global best practices.

### Air Quality

Operations are governed by compliance with air pollutant control requlations and the limits established in each country. In 2024, emissions indicators experienced fluctuations due to operational adjustments, such as equipment maintenance in optimal 4. Best practices for flawless plan- conditions. In addition, the Company achieved a reduction in particulate matter thanks to the implementation of the BioCMPC project in Guaíba.

2. Operational front: Implementaat restoring plants and processes to their original design conditions.

The Water Roadmap is a strategic 3. Innovation front: Development of improvements focused on research and technological innovation.

tion of technological improvements The Company has reduced water use between 2018 and 2024 by 16%  $(4.82 \text{ m}^3/\text{t})$ , equivalent to 63% of the tion of operational measures aimed target (7.70  $m^3/t$ ). In early 2024, the accumulated reduction was 10%; in view of this, CMPC implemented

projects on technological and operational fronts, adding an additional 6% to this. This was achieved thanks to the detailed assessment of projects and actions for the reduction of water use, ensuring their effective implementation and the operational stability of the plants to meet the established target.

The main projects and initiatives that move the Company closer to its target in Celulosa and Biopackaging are the following:

Softys achieved a specific regional water use of 15.6 m<sup>3</sup>/t, a decrease of 0.9 m<sup>3</sup>/t compared to the previous year. This achievement was made possible by several key initiatives at its plants:

1. Zárate Plant: The implementation of operational and management initiatives enabled the Company to reduce specific water use by 18% by 2023. These actions include the reactivation of water recirculation from the effluent plant to the paper machine, the replacement of fresh

water with recovered water in the MP1 and MP2 dust extractors, and the optimization of vacuum pumps and gaskets. 2. Sepac Plant: It implemented a system for recovering sand filter backwash water in the industrial water treatment plant (ETA), resulting in a reduction of 1.6 m<sup>3</sup>/t in water consumption.

3. Talagante Plant: The plant implemented a water recirculation project from the effluent plant to the paper machines, achieving the recirculation of 30% of the water used, optimizing consumption in the production processes.

2024 INTEGRATED REPORT 289

#### **Fair and Conscientious** Water Use

The Company implemented a methodology to determine the price of water, considering its current and future availability in the watersheds where it operates. This approach quantifies the economic risk associated with water scarcity and prioritizes projects with lower water use.

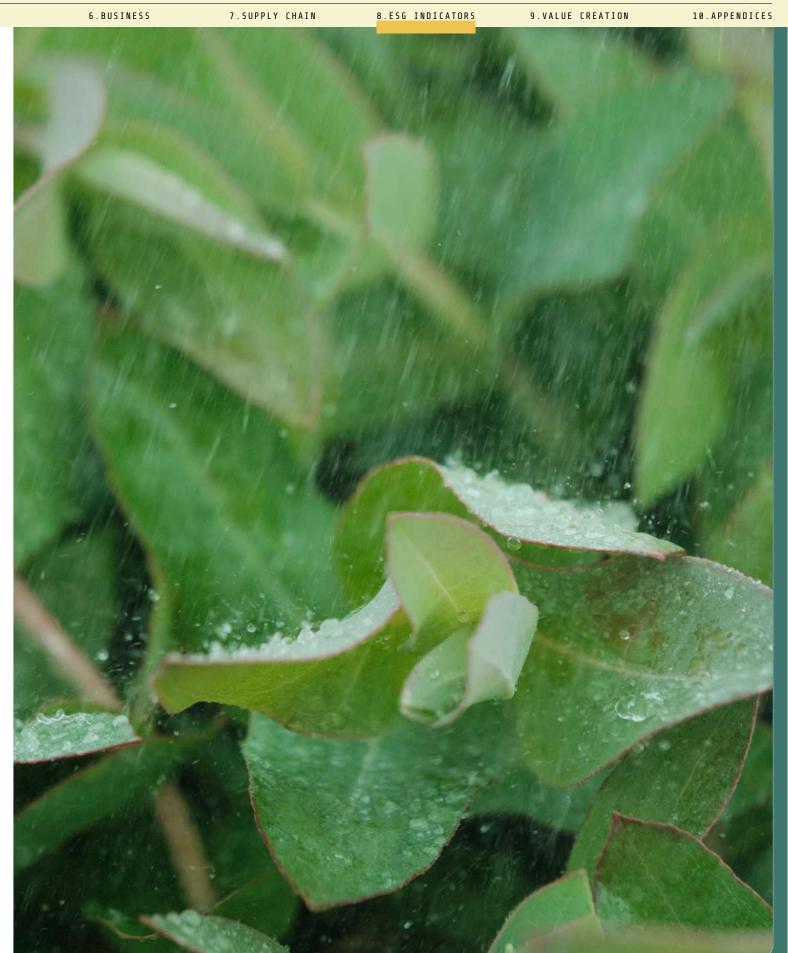

The model integrates operational costs, such as chemical and energy inputs, and a shadow water price, which reflects the risk of reduced availability in the future. The Company uses the Water Risk Monetizer tool for this purpose, which projects 50year water and social scenarios, assessing the impact of climate change and competition for the resource.

Incorporated into the Company's project assessment standard, this methodology assigns an economic value to water and prioritizes water use reduction projects. This has led to significant investments aligned with the water reduction target. The results make it possible to prioritize investments in projects that reduce water use and ensure efficient and sustainable water use in the long term, in line with climate and social challenges.

In addition, the Company has worked in collaboration with other companies to strengthen water management in the industry and share best practices.

"The Fair and Conscientious Water Use project was a significant challenge for me, especially in the process of researching tools and methodologies to calculate a shadow price. Although I had used the Water Risk Monetizer tool before, we developed a standard at CMPC to use systematically in all operations, calculating the Fair and Conscientious Value of water for each plant. As part of the work undertaken, we also communicated this methodology to the organization to raise awareness and strengthen culture around water use. We have economically assessed all projects involving water use, supporting the decision-making process for this type of project."

> Daniela Salinas Gordillo Research Engineer, CMPC

# Waste and **Bioeconomy**

SASB (RT-CP-410.a.3; CG-HP-410a.2)

The circular economy is a fundamental part of the business, based on natural forest fiber, which is transformed into renewable and recyclable materials. This approach optimizes resource use and minimizes waste throughout the production chain.

In this line, CMPC reuses waste as supplies for new production cycles, recycling its own and third-party raw materials. This minimise waste sent to landfills, prolongs the useful life of resources and creates social benefits by providing income to paper and cardboard collectors.

The Company promotes the circular economy by integrating sustainable practices throughout its value chain. Through its Maule and Cordillera plants, it participates in a Clean Production Agreement (APL), a Chilean mechanism that optimizes processes and minimizes environmental impacts through the use of renewable materials. Notable initiatives include VIDA in Brazil and vermicomposting at the Laja and Pacifico plants, which focus on recovering waste for the recovery of degraded soils. In addition, CMPC participates in the CORMA Working Group, which promotes circularity in the forestry sector.

#### **Renewable Materials**

The use of renewable materials comes mainly from cellulose and non-renewable materials from fossil fuels, minerals and metals in the manufacture of products.

3.GOVERNANCE

#### **Sludge Recovery** at Cordillera **Effluent Plant**

As part of its commitment to the circular economy, the Company implemented a sludge recovery project at the Cordillera effluent plant, reducing its disposal in landfills and promoting sustainable reuse alternatives.

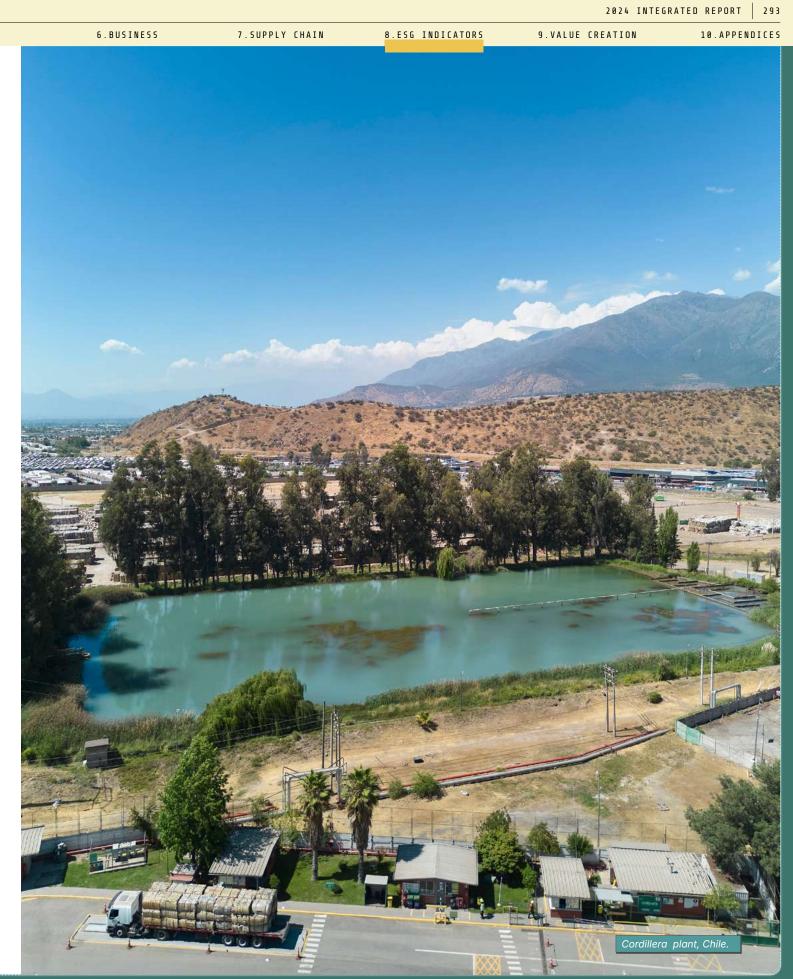

The initiative addressed the management of 1,550 metric tons of paper sludge per month, optimizing its transportation and exploring recovery strategies, such as anaerobic biodegradation in bioreactors, composting at new sites and recycling the primary fiber into molded pulp. Thanks to this project, sludge disposal in landfills will reduce from 18,606 tons in 2021 to 0 tons in 2024.

Sludge is currently processed at nine recovery sites, involving a monthly treatment of 5,310 metric tons through biodegradation and composting. CMPC works with Bioenergía Molina and RILSA SPA for anaerobic biodegradation and J Compostaje, Reciclaje Orgánico SpA, Idea Corp and Resiter - Verde Corp for composting. In addition, Chimolsa SPA recycles the fiber from primary sludge for use in molded pulp.

This development reflects the Company's commitment to waste reduction and resource use optimization, promoting the generation of biogas and other by-products for more efficient and sustainable management.

"One of the key moments for me was seeing the first results of zero waste sent to landfills. Sludge, which used to be disposed of, is now given a new use as it is converted into biogas and other reusable products. This breakthrough demonstrates the impact of applying the principles of circular economy, reducing waste and generating clean energy. The implementation of composting and fiber reuse has enabled us to transform a waste product into an opportunity for efficient use."

> Claudia María Arauzo Ayre, Head of Environment Unit, CMPC

Note 1: Values were updated, including recently acquired plants. In addition, the baseline and the target value were up-dated, maintaining the reduction percentage.

To achieve the target of zero waste ing reuse, recycling and composting, to landfill by 2025, CMPC prioritizes and defines final disposal in landfill avoiding waste generation, promot- as the last option.

#### This comprehensive approach encompasses four fundamental pillars:

<b>1</b> Baseline and infor- mation management	2. Compliance with environmental and sectoral obligations	3. Impact prevention management	<b>4</b> Forward-thinking solutions
Establish clear metrics to monitor and assess progress.	Ensure alignment with applicable environmental and sectoral obligations.	Implement measures to minimize environmental risks associated with was- te generation.	Design solutions that respond to future needs in waste management.

## **Impacts of Waste Generation** and Management

GRI (306-1; 306-2)

The main risks in waste management are associated with potential failures in operational controls, causing liquid waste spillage, incorrect waste separation and mixing of hazardous and non-hazardous waste. To mitigate these risks, CMPC implements hazardous waste

management plans and preventive measures under the supervision of the Waste, Emissions and Obligaquidelines to broaden the scope of al waste. These measures include processes. third parties that provide recovery services and involve verification of their compliance with impact control measures in the field.

## 2025 Target Zero waste to landfill by 2025.

One of the main initiatives in 2024 was the collaboration with CORMA to reduce the amount of waste on tions Division. It also establishes a sectoral level. This collaboration promotes the concept of by-prodmanagement plans, including the ucts, encouraging the reuse of cercontrol of non-hazardous industri- tain waste as raw material for other

## **Project** Assessment

GRI (413-1)

Motivated by the goal of being an agent of change in local development, CMPC's social investment projects and initiatives implemented in conjunction with communities generate value in the territory and contribute to the longterm sustainability of the business, in line with the corporate strategy.

The social assessment processes allows CMPC to refine actions and strategies to ensure that the Company initiatives maximize their potential to transform opportunities in the territory.

#### Social Assessment Plan

The Company established the target to implement 5 assessment processes for different social investment projects in 2024.

The projects selected for these processes were CMPC DUOC Nacimiento. Primeros Pueblos (First Nations), Rutas Fluviales (Waterways), Comunas Sin Basura (Trash-Free Districts) and Favos do Sul, which underwent logical, process, results or impact validation assessment processes.

These assessment processes led to adjustments to achieve better results in the territory.

#### **Integrated Social** Manágement System

CMPC's integrated social management system is a key tool for community engagement. By combining information on engagement and investments in the territory with Company assets, it provides a better understanding of the strategic focus of these resources.

In 2024, the Company made progress on its structuring and functionality, improving the effective management of information regarding different stakeholders and their engagement.

## Human-Territory **Wellbeing Matrix**

The Human-Territory Wellbeing Index shows the likelihood of obtaining wellbeing in the territory, based on access to infrastructure, services and spaces free from pollution or risks. This tool lets the Company focus social investment and simulate its impact on wellbeing. These assessments complement the assessment process for social investment projects, integrating the capacity to assess ex-ante the potential results on wellbeing in the territory.

In 2024, CMPC strengthened public data analysis to characterize communities, assessing their vulnerability and the potential impact of new projects on a block level based on a grid of the town. In this way, it was able to prioritize interventions and measure the individual impact of each initiative, refining criteria such as depth of value creation, social benefits and budget analysis. With this approach, the Company aligned its strategic decisions with local needs and its sustainability objectives, ensuring a more efficient and social development-oriented management.

#### **Preparation of the Master** Plan in Nacimiento with the Universidad del Bío-Bío.

CMPC collaborated with the Universidad del Bío-Bío to develop ment in neighborhoods near its long-term vision, prioritizing infrastructure and sustainable devel-opment.

The process included a participatory survey with the comidentify infrastructure, basic serIt focused on the neighborhood located across from the CMPC plant, where 5,000 people live in a district of 25,000 inhabitants.

The Universidad del Bío-Bío proof the plan, making it possible to define priority actions. The project is currently in its final phase.

Given the results obtained, CMPC plans to replicate the methodol-ogy in Villa Mininco and Laja in 2025, applying the same particcollaboration with specialized in-

## Value **Creation Areas** (ACV)

CMPC focuses on seven strategic areas to generate a positive sustainable impact on its stakeholders and the environment, with a total investment of USD 13,249,182 in these initiatives.

FSG 29 CMPC (7); CMPC (11)

#### **Culture and Integration** Total investment in 2024: USD 80,940

Promote the cultural preservation of communities, highlighting unique aspects of interculturality in each territory. To this end, it places emphasis on the recovery of traditional and linguistic elements, promoting the development and integration of local customs as an essential part of community identity.

#### Preservation and Recovery of the Archaeological Heritage in the San Alonso Ruins

The Timbauva property, located in Virasoro, Corrientes, Argentina, is home to the Capilla de San Alonso archaeological site, a 4.3-hectare complex that

houses 18th century Jesuit ruins, including the Jesuit Guaraní Chapel, the Rural Cemetery and its natural native forest surroundings. This is a Cultural Heritage Site of the Province of Corrientes and a Site of Historical and Cultural Interest under Provincial Law No. 6055, recognized as a High Conservation Value Area.

## **Education and Capacity Building** Total investment in 2024: USD 3,638,357

Contribute to equitable access to quality education in the areas of influence. To this end, the Company develops educational infrastructure to foster learning and skills development and to promote local professional opportunities. The aim is to provide opportunities for talents in the region to train and develop professionally in their place of origin, avoiding the need to emigrate.

#### **Technical Training and Community Development: the CMPC DuocUC Nacimiento Campus Initiative**

The establishment of the CMPC DuocUC Nacimiento Campus represents a significant milestone in strengthening technical and vocational education in the Biobío Region. Built in 2022, the center was designed to respond to local needs, becoming a pivotal element in the education and training of young people and adults in the province.

The center is organized around three main lines of action: Technical and professional education, aimed at young people who have finished high school and are looking to enter the labor market, with special emphasis on dual education in CMPC plants.

• Job training and ongoing education programs, which look to improve the employability opportunities of neighbors by connecting their skills with the demands of the regional market.

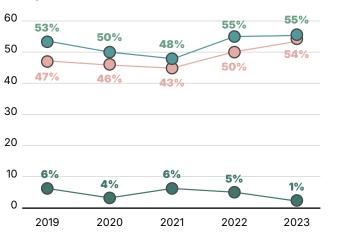

• Entrepreneurship area, to be implemented in 2025 to support local entrepreneurs with specialized tools and resources.

In 2024, the Company reaffirmed its commitment to education through a private scholarship program that supports students with funding and transportation.

It expanded the scholarship program, benefiting 38 students on campus. Of these, 23 renewed their scholarships and 15 were granted scholarships for the first time. Aimed at those who were not awarded full government aid and are socially vulnerable, the scholarships cover tuition, fees and study materials. To mitigate travel distance, CMPC implemented a free shuttle service. In 2024, there was evidence of an increase in enrollment and an improvement in the quality of the selected institutions.

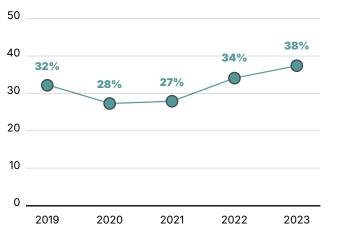

Enrollment upon graduating from high school (4th year)

Communes of interest O Rest of the region Difference

Percentage of enrollment in institutions with seven years of accreditation

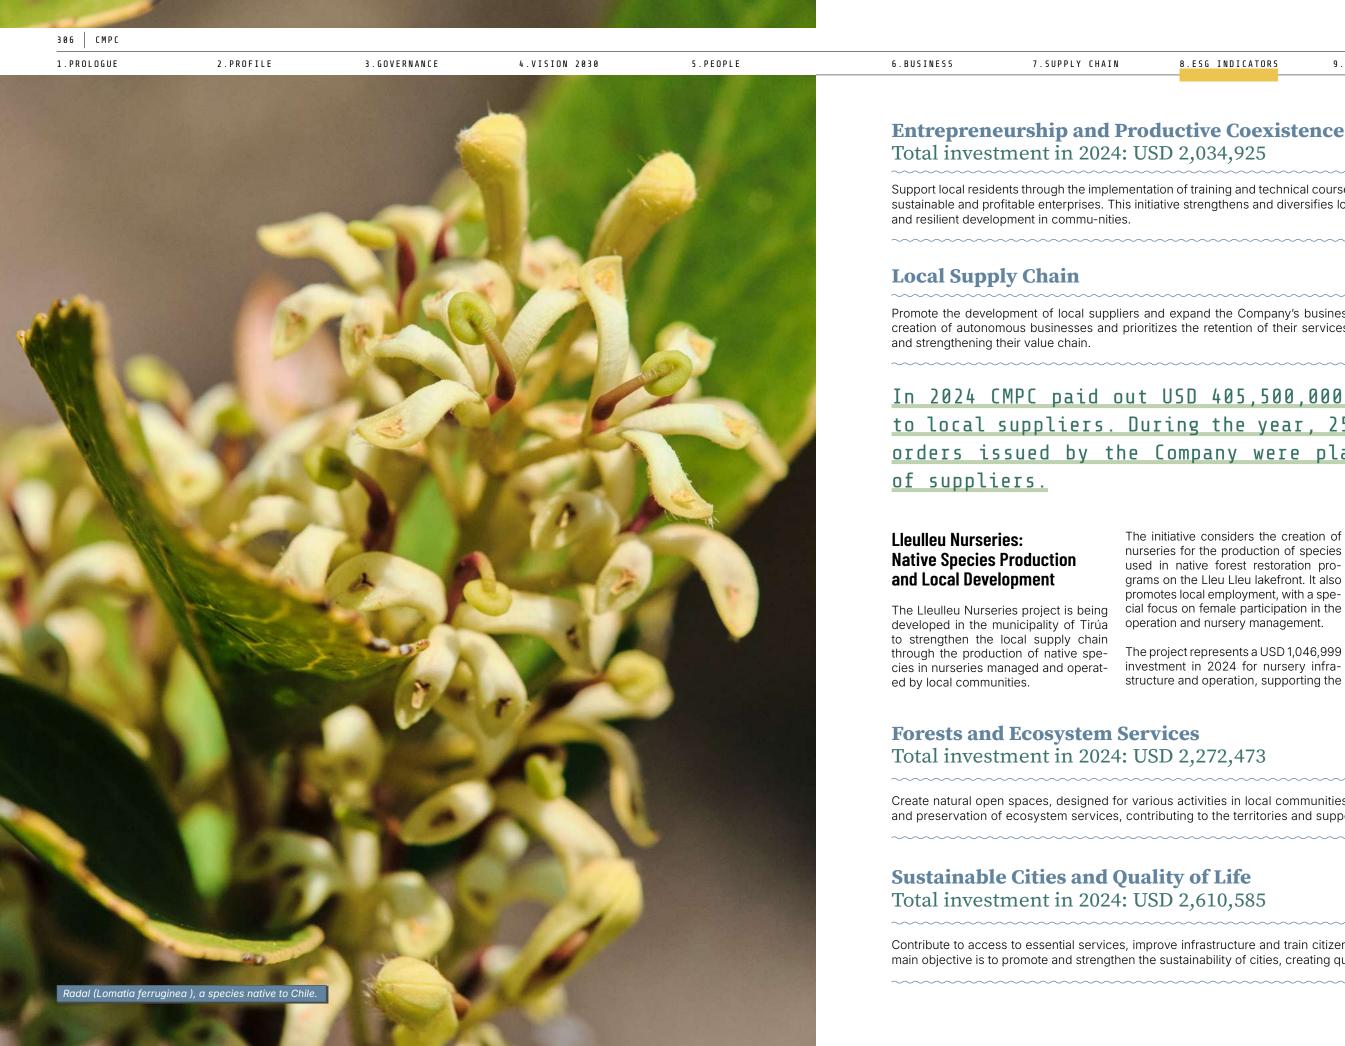

"Thanks to the CMPC Scholarship I was able to ease the financial burden of my studies. I did not have full government aid my first year, so this scholarship was critical to continue my studies. It also gave me access to essential materials such as a computer and printer, in addition to meeting daily needs. It is a fundamental support for those who have the talent and desire to study, but face economic difficulties. Hopefully more students can access this opportunity and fulfill their academic goals."

#### **Promoting Tourism** and Entrepreneurship in the Nahuelbuta Mountains

CMPC works with the Agrupación de Turismo Ecoruta Nahuelbuta to strengthen tourism in Angol and support local enterprises. As part of this initiative, it has restored more than 400 hectares of native forest in Junquillar Park, with trails and viewpoints that are open to the community. In addition, it has improved roads and created new tourist circuits, promoting forest restoration and the development of services in Los Corrales.

"Our organization brings together 15 enterprises that offer lodging, trails and experiences connected to nature. With the support of CMPC and other stakeholders, we have consolidated a tourist route that connects different parts of Nahuelbuta. Through this work, we have been able to improve our infrastructure and strengthen our activities. Public and private investment has been key to the growth of our projects, allowing us to offer sustainable and attractive services to visitors. We continue to move forward in the development of initiatives that enhance ecotourism and environmental conservation."

**30 INNOVATIONS FOR THE BIO-FUTURE** 

#### **Bosque Vivo Park** Network: Access to Natural Spaces

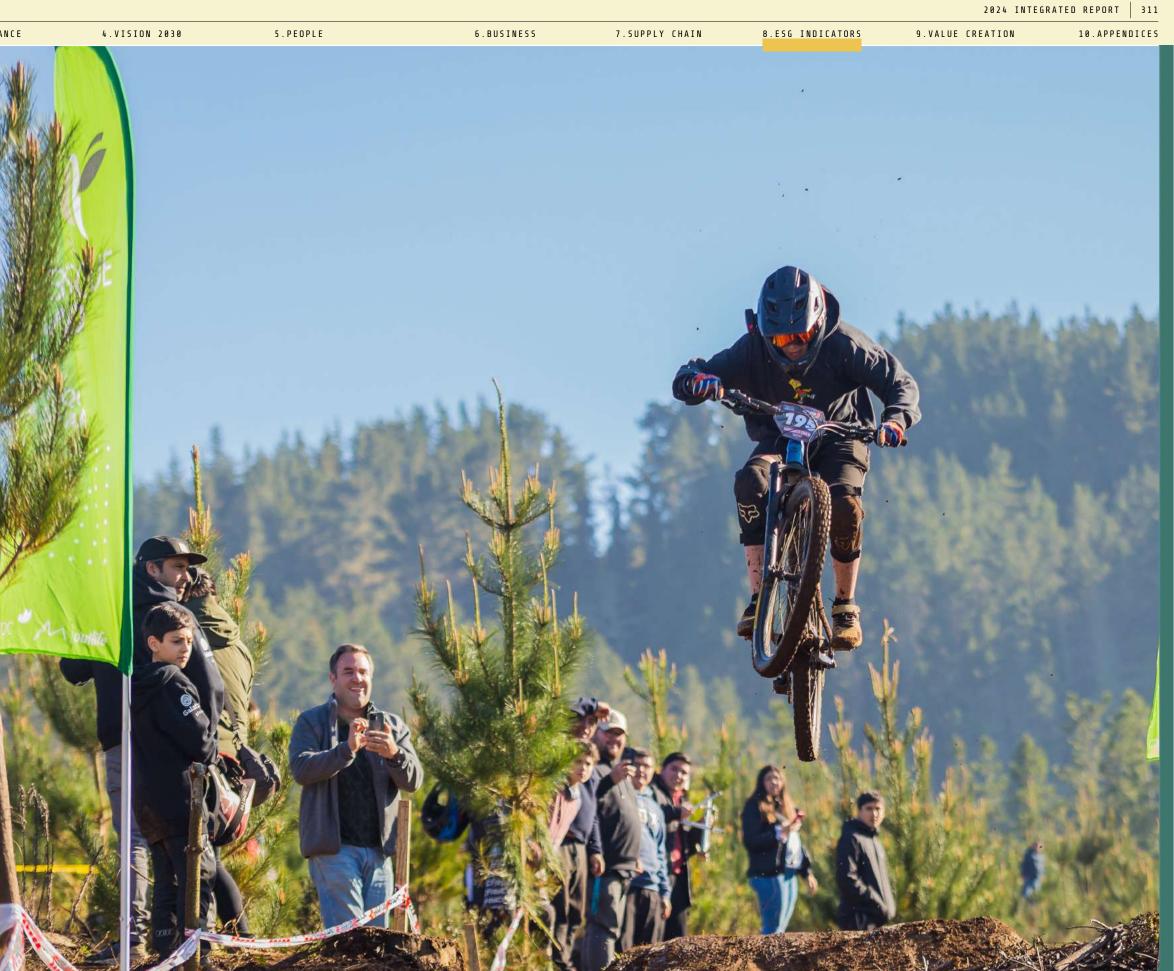

CMPC has implemented the Bosque Vivo park network, an initiative that aims to value the ecosystem services of forests and productive plantations. Through this network, the Company provides spaces for recreational and athletic use by the communities, promoting outdoor activities and coexistence with nature.

CMPC Lastarria Park located in Loncoche is part of this network and has an area of 1,783 hectares. It has developed nine mountain bike trails, two trails for trekking and trail running, lookout points, a children's playground and a picnic area in its facilities.

The initiative is part of CMPC's commitment to providing community access to forest areas. It has designed circuits and equipment in this park to facilitate access to different activities, providing access to the territory for recreational and athletic purposes.

The project is supported by Outlife, a company specialized in the creation of outdoor spaces. In collaboration with local stakeholders, it has developed infrastructure and planned circuits adapted to diverse athletic activities.

In addition to CMPC Lastarria Park, the Bosque Vivo network includes Pumalal, Junquillar and El Cóndor parks, integrating different ecosystems and promoting access to natural areas. The initiative generates a positive impact on local development, combining forest conservation with recreational activities and contact with nature.

#### Fibra do Bem: Disaster Assistance

In 2024, the Rio Grande do Sul region of Brazil suffered one of the most severe floods in its history, which killed more than 180 people and displaced some 380,000 people. Through its Guaíba plant, CMPC supported the affected communities without interrupting operations.

#### **Program stages:**

#### 1. Rescue and shelter support

The first stage focused on rescue work and helping shelters to set up to receive displaced people. In the first hours, these shelters took in more than 12,000 people. CMPC coordinated resources to ensure that the shelters would have the necessary supplies, contributing to the initial stabilization of the conditions of those affected.

#### 2. Rebuilding homes

The second stage focused on rebuilding homes through the "2+1" campaign, which involved the participation of CMPC employees and service companies. The Company assumed between 80% and 90% of the costs associated with the repair and reconstruction of the homes of its affected employees.

The program also included additional actions aimed at strengthening local community engagement and promoting sustained recovery. These initiatives sought to build trust and establish long-term collaboration mechanisms between CMPC and the communities of Rio Grande do Sul, preparing a foundation for future emergency response. "The floods put us to the test beyond our day-to-day work. Within hours, many of us lost our homes and saw the safety of our families at risk. However, **in the midst of the emergency, I saw the solidarity of CMPC and my colleagues.** They organized rescues, provided financial and psychological support, and Fibra do Bem volunteers helped with the cleanup of the affected homes. Colleagues opened their doors, prepared food and collected donations. At this difficult time, we saw values of collaboration and respect **in every person at CMPC.**"

#### Impact Information

2.PROFILE

#### **Softys Contigo Program**

Program aimed at improving living conditions in Latin American communities through the following three lines of action:

#### Water and sanitation

This line covers the implementation of solutions such as water filtration systems, construction of sanitation facilities and development of water infrastructure, contributing to improving access to essential resources.

#### **Hygiene education**

It teaches healthy hygiene practices, which are fundamental to improve the quality of life and prevent diseases in the beneficiary communities.

#### Help in emergencies

This program provides timely and efficient support to communities affected by critical situations, such as natural disasters or pandemics, ensuring access to basic hygiene, water and sanitation services at times of greatest vulnerability.

Softys has developed solutions to improve access to water and sanitation in different countries. In Peru, 2,540 people obtained access to water purification systems, in Argentina 45 families improved their access to housing and sanitation, and in Uruguay, 24 bathrooms were built for 100 residents. Through the Ayuda Oportuna pillar, it provided assistance in emergencies in Mexico, Chile and Argentina, as well as support to institutions that provide more than 388,000 services a year. In Brazil, Ecuador and Chile, it promoted hand washing and hygiene habits in communities with limited access to water. The program continues to expand its impact. "The water we consumed was not really potable. We extracted it from the subsoil and used it as is. With the program, the change was radical. Not only did it improve the supply infrastructure in Santa Angela, but they also taught us how to properly chlorinate, maintain equipment and understand the importance of safe water. Now we know that what we drink is healthy, and that gives us peace of mind. Softys Contigo did not only come to help, it came to stay."

#### **Community Empowerment** in Brazil: Instituto CMPC **Initiatives**

Instituto CMPC promotes projects in Brazil to strengthen community engagement and foster local development, creating cultural and educational spaces, as well as family and community support programs.

#### Casa CMPC

In 2024, Casa CMPC in Guaíba was approved, a space for cultural, educational and community engagement activities. Its construction will begin in 2025.

#### **Criando y Creciendo Program**

In 2024, the Criando y Creciendo program was implemented in Brazil, adapted from its Chilean version. In Barra do Ribeiro, 12 families participated in a cycle of seven workshops designed for the local context to strengthen emotional development and family dynamics. In addition, as part of the Fibra do Bem initiative, the program supported communities affected by floods with psycho-educational kits and activities in shelters.

#### **Educational Support**

The CMPC Institute promotes educational programs in rural schools in forest areas, including literacy programs adapted to the local context. A notable program is the Primeras Letras program, focused on strengthening reading and writing in communities with low literacy rates.

#### **Cultural and Recreational Programs**

This space will be used for cultural and recreational activities focused on children and families, integrating participatory workshops to ensure the collaboration of communities in its development and operation. In addition, the foundation aims to promote access to cultural and educational activities through innovative social and community initiatives.

#### **Escuela del Bosque CMPC**

in Temuco, Angol, Nacimiento, Laja and San Rosendo, including subsidized and paid schools. It incorporated a log The Escuela del Bosque CMPC educates about forests and book adapted for each level and held workshops on the their connection to society. In 2024, it added 23 schools Día de los Cerros (Day of the Hills) in Santiago.

#### Annual Growth Indicators for the Forest School

### Jugar, Leer, **Crecer Program**

The reading and writing program, now in ten municipalities, including Santa Juana in 2024, strengthens Language Didactics Conference, orcomprehensive reading as a key learning process. This year it added literacy practices of the Corporación La Frontera.

Bien Público and presented its "Empieza con A" methodology at the First ganized by the Universidad Católica de Temuco and the Universidad de

#### **Reading speed and fluency:**

• 45.47% of second grade students reached the "Achieved" category in reading speed and 67.73% in reading fluency.

• 62.61% of first grade students reached the "Achieved" category in reading speed and 59.42% in reading fluency.

#### Significant improvements in reading skills:

• In the application of Dialect to 613 second grade students from 29 schools, Cohen's D analysis yielded an effect size of 0.93, indicating a significant improvement. Average scores went from 16.43 (before) to 23.78 (after), an increase of 7.43 points.

• The number of students in the "Deficient" category decreased significantly, from 459 to 292. Likewise, the percentage of students in the "Satisfactory" and "Advanced" categories increased to 31.49%.

#### **Training educators:**

• 79.05% of teachers and educational leaders acquired valuable pedagogical tools and knowledge for teaching reading.

• 87.85% of teachers felt that the "Jugar, Leer, Crecer" program provided them with effective strategies to support their students in the classroom.

#### **Reading recovery:**

• Of the total of 404 third and fourth grade students who participated in the sessions, 71% reached the appropriate reading levels for their school level.

· Among the students who successfully completed second grade, 38% had special educational needs and 47% made significant progress in third grade.

"I feel very grateful to have had the opportunity to implement Fundación CMPC's reading instruction program in my first grade class. This tool not only allowed me to achieve the objectives of the Spanish Language subject as established in the national curriculum, but also gave me the opportunity to see how my students grew and developed in their reading and writing acquisition process. The systematized and progressive structure of the program allowed me to plan and teach effectively, and the activities and games encouraged collaboration and teamwork. In summary, the program was an enriching experience and an invaluable tool for my teaching practice."

A M

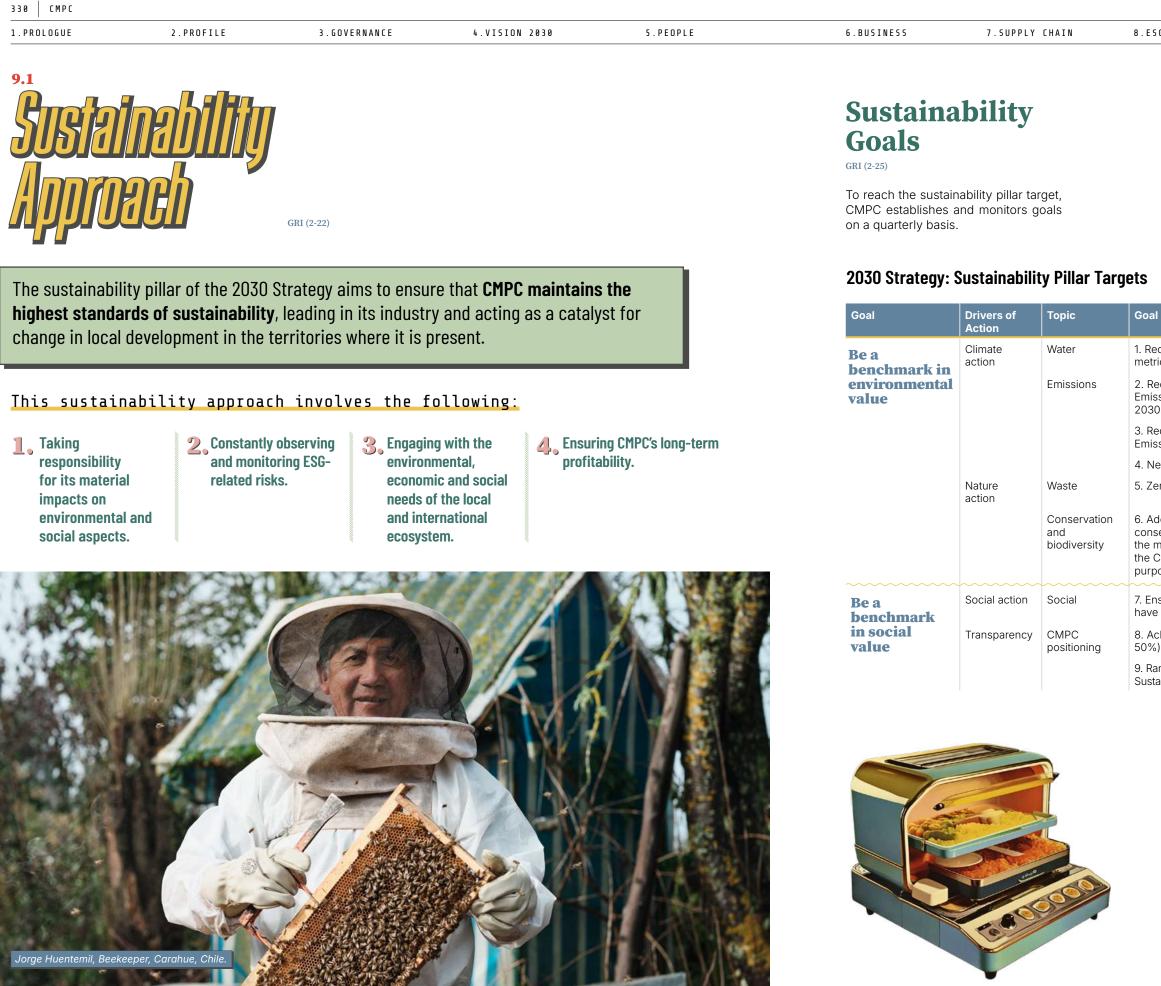

Cellulose is utilized in food processing, especially as a thickener, due to its ability to improve the texture and viscosity of products such as sauces, soups and desserts. Moreover, being a natural and caloriefree ingredient, it is a healthy and sustainable option, without altering the flavor or quality of the product.

<sup>1</sup> The Net Zero commitment involves meeting the commitments aligned with the science of scope 1, 2, and 3 emissions. To achieve this, emissions must first be rapidly reduced, and then capture and removal of residual emissions should be incorporated into the inventory to achieve net zero by 2040. The calculation of emission captures from CMPC's forests will be worked on according to the removal guidelines of the GHG protocol once it is published.
<sup>2</sup>According to international guidelines and consensus (Zero Waste International Aliance, EPA, WRI, Europe Zero Waste, among others), the concept of "zero waste to landfill" refers to a deviation towards recovery treatments of at least 90% of the waste sent to landfills, controlled disposal areas or dumps with respect to a baseline.

# Double **Materiality** Analysis

GRI (3-1)

#### ment (DMA), we are able to identify the potential positive and negative impacts that our Company has on the envi- In 2022 the Company developed a ronment and people, including human double materiality assessment based rights. This also integrates risks and on 4 steps:

Through a double materiality assess- opportunities that may influence longterm value creation.

To understand the context and identify impacts, risks and opportunities

Stakeholder consultation and assessment of impacts, risks and opportunities risks and opportunities

Prioritization of impacts,

The Company identified 21 material issues through this process. The Company updates this assessment annually to integrate new topics that may be relevant to its industries. This takes into account the social, local and regulatory context, The update involved the following: as well as stakeholder expectations.

For more details on the 2022 Double Materiality exercise, please review the **2.** Review of material impacts on an in-Company website here:

# 2024 Materiality **Update**

GRI (3-2)

This update consists of an assessment of the relevance of each material topic. The Company examined the topics to understand whether the impacts, risks

and opportunities complement each other as a whole, independently, or from a materiality perspective, if they do not correspond to a material topic.

1. Simplification of names to facilitate comprehension and alignment with industry standards.

dustry level to identify common topics, as well as new and different topics. 3. Merging of topics around common objectives.

4. Elimination of topics that are not material in the current context.

5. The update did not modify the structure and prioritization of the topics, as these were verified under GRI methodology.

This review resulted in 15 material issues, of which 10 correspond to tier 1:

Management of each of these material

issues is discussed in greater detail in

• Sustainable financing

the corresponding chapter.

Water

**Customers and brand value Emission and effluent control** 

**People development** 

**Rural fires** 

**Innovation and biosolutions** 

**Forest management** and ecosystem protection

**Community engagement** 

Waste and bioeconomy

**Rural fires** 

In addition, four topics correspond to Tier3: tier 2 and one topic to tier 3.

#### Tier2:

- Diversity and inclusion
- Climate change
- Responsible sourcing
- Ethics and transparency

In 2025, CMPC will work on a new Double Materiality Assessment (DMA).

CMPC participates in the **following relevant associations** on sustainability matters:

• World Business Council for Sustainable Development: This council promotes the transition toward sustainability in business. CMPC has been a member since 2011 and participates in the Forest Solutions Group.

• Global Compact: UN initiative to implement sustainability principles and achieve the SDGs. The Company has been a member since 2018 and the Chief Sustainability Officer occupies the position of Vice Chair in Chile.

• **CDP:** Global environmental reporting system. CMPC has participated since 2013 to ensure high standards of transparency in emissions, water and forests. Acción Empresas: CMPC has been a member since 2017 and collaborates

on topics such as circular economy. • CLG Chile: Initiative for climate ac-

tion. A member since 2009, the Company has an active role in climate regulation and public policy.

 Sociedad de Fomento Fabril (SOFO-FA): This Chilean business organization collaborates on industrial development and sustainability initiatives.

 Confederación de la Producción y del Comercio (CPC): This Chilean entity promotes public policies that foster economic growth and social responsibility.

 AmCham Chile and AmCham Brazil: A member since 2003, CMPC leads sustainability committees in both chambers. • FSC (Forest Stewardship Council): This international organization issues a certification that guarantees environmentally, socially and economically responsible forest management.

• PEFC (Programme for the Endorsement of Forest Certification): This global certification system promotes forest sustainability through internationally recognized standards that are adapted locally.

 Chilean-British Chamber of Commerce: This chamber promotes climate change action in the business sector. A member since 1996, CMPC participates on its sustainability committees. Industria Brasileira de Árvores (Ibá):

Representation of the forestry sector in Brazil. CMPC collaborates on sustainability and responsible forest management.

 Conselho Empresarial Brasileiro para o Desenvolvimento Sustentável (CEBDS): This is a forum for sustainability dialogue. CMPC has been a member since 2022.

• The Forest Dialogue (TFD): This is a global initiative for dialogue and solutions on sustainable forest management.

• Diálogo Forestal Nacional (DFN): This local Chilean initiative was derived from TFD and created in 2009 to create solutions for the forestry sector based on dialogue, participation and collective construction.

• Diálogo Florestal: A local Brazilian initiative derived from TFD, which facilitates interaction and dialogue between representatives of companies, sectoral associations, civil society organizations and stakeholders.

 Corporación Chilena de la Madera (CORMA): Chilean timber association for the sustainable development of the Chilean forestry sector. CMPC promotes best practices and innovation.

• Centro de Envases y Embalajes de Chile (CENEM): This technical association promotes clean and collaborative production in containers and packaging. Coalizão Brasil Clima, Florestas e Agricultura: This organization looks to ensure Brazilian leadership on climate, forestry and agriculture by promoting synergies between the protection, conservation, sustainable use of natural and planted forests and climate change adaptation.

• Associação Brasileira Técnica de Celulose e Papel (ABTCP): This is a Brazilian association, where CMPC participates in the exchange of technical knowledge and best practices in the pulp and paper industry.

· Federação das Indústrias do Estado de São Paulo (FIESP): CMPC participates in this federation, supporting industrial and sustainability initiatives in the state of São Paulo.

· Business for Nature: The aim of this organization is to achieve a nature-positive economy by 2030.

· Pontificia Universidad Católica de Chile: Partnership with CMPC to promote research and innovation in sustainability and responsible forest management.

Universidad de Concepción de Chile: Collaboration focused on circular economy, technological development and training on sustainable forest management.

• Emerson and AspenTech: Partnership to implement artificial intelligence in plants in Chile and Brazil, optimizing pulp production and reducing energy consumption.

2024 INTEGRATED REPORT 343

## **Annual Directors** Committee Report

NCG 461 (3.3.iv)

During 2024, the Board Committee formally met 13 times to review and address matters that, in accordance with Article 50 bis of Law 18.046 on Public Limited Companies, are within its responsibility. The activities conducted by the Committee are detailed in this Annual Management Report.

The Committee reviewed the reports from external auditors, the balance sheet, and other financial statements presented by the company's management, prior to the board meetings where their approval was discussed, providing its opinion on these matters during those sessions.

The Committee analyzed the Consolidated Financial Position Statement of the Company and its affiliated companies as of December 31, 2023. The Committee also reviewed the report on these financial statements prepared by KPMG, the External Auditor designated by the shareholders for fiscal year 2023, which did not present any observations. All of this was reported at the annual shareholders' meeting held on April 25, 2024.

Additionally, the Committee reviewed the consolidated interim financial statements of the Company and its subsidiaries as of March 31, 2024. June 30, 2024, and September 30, 2024, prior to the board sessions where these financial statements were reviewed and approved. The Committee also proposed names to the Board for the designation of External Auditor and private risk rating agencies. To this end, the Committee supervised

the tender process for both functions at CMPC.

The Committee began the process

3.GOVERNANCE

of selecting the Company's external audit firm in January 2024. It invited E&Y, KPMG, BDO, Deloitte, and PwC to submit offers. The selection process included, among other activities. the presentation of proposals and the review of the professional teams potentially involved. The evaluation process considered various criteria, such as the qualifications and structure of the audit team; the total number of audit hours contemplated, and their distribution by professional category; local knowledge and presence; industry experience; and the transition plan, along with the firm's experience in prior engagements with CMPC.

After conducting the necessary analysis, the Committee considered that the most favorable proposals for the Company came from KPMG and EY, which stood out not only for their industry experience but also for the qualifications and experience of their proposed teams and partners. Furthermore, both firms were capable of providing a global service to CMPC, as they have a presence in all the countries where the Company operates. Therefore, the Committee agreed to propose these firms to the Board as options to be presented to the shareholders, with KPMG being prioritized due to the positive valuation of their work and the convenience of continuing the review process started in the previous year, as well as their more favorable economic offer. The Board accepted the recommendation and presented these options to the shareholders, who at the annual meeting on April 25 elected KPMG as the External Auditor for fiscal year 2024.

Regarding the control of the external auditors' work, the Committee held meetings with the External Audit Firm in January, July, and December 2024. These meetings reviewed the audit plan for the year, including the scope of annual services; the audit team; the audit approach; internal control analysis; fraud risk factors; and the audit plan's activity schedule for the year. Key reporting dates and considerations regarding independence and compliance with Law 20.382 were also discussed. Additionally, in these sessions, the progress of the audit and compliance with the proposed plan were reviewed, as well as the internal control recommendations made by the auditor.

The Committee also fulfilled its obligation to analyze and inform the Board regarding the appropriateness of contracting the designated External Audit Firm for the provision of services not included in the audit, as long as such services are not prohibited under Article 242 of Law 18.045, considering whether the nature of these services might pose a risk to the auditor's independence under the applicable regulations.

In the October meeting, the risk rating agency Fitch Ratings made a presentation to the Committee, which reviewed their classification procedures, their view of CMPC, and the rationale for the classification.

Similarly, in the October meeting, Humphreys Risk Rating also made a presentation to the Committee, addressing the same issues, with particular focus on the Company's ability to pay, a key element in their rating.

Concerning related party transactions, the Committee analyzed the transactions referred to in Title XVI of Law 18.046 on Public Limited Companies during all sessions held throughout the year.

Regarding the operations of CMPC subsidiaries, which are exempt due to being customary and ordinary to the company's line of business, as established in the company's customary policy approved by the Board, the Committee was informed of the annual budget approvals for each of these subsidiaries. It verified compliance with the defined parameters and recommended their approval to the Board. Throughout the year, these transactions were periodically reviewed by the Committee in line with the aforementioned annual approvals. The Committee also reviewed, verified, and recommended the approval of any other related-party transaction presented and exempt from the ordinary approval procedure as per the legal regulations.

As for related-party transactions that require submission to the ordinary approval process under Title XVI. the Committee reviewed and recommended the following transactions:

In its April 2 session, the Committee reviewed a request for the renewal of a personal accident insurance policy for executives, supervisors, and forestry brigadiers, covering a universe of 2,800 insured individuals with coverage ranging from UF 1,000 to UF 30,000. This policy has been in force with Bice Vida since 2019. The Committee reviewed the bidding process. the offers received from various invited companies, with Bice Vida's offer being substantially lower than the others and recommended its renewal.

In the June 4 session, the Committee reviewed an update on the proposal to sign a confidentiality agreement with Colbún to exchange information on three wind projects in CMPC's portfolio at different development stages, in order to analyze the viability and the most effective development mode, either internally or in partnership with a third party, considering capital restrictions and the necessary expertise for such activities. Given the nature of the information and the risk to the projects' development if the information were made available to multiple mar-

On July 30, the Committee reviewed a request for the sale of two parcels of land to Forestal Arauco. The land, totaling 2.02 hectares, is located in Yungay. The reason for the sale was that these parcels are located within a larger parcel owned by Forestal Arauco and are 5 kilometers away from another CMPC property, making forestry operations costly. The land has a pine plantation from 1983. The price offered by Forestal Arauco is \$66.000, which is higher than the external appraisal and the internal valuation. The Committee recommended approval of the sale based on these considerations.

In the same session, the Committee reviewed a request to authorize a construction and maintenance agreement for roads with Forestal Arauco. CMPC's forestry operations in the Cunco area use local roads to transport wood. Considering future operational plans and a community request to avoid increased truck traffic, the construction of a bypass was planned according to Ministry of Public Works standards. As these works would also benefit Forestal Arauco, the company was proposed to cover 50% of the construction and maintenance costs. The Committee recommended approval of the agreement.

On October 1, the administration reported that in October 1999, an agreement was made to grant Electricidad Industrial S.A. (now Colbún) easements for electricity transmission from the Carena Power Plant through CMPC's Puente Alto Complex and the Maipo-Puente Alto transmission line (LAT). The agreement stipulated that the company would operate and maintain the line. The administration reported that Colbún decided to terminate these easements and requested authorization to finalize the agreement. The Committee recommended granting authorization.

8.ESG INDICATORS

9.VALUE CREATION

10.APPENDICES

ket players, the Committee recommended not proceeding with an open tender and authorized management to explore a potential sale to Colbún.

In the November 5 session, the administration discussed renegotiating the financial debt covenant to 0.8 times, allowing more flexibility. It was proposed to hire three of the most experienced advisors in this type of operation, including Banchile, BiceChileconsult, and Link. Given that two of these companies have connections with Board members, the Committee authorized their hiring based on their experience.

On December 4, the Committee reviewed and approved a donation to the Society for Primary Education, equivalent to 1 UF per student enrolled, totaling UF 22,610. This donation is part of a long-standing commitment by the CMPC Board and is seen as beneficial to the social interest of supporting the institution's work.

In the same session, the Committee reviewed the mobile phone service bidding process, covering 4,150 phone lines and associated data. The contract, which had been renewed with Entel since 2020, was restructured by dividing service zones to encourage participation from all industry players. The result was a two-year contract for all CMPC subsidiaries, leading to a savings of USD 104,000. The Committee recommended awarding the contract to Entel for its competitive offer and better connectivity.

Additionally, the Committee reviewed the bidding process for sulfuric acid supply. The required volume of 81,000 tons included 15,000 tons from Enap. with the remainder to be supplied by Anglo American. Given that Enap has a board member in common with CMPC. the Committee recommended proceeding with the supply arrangement as it was the most beneficial proposal.

The details of these transactions are presented in note No. 37 of the Company's consolidated financial statements.

Regarding remuneration and compensation systems, the Committee reviewed the systems for managers, executives, and workers in January and March sessions.

#### April 25, 2024, Santiago

Pursuant to the provisions of Article 9 and Article 10, second paragraph of Law No. 18,045 of the Securities Market Law and the instructions contained in General Standard No. 30, as duly authorized. I hereby inform you as essential information that the 105th Annual General Meeting of this Company, held today, adopted the following resolutions, among others:

1. Approve the Balance Sheet, Financial Statements and Annual Report for 2023:

2. Distribute a final dividend No. 283 against the distributable net profit for 2023, in the amount of USD 0.0237113 per share, to be paid as of May 8, 2024. to the holders of shares registered in the Company's Shareholders' Registry at midnight on May 2, 2024;

3. Take cognizance of the dividend policy set by the Board of Directors for 2024, which consists of the distribution of 30% of the distributable net profit for the year ended December 31, 2024, through the distribution of two interim dividends to be determined by the Board of Directors, payable approximately in September and December 2024 or January 2025, and a final dividend to be determined at the Annual General Meeting, which will review the financial statements for 2024, payable on the date agreed at that meeting; and 4. Appoint the external audit firm KPMG Auditores Consultores SpA as external auditors of the Company for 2024.

#### April 29, 2024, Santiago

Pursuant to the provisions of Article 9 and Article 10, second paragraph of the Securities Market Law, I hereby inform you as essential information that on this date CMPC signed a protocol of intentions with the State of Rio Grande do Sul, Brazil, to make progress on the assessment of a comprehensive project that will include a new cellulose plant to be located 15 kilometers from the city

of Barra do Ribeiro in the abovementioned State.

The project, called Natureza, has a comprehensive concept that combines industrialization, road and port infrastructure, sustainable associative forestry, conservation and cultural promotion, and involves the construction of a factory to produce up to 2.5 million tons of short-fiber bleached hardwood kraft pulp (BHKP) annually, with the possibility of subsequent expansion, under the highest global standards of environmental protection, efficiency and quality.

In line with the agreed protocol, CMPC submitted permit applications for various monitoring activities to the Fundação Estadual de Proteção Ambiental Henrique Luis Roessler (FEPAM). the technical agency of the Rio Grande do Sul State Environmental Protection System. Specialized teams will develop the technical studies and environmental assessments necessary for the final preparation of the industrial project which, if all permits and authorizations are obtained, will be presented to the CMPC Board of Directors in mid-2026.

If approved, the project would involve an investment of approximately USD 4 billion for the new industrial unit, in addition to USD 420 million in various road infrastructure works and USD 150 million for the development of a new port terminal in Rio Grande, as well as an expansion of the port terminal currently in use. At this time, it is not possible to determine the economic impact of this decision.

#### May 09, 2024, Santiago

Pursuant to the provisions of Article 9 and Article 10, second paragraph of the Securities Market Law, I hereby inform vou as essential information that at its ordinary meeting held today, the Board of Directors was informed of the resignation of Mr. Jorge Matte Capdevila as Director

The Board thanked Mr. Matte for his valuable service as Director of CMPC throughout his tenure as a Director.

August 29, 2024, Santiago Pursuant to the provisions of Article 9 and Article 10, second paragraph of the Securities Market Law, as duly authorized, I hereby inform you, as essential information of Empresas CMPC S.A. (the "Company"), of the following:

The Board of Directors of the Company agreed to approve the new General Customary Transactions Policy of Empresas CMPC S.A., in accordance with letter b) of Article 147 of Law No. 18,046 on Corporations, Articles 171 and 172 of the Regulations of the Corporations Law and the provisions of General Standard No. 501 of the CMF.

The new General Customary Transactions Policy-which replaces and supersedes the previous policy—is effective as of September 1, 2024, and will remain available at the Company's corporate offices and on the Company's website https://www.cmpc.com/ politicas-y-normas-corporativas/.

#### September 05, 2024

Pursuant to the provisions of Article 9 and Article 10, paragraph two of the Securities Market Law, I hereby inform vou as essential information that at today's meeting, the Board of Directors of Empresas CMPC S.A. ("the Company") agreed to distribute an interim dividend No. 284 of USD 0.0168 (zero point zero one six eight United States dollars) per share, effective September 26, 2024, to be charged against the Distributable Net Profit for 2024.

This dividend may be paid in Chilean pesos or US dollars as required by shareholders, in accordance with the procedure set forth below:

G INDICATORS

9.VALUE CREATION

10.APPENDICES

1) Shareholders who choose to receive the interim dividend payment in US dollars must expressly request it to the Company through a request sent to the Company's Shareholders Department by e-mail to acciones@cmpc.cl no later than the fifth business day prior to the dividend payment date. In this request, shareholders must indicate the details of the bank checking account in US dollars into which they wish to receive the deposit of the dividend. Shareholders who do not request payment of the

dividend in US dollars in the manner and at the time indicated above will be deemed to have chosen to receive dividend payment in Chilean pesos.

2) Shareholders who have not requested payment in US dollars will receive payment in its equivalent in Chilean pesos at the Observed Dollar exchange rate published by the Chilean Central Bank for the fifth business day prior to the dividend payment date, which will be duly informed by the Company through a publication made on the same day on its website www.cmpc. com. This payment may be made by deposit in a bank checking account in Chilean pesos or by uncrossed nominative bank check in the name of the shareholder, sent by physical mail to the address that the shareholder keeps on file in the Company's Shareholders' Registry, at the choice of the shareholder, which must be communicated to the Company's Shareholders Department at acciones@cmpc.cl.

In the event that shareholders have not instructed the Company on any form of payment as indicated above, their dividend will be available to be paid in Chilean pesos as of the date notified for payment of the dividend in guestion, in which case the shareholder must contact the Company's Shareholders Department to instruct the form of payment in Chilean pesos that they choose in accordance with the provisions of letter b) above.

#### September 30, 2024

| <ul> <li>Operational incidents affecting<br/>the environment.</li> <li>Penalties for environmental<br/>non-compliance.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                               | The operation of industrial plants entails the risk<br>of incidents with environmental and/or commu-<br>nity repercussions, especially if operating pa-<br>rameters deviate from established ranges. The<br>occurrence of operational incidents or acci-<br>dents with environmental consequences could<br>result in penalties, stoppage of operations and<br>damage to the Company's reputation.<br>Failure to comply with environmental regula-<br>tions in all countries where the Company op-<br>erates can generate additional costs that affect<br>business profitability.<br>In Chile, the law on economic crimes and<br>environmental violations includes polluting<br>events and aspects related to obtaining en-<br>vironmental permits. This law requires the<br>completeness and veracity of the information<br>provided to the authority to prove compliance<br>with obligations. It also establishes the obliga-<br>tion that water extraction be carried out with<br>legally constituted rights. | CMPC manages people, processes and facilities to<br>prevent operational incidents with potential environ<br>mental consequences and to identify opportunitie<br>for improvement. It also has methods to deal wite<br>emergency situations and processes to trace cause<br>es to their origin and implement corrective action<br>to minimize the impact and help prevent recurrence.<br>These guidelines also ensure the responsible use of<br>renewable natural resources. In addition, it has insur-<br>ance coverage that transfers a substantial portion of<br>the civil and environmental liability risks.<br>In terms of environmental compliance, the Compa-<br>ny has processes and protocols in place that enabl-<br>it to comply with applicable laws and regulations. I<br>addition, it has adopted more demanding compliance<br>standards than those established in local regulations<br>which has allowed it to adapt and comply with regu-<br>latory changes in a timely manner. |

|                                                                               | On the other hand, globalization facilitates the<br>spread of viral diseases in the form of epidemics<br>or pandemics, which can have adverse effects on<br>workers' health.                                                                                                 | cialists, both in the different production plants and in<br>forestry operations. In addition, it establishes inter-<br>nal protocols that guide its actions in the event of a<br>health crisis.                                                                                                                        |

| 5  | sets and logistics chains                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|----|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|    | The Company uses equipment whose criticality<br>is fundamental for the production of products and<br>whose failure could affect the operational continuity<br>of industrial plants. This could result in an opera-<br>tional incident or accident that significantly affects<br>the health and safety of workers, as well as the en-<br>vironment, communities and the Company's repu-<br>tation.<br>While internal failures could cause explosions or<br>industrial fires, there are also external factors that<br>can generate them, such as natural phenomena or<br>intentionally provoked events.<br>Natural disasters and pandemics are events whose<br>cause is not manageable by companies. Global<br>warming, for example, can lead to an increase in<br>the frequency of acute natural events, which could<br>significantly impact the continuity of operations,<br>generate shutdowns, affect production targets and<br>make it difficult to meet customer needs. These<br>can also imply unscheduled expenditures for asset<br>maintenance and recovery, which would negatively<br>affect financial results.<br>Products marketed in several countries make the<br>company dependent on local and international lo-<br>gistics chains. Any interruption to this chain could<br>affect the level of inventories in the warehouses and<br>in the event of prolonged interruptions could even<br>jeopardize the supply to customers for a certain pe-<br>riod of time.<br>From a regulatory standpoint, Chile's economic<br>crime law criminalizes smuggling of goods, false<br>customs declarations and customs fraud. | <ul> <li>CMPC manages various operational risks through strategies and protocols focused on mitigating impacts and maintaining operational continuity:</li> <li>1. The Company maintains strict maintenance standards and objectives to avoid equipment obsolescence, minimizing the risk of operational failures. It implements emergency plans focused on worker safety and business continuity plans to protect assets and ensure operations in the event of failures. In addition, the company maintains insurance policies that enable it to transfer a significant portion of its industrial risk, mitigating the financial impacts derived from possible failures.</li> <li>2. Because CMPC markets its products in several countries, it relies on logistics chains that include trucks, trains, barges and ships. Any interruption to these chains could affect stock levels and compromise supply to customers if prolonged.</li> <li>For this reason, CMPC has implemented alternatives that increase flexibility and enable it to face diverse scenarios. This includes the ability to adapt its logistics to circumstances. It has established continuity plans that include the maintenance of stock at different points in the supply chain, including warehouses close to customers.</li> <li>3. The Company manages regulatory risks through clear processes and protocols that ensure compliance with current regulations and mitigate any risks associated with legal and regulatory issues.</li> </ul> |

| Quality issues in products<br>marketed directly to<br>customers that could have an<br>impact on consumer health<br>and safety. | Any situation that puts the health and safety of con-<br>sumers at risk is considered a high impact risk. If it<br>arises, Softys could face fines, penalties, customer<br>complaints and recall costs, which would negatively<br>impact the Company's reputation, consumer confi-<br>dence and sales of its products. | To avoid the materialization of these risks, Softys ad-<br>dresses production processes with standardized man-<br>agement and a preventive approach that considers<br>control systems at each operational stage:<br>1. Raw materials must meet critical quality specifica-<br>tions that are verified for each delivery, considering<br>that the Company only works with approved suppliers;                                                   |
|                                                                                                                                |                                                                                                                                                                                                                                                                                                                        | 2. Corporate production standards are in place to<br>ensure that products have consistent characteristics<br>within the limits defined for their particular attributes,<br>and the process is audited by the Quality Department<br>at each subsidiary;                                                                                                                                                                                         |

### Patents and licenses

NCG 461 (6.2.vi, 6.2.vii)

CMPC does not own franchises or licenses. The organization's most relevant patents are related to the products it markets.

#### CMPC's main patents as of 2024

| Patent                                                                                                                                                                                                                                                                                                                               | Industrial Sector    | National or International |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|---------------------------|
| Celulosa                                                                                                                                                                                                                                                                                                                             |                      |                           |
| Packaging for bales of cellulose sheets, consisting of cellulose sheets wrapping a bale by interlacing cellulose sheets where an inner sheet of the packaging is held by an outer sheet whose ends are inserted between this inner sheet and the bale holding the packaging in a self-supporting manner by the pressure of the bale. | Cellulose production | National                  |
| Biopackaging                                                                                                                                                                                                                                                                                                                         |                      |                           |
| Assemblable cardboard pallet comprising a first plate located at the top of the pallet, a second plate located at the bottom of the pallet which is in contact with the floor, with groups of grooves in both the first and second plates and multiple cardboard pillars made from a third plate; and assembly method.               | Paper production     | National                  |
| Corrugated cardboard box for the transportation of fresh products, which has<br>improved insulation and sealing properties and facilitates the use of adhesive strips<br>in the final sealing process of the box.                                                                                                                    | Sale of packaging    | National                  |
| Easy open/empty sack.                                                                                                                                                                                                                                                                                                                | Sack sales           | National                  |
| Softys                                                                                                                                                                                                                                                                                                                               |                      |                           |
| Disposable Female Sanitary Pad.                                                                                                                                                                                                                                                                                                      | Personal Care        | International             |
| Ornamental Embossing Type Pattern To Be Used On Absorbent Articles.                                                                                                                                                                                                                                                                  | Consumer Tissue      | International             |
| Tissue Paper Product With Increased Strength, Softness And Absorption, Manufactured From Cellulose Pulp Microfibrils.                                                                                                                                                                                                                | Consumer Tissue      | International             |

3.GOVERNANCE

#### Expenditure on suppliers by category (MMUSD)

GRI (204-1)

| Categories                                     | 2020  | 2021  | 2022  | 2023  | 2024  |
|------------------------------------------------|-------|-------|-------|-------|-------|
| Expenditure on local suppliers                 | -     | 462   | 811   | 1,300 | 6,363 |
| Expenditure on MIPYMES suppliers               | 837   | 847   | 976   | 1,080 | 739   |
| Expenditure on national suppliers              | -     | -     | 5,370 | 6,156 | 5,453 |
| Percentage of expenditure on local suppliers   | -     | 9%    | 12%   | 18%   | 29%   |
| Percentage of expenditure on MIPYMES suppliers | -     | 17%   | 15%   | 15%   | 12%   |
| Total expenditure on suppliers                 | 4,583 | 4,879 | 6,497 | 7,083 | 6,363 |

Note 1: The sum of national and international suppliers does not add up to the total number of suppliers, as there are suppliers that provide services to more than one business. Note 2: National suppliers are those that operate in the same country as the subsidiary. Note 3: If a supplier is considered strategic and works for more than one subsidiary, for the purpose of the total, that supplier is considered part of the subsidiary to which they bill the most.

## **CMPC Commitments in line** with the Kunming-Montreal **Global Biodiversity Framework** (MGBK-M)

GRI 101-1

#### **Objective A: Ecosystem Protection** and Restoration

porate Strategy, supported by a corpo- cies. rate roadmap.

species: Implementation of biological corridors for Pitavia punctata (Pitao) and Nothofagus alessandrii (Ruil), endemic ecological restoration efforts. species declared Natural Monuments. 3. Patagonia CMPC Conservation Project: Allocation of 26,000 hectares for conservation, restoring native vegetation and managing ecosystem services. 4. High Conservation Value Areas (HCVAs): Creation and management of completed by 2025, ensuring the inteareas for the protection of species under conservation.

5. Expansion of conservation and pro- 2. Collaborative work for the conservausing 2018 as the baseline year.

strengthen key biodiversity areas in Chile.

#### **Objective B: Sustainable Use and Ecosystem Services**

1. Valuation of Natural Capital: Identification and strengthening of ecosystem services on CMPC properties.

2. Water management for communities: Management and monitoring of 400 water catchments, benefiting more than 50,000 people in rural areas. 3. Non Timber Forest Products (NTFP): Implementation of a sustainable harvesting strategy and training for local communities.

4. Support for local entrepreneurs: Strengthening the formalization, innovation and commercialization of NT-FPs, with a showcase in CMPC's Primeros Pueblos stores.

5. Bosque Vivo Project: Creation of four parks in Angol, Temuco, Loncoche and Coyhaigue, promoting education and recreational use of the forests.

#### **Objective C: Species Conservation**

1. Assisted migration of Araucaria araucana: Collaborative project with public and private actors for its preservation in the Nahuelbuta mountain range. 2. Araucaria araucana genome se-

guencing: Publication of their genetic information on scientific platforms to facilitate research and conservation. 3. Assisted migration of Nothofagus ales-1. Nature Neutral as of 2023: Incorpo- sandrii: Development of a project in 2024 ration of this objective in the 2030 Cor- for this endemic and endangered spe-

4. Propagation techniques for resto-2. Biological corridors for endangered ration: Implementation of strategies to improve the multiplication of plant material of key species, strengthening

#### **Objective D: Conservation Education** and Participation

1. Internal training and development: Implementation of a training plan for CMPC's Bosques business area, to be gration of the NC&B Strategy into the business.

tection: Increase of 100.000 hectares tion of the Ruil: Participation on the Ruil of conservation or protection by 2030, round table, a public-private initiative in the Maule Region for the preservation of 6. Participation in national biodiversi- native forests and the management of ty plans: Contribution to initiatives that restoration and environmental education.

> These commitments reflect CMPC's comprehensive approach to biodiversity protection, the sustainable use of natural resources and the integration of communities in environmental conservation.

#### Educational programs

Criando y Creciendo program The program strengthens parental skills to enhance the socio-emotional and linguistic development of children.

and "brain in hand" (Siegel and Payne) to improve their interactions. In 2024, the program expanded to the municipality of Tucapel, consolidating its presence in 12 municipalities. Additionally, an agreement with JUNJI Biobío included families from five kindergartens and daycare centers in Laja,

Nacimiento, Mulchén, and Tucapel.

Through workshops, families learn

strategies based on the FIND models

The Impact Evaluation Seminar of Criando y Creciendo was held at the Pontifical Catholic University, where CMPC and UC authorities presented the results to academics and representatives of foundations and social organizations. These results were also presented at the XVII International Congress on Education and Innovation.

9.VALUE CREATION

| Indicator                                                                                                       | Page             |
|-----------------------------------------------------------------------------------------------------------------|------------------|
| Proportion of all forests owned, leased, and managed certified (%)                                              | 252              |
| Proportion of total land owned, leased, or managed designated for restoration or conservation (%)               | 261              |
| Total hectares of land (not owned, leased, or managed) restored or conserved                                    | 261              |
| Total number of small landowners reached through support programs                                               | 254              |
| Nature-related objective(s) with measurable targets identified on a timeline (Y/N)                              | 257              |
| Percentage of total income invested in R&D (%)                                                                  | 103              |
| Percentage of process waste and waste reused from total waste generated (%)                                     | 297              |
| Percentage of recycled fiber from total fiber used (%)                                                          | 454              |
| Application of circular design principles or guidelines to maximize product recovery potential (Y/N)            | 95               |
| Collaborations to increase recovery of wood fiber products (Y/N)                                                | 295, 296,<br>448 |
| $CO_2$ equivalent emitted per saleable product (mt $CO_2$ eq)                                                   | 273              |
| Percentage of renewable energy out of total energy consumed (%)                                                 | 278, 279         |
| $\mathrm{CO}_{_2}$ reduction targets set over time and verified, aligned with climate science (Y/N)             | 268              |
| Inclusion of Scope 3 emissions in the reduction target (Y/N)                                                    | 268              |
| Total number of seedlings grown in nurseries                                                                    | 258              |
| Total number of trees planted                                                                                   | 258              |
| Percentage of seedlings grown that were sold or donated (%)                                                     | 250              |
| Water extracted per ton of saleable production (m <sup>3</sup> )                                                | 287              |
| Proportion of water returned per ton of saleable production (%)                                                 | 298              |
| Chemical oxygen demand (COD) per ton of saleable production (kg)                                                | 298              |
| Percentage of total water consumed in areas of high water stress (%)                                            | 282              |
| Percentage of manufacturing operations in high water stress regions with a water consumption reduction plan (%) | 282              |
| Percentage of water returned to the water source/supply/third parties                                           | s/i              |
| Proportion of female employees (%)                                                                              | 144              |
| Proportion of women in senior management (%)                                                                    | 148              |
| Numeric goal, with specific deadlines, on increasing inclusion and diversity (Y/N)                              | 148              |
| Average training per employee (hours per year)                                                                  | 164              |
| Total recordable incident rate (TRIR)                                                                           | 178              |

| Human Rights     |                                                                                                                                              |               |  |  |
| Principle 1:     | Companies should support and respect the protection of internationally recognized fundamental human rights within their sphere of influence. | 19, 64,77     |  |  |
| Principle 2:     | Companies should ensure that their partners and collaborators are not complicit in the violation of human rights.                            | 77            |  |  |
| Labor relations  |                                                                                                                                              |               |  |  |
| Principle 3:     | Companies should support freedom of association and the effective recognition of the right to collective bargaining.                         | 172           |  |  |
| Principle 4:     | Companies should support the elimination of all forms of forced or coerced labor.                                                            | 77 , 244      |  |  |
| Principle 5:     | Companies should support the eradication of child labor.                                                                                     | 77, 244       |  |  |
| Principle 6:     | Companies should support the abolition of discriminatory practices in employment and occupation.                                             |               |  |  |
| Environment      |                                                                                                                                              |               |  |  |
| Principle 7:     | Companies should take a preventive approach that favors the environment.                                                                     | 257, 266, 268 |  |  |
| Principle 8:     | Companies should encourage initiatives that promote greater environmental responsibility.                                                    | 257, 266, 268 |  |  |
| Principle 9:     | Companies should encourage the development and diffusion of environmentally friendly technologies.                                           | 111           |  |  |
| Anti-corruption  |                                                                                                                                              |               |  |  |
| Principle 10:    | Companies should work against corruption in all its forms, including extortion and bribery.                                                  | 236           |  |  |

10.APPENDICES

PRIMEROS PVEBLOS

Santiago, March 27<sup>th</sup>, 2025

#### Ms.

#### Verónica de la Cerda

#### Sustainability Director

Compañía Manufacturera de Papeles y Cartones

#### Present

At its request, DEUMAN has conducted a limited independent verification of the 2024 Greenhouse Gas emissions inventory of the Compañía Manufacturera de Papeles y Cartones (CMPC).

The inventory has been reported through spreadsheets, the SpheraCloud Corporate Sustainability platform, and a greenhouse gas emissions inventory calculation report. DEUMAN's responsibility is to issue conclusions on the consistency and reliability of the information received.

#### Scope

The calculated inventory corresponds to the emissions of 54 industrial plants and 3 forestry operations located in Argentina, Brazil, Chile, Colombia, Ecuador, Mexico, Peru, Uruguay and the United States, as well as the corporate offices.

The organizational limit was established following the operational control approach. The quantification corresponds to the period between January 1<sup>st</sup> and December 31<sup>st</sup>, 2024.

The scope considers the following activities per business unit of the organization:

Chile | Perú | Paraguay | Ecuador | Visítanos en www.deuman.com

| Category                                                         | Activities                                                                                                                                                                                 |  |  |  |  |
|------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|--|--|
|                                                                  | Combustion emissions from fixed sources (boilers, generators):<br>Diesel, gasoline, LPG, natural gas, fuel oil                                                                             |  |  |  |  |
| Scope 1: Direct GHG emissions                                    | Combustion emissions from mobile sources: Diesel, gasoline, LPG, aviation kerosene                                                                                                         |  |  |  |  |
|                                                                  | Emissions from combustion of renewable fuel: biomass, black liquor, methanol. Only $CH_4$ and $N_2O$ are considered, $CO_2$ of biogenic origin is not incorporated into the quantification |  |  |  |  |
| Scope 2: Indirect GHG<br>emissions caused by<br>purchased energy | Emissions from the purchase of electrical energy and steam                                                                                                                                 |  |  |  |  |
|                                                                  | Category 1. Purchased goods and services                                                                                                                                                   |  |  |  |  |
|                                                                  | Category 2. Capital goods                                                                                                                                                                  |  |  |  |  |
|                                                                  | Category 3. Fuel and energy related activities                                                                                                                                             |  |  |  |  |

|                                                                  | Category 9. Downstream transportation and distribution                                                                                                                                     |  |  |  |  |
|                                                                  | Category 10. Processing of sold products                                                                                                                                                   |  |  |  |  |
|                                                                  | Category 11. Use of products sold                                                                                                                                                          |  |  |  |  |
|                                                                  | Category 12. End-of-life treatment of sold products                                                                                                                                        |  |  |  |  |

In addition, upstream leased assets (category 8), downstream leased assets (category 13) and investments (category 15) are not relevant categories. On the other hand, franchises (category 14) are not applicable for the carbon footprint 2024.

The types of GHG considered were:  $CO_2$ ,  $N_2O$ ,  $CH_4$ , HFC, PFC, SF\_6.

#### Verification process

The objective of the process was to verify that the results reflected in the final Carbon Footprint report for the year 2024 of the CMPC company align with the GHG Protocol Corporate Accounting and Reporting Standard.

The verification was carried out in accordance with the ISO 14064 – 3: 2019 (es) Greenhouse gases - Part 3: Specification with guidance for the verification and validation of greenhouse gas statements as a reference guide for quality assurance.

The verification methodology consisted of the following activities:

Chile | Perú | Paraguay | Ecuador | Visítanos en www.deuman.com

9.VALUE CREATION

10.APPENDICES

- Interviews with those responsible for delivering information from 9 plants
- Consistency check between the activity level data included in the SpheraCloud Corporate Sustainability platform and the spreadsheets provided – and the corresponding backups.

3.GOVERNANCE

- Review of additional documents such as I-REC attribute purchase contracts.
- Review of the methodology and report of the emissions calculation.
- Analysis of the relevance of the emission factors used

#### The agreed level of assurance is limited.

Disclaimer and Declaration of no conflict of interest: DEUMAN is not responsible for the veracity of the information provided by third parties to CMPC. As a verifier, we consider that it has been provided according to the principle of good faith, having clarified the inconsistencies identified. For this reason, we make this declaration of independent verification, for which we express that we have no conflict of interest related to the verification process or its results with the company in question.

#### Conclusions

In accordance with the aforementioned scopes and limits, and based on the verification process described above, no discrepancies were identified in CMPC's declaration in relation to its Greenhouse Gas Emissions Inventory and it is also aligned with the GHG Protocol Corporate Accounting and Reporting Standard.

Empresas CMPC S.A. Report on Identified Sustainability Santiago, April 4, 2025 Page 3

#### Basis for conclusion

We conducted our engagement in accordance with International Standard on Assurance Engagements (ISAE) 3000 (Revised) issued by the International Auditing and Assurance Standards Board (IAASB). Our responsibilities under this standard are further described in the "Our responsibilities" section of our report.

3.GOVERNANCE

We have complied with the independence and other ethical requirements of the International Code of Ethics for Professional Accountants (including International Independence Standards) issued by the International Ethics Standards Board for Accountants (IESBA).

Our firm applies International Standard on Quality Management (ISQM) 1, Quality Management for Firms that Perform Audits or Reviews of Financial Statements, or Other Assurance or Related Services Engagements, issued by the IAASB. This standard requires the firm to design, implement and operate a system of guality management, including policies or procedures regarding compliance with ethical requirements, professional standards and applicable legal and regulatory requirements.

We believe that the evidence we have obtained is sufficient and appropriate to provide a basis for our conclusion.

#### **Responsibilities for the Information Identified**

Management of Empresas CMPC S.A. is responsible for:

- designing, implementing and maintaining internal control relevant to the preparation of the Information Identified such that [it is free from material misstatement, whether due to fraud or error;
- Selecting or developing suitable criteria for preparing the Information Identified and appropriately referring to or describing the criteria used; and
- Preparing the Information Identified in accordance with the Standard for Sustainability Reporting in the Global Reporting Initiative (GRI), the Sustainability Accounting Standards Board (SASB, General Standard - NCG (due to the Spanish acronym) N°461 (as amended by NCG N°519)) and own standards.

Those charged with governance are responsible for overseeing the reporting process for Empresas CMPC S.A.'s Information Identified.

#### Our responsibilities:

We are responsible for:

- Planning and performing the engagement to obtain limited assurance about whether the Information ٠ Identified is free from material misstatement, whether due to fraud or error;
- Forming an independent conclusion, based on the procedures we have performed and the evidence we have obtained; and
- Reporting our conclusion to the Company's Management. ٠

#### Summary of the work we performed as the basis for our conclusion

We exercised professional judgment and maintained professional skepticism throughout the engagement. We designed and performed our procedures to obtain evidence about the Information Identified that is sufficient and appropriate to provide a basis for our conclusion. Our procedures selected depended on our understanding of the Information Identified and other engagement circumstances, and our consideration of areas where material misstatements are likely to arise. In carrying out our engagement, the procedures we performed primarily consisted of:

- Information Identified.
- ٠ documentation provided by Management.
- Engagement with those presented in the 2024 Integrated Report.

The procedures performed in a limited assurance engagement vary in nature and timing from, and are less in extent than for, a reasonable assurance engagement. Consequently, the level of assurance obtained in a limited assurance engagement is substantially lower than the assurance that would have been obtained had a reasonable assurance engagement been performed.
